NO. 1.

## ARTS & SCIENCES

[From the "Miners' Companion and Guide," published by J. Silvermith, San Francisco, 1862. For sale by all booksellers throughout the Pacific States.]

On the Nature of the Deposits of the Metals and their Ores, and the General Principles on which Mining is conducted.

NO. III.

Intermediate between the regular and irregular deposits of the metalliferous ores are those forms of occurrence designated by the German word "Fahlband." These are more strikingly exhibited in Norway than elsewhere, although the same character has been recognized in other regions on a less extensive scale; and being in some respects peculiar, this mode of occurrence should not be overlooked in a review of the forms of metalliferous deposits.

The Fahlbands (German, Fahlband; plural, Fahlbänder), as developed in the district of the Kongsberg silver mines, consist of parallel belts of rock of very considerable length and breadth, which are impregnated with the sulphurets of iron, copper and zinc, together with a little lead and silver, disseminated through the rocks in such fine particles as to be hardly visible, and only to be recognized by their tendency to decompose, and thus to give the rock in which they are contained a peculiar rotten and disintegrated appearance at the surface; hence the name fahlband, or rotten belt, the word *fahl* being a corruption of *faul*, the miners' term for a rotten or decomposed rock.

In general, these ore-bearing belts are irregular in their dimensions, although constantly observing a certain degree of parallelism with each other. They may be traced in the Kongsberg silver-mining district for several miles, and the greatest depth of any is about a thousand feet. The quantity of ore contained in them is usually too small to be worth working; but occasionally it is sufficiently concentrated to become the object of mining enterprise. There are seven of these fahlbands in the vicinity of Kongsberg, and they are parallel in strike and inclination with the gneissoid and schistose strata in which they occur, and have the same local character in relation to disturbances of stratification, schistose structure, and other external forms.

The fahlbands, however, are themselves traversed by fissure veins bearing argentiferous ores, and the results of extensive mining have shown that these veins are only productive when they intersect the fahlbands, demonstrating that the impregnation of the lode with mineral matter was evidently dependent on the nature of the adjacent rock, and furnishing sufficient evidence that the metalliferous particles in the veins were originally derived from the fahlbands, and probably concentrated there by electro-chemical action.

This mode of occurrence will be recognized as peculiar in its character, being a combination of two distinct forms of metalliferous deposits; but the fahlbands themselves could be hardly considered of much importance, were it not for their enriching action on the lodes which traverse them.

The same fact is observed with regard to the enriching of fissure veins, when they traverse different beds of rock, even

in cases where no perceptible metalliferous particles can be observed in any of them, and when the fahlband structure may be supposed to be wholly absent. In such cases it is not unreasonable to suppose that a chemical examination of these beds, in which a lode shows itself to be better filled with ore than elsewhere, might reveal the existence of metalliferous particles, the presence of which had been previously unsuspected, because they were too finely disseminated through the rock, or were not of a nature to be easily decomposed, and so failed to give a marked external to the stratum in which they occurred. The fahlbands may be considered as approaching nearest to the class of segregated veins, which comes next in the class of metalliferous deposits given above, and to these, in connection with the other modes of occurrence to which the term "vein" is applied, we now turn our attention.

**Regular Deposits.—Segregated Veins, Gash Veins, Fissure Veins.**—The line of demarcation between the three forms of veins indicated above, cannot always be easily drawn, although in most cases the difference is very apparent, and in all is of great importance in judging of the value of a metalliferous deposit. But in some instances there is so gradual a passage from one form to the other, that surface examinations are not sufficient to enable one to decide the question of the actual existence of a fissure or true vein, and it is only by the indication obtained at some depth below the surface, that the vein can be placed in its proper class.

By a vein, as a geological and mining term, in general is understood an aggregation of mineral matter of indefinite length and breadth, and comparatively small thickness, differing in character from, and posterior in formation to, the rocks which enclose it.

Werner, the great Saxon geologist, defined veins as "mineral repositories of a flat or tabular shape, which traverse the strata without regard to stratification, having the appearance of rents or fissures formed in the rocks, and afterwards filled up with mineral matter differing more or less from the rocks themselves." This definition would exclude many veins which do not traverse, but run parallel with the strata, and others which occur in unstratified rocks. The definition given above, of course, includes veins of mineral matter not metalliferous, which are of frequent occurrence, but of no importance in the present connection.

Weissenbach, in a paper published in Cotta's "Contributions to the Knowledge of Mineral Veins," which is especially devoted to the subject of the metalliferous lodes of Saxony, has given a general classification of all the modes of occurrence which can be brought under the head of veins. He divides them as follows:

1. **Veins of Sedimentary Origin.**—Where a fissure has been filled from above by deposition of mineral matter, in a manner similar to that in which the sedimentary rocks themselves have been formed. The origin of these is exceedingly simple, since it is evident that in the process of deposition of any of the stratified masses, as of sandstone or limestone for instance, if this operation were going on in a region where open fissures existed in the subjacent rock, they would be filled by the sedimentary matter, which would assume a stratified appearance in the fissure exactly as above it. The matter thus deposited would not properly be a metalliferous ore, since this class of products have a chemical not a mechanical origin. This is perfectly evident, and it cannot fail to strike one with surprise that a theory so inconsistent with facts should have been adopted by Werner to account for the formation of metalliferous veins. The whole class of veins of sedimentary origin is of little importance.

2. **Veins of attrition.**—Fissures filled with matter introduced by purely mechanical means, such as by fragments of the wall rock falling from above, or produced by friction of their sides against each other. These phenomena are exhibited in many ore-bearing veins, in the formation of which a two-fold action was concerned.

3. **Veins of infiltration, or stalactitic veins.**—These result

from the filling of fissures by incrustation of the sides with calcareous matter deposited from aqueous solution, in the manner of stalactites so common in caverns.

4. **Plutonic Veins.**—Fissures filled with mineral matter, identical with that of rock formations, or mountain masses and supposed to have been introduced by injection, or pressure from beneath upwards, while in a plastic state. Such are the common granite veins in granite or slate.

5. **Segregated Veins.**

6. **Metalliferous Veins, proper.**

These two latter classes are included in the class of regular, unstratified mineral deposits, as previously shown in the table of mineral formations; the latter division including both gash and fissure veins; and they are the only ones which are of importance in the consideration of the metalliferous veins.

**Segregated Veins.**—Under this class of metalliferous deposits are included those vein-like masses which have a crystalline structure, or, at least, a gangue differing from the adjacent mass, but which do not seem to occupy a previously existing fissure in the rock, being so enveloped and limited on all sides within it, as to show that the metalliferous and mineral substances of which they are made up could not have been introduced into their present position in any other way than by a gradual elimination of their component particles from the surrounding formation. Their process seems to have been of a chemical nature, and one by which materials of similar character were collected together from all directions, or segregated, as it is termed. Of the conditions under which the adjacent rocks must have been when such an elimination of their metallic contents took place, we know little with certainty. We see, however, examples of segregation in masses of lava, as they cool from a state of igneous fluidity, when crystals of the different mineral species found in such rocks are found to have crystallized out into distinct individuals, from what was before an apparently homogeneous paste. The same is true of granite and the trappean rocks. In the former, the single crystals sometimes attain the length of several feet. If circumstances cause the segregating crystals to imitate an elongated mass, we have at once the rudimentary form of a vein-like mass, which may continue to develop itself and acquire considerable dimensions. A tendency to this separation of pure quartzose material will be noticed in almost all of the so-called metamorphic rocks, which frequently show bands of pure quartz, parallel with each other, and lying in the plane of stratification of the enclosing rock; and it should be noticed that quartz is almost universally the veinstone of ores occurring in this form of deposit.

These segregated veins differ from true veins in some important respects. In the first place, they lie parallel with the

Fig. 3.

a.—Segregated mass of ore cropping out at the surface.  
b.—Parallel layer not extending upwards so far.

cleavage planes of the formation in which they occur, which is the gneissoid and schistose portion of the metamorphic paleozoic rocks. The annexed wood-cut (fig. 3) represents an ideal section of the form of deposit here under consideration. The ore-bearing mass may or may not appear at the surface; but its extent downwards in one plane is not to be relied upon as in case of a fissure vein, since the accumulation is liable, at any point, to be found thinning out in depth, and transferred to another plane as represented in the figure.

A striking illustration of this form of deposit may be seen in the Rammelsberg, one of the most celebrated localities of the Harz, a section of which is given in the annexed cut (fig.

Fig. 4.

Section of the Rammelsberg.

dimensions decrease in depth, and at 800 feet its thickness is about 20, and its length 750 feet; so that there can be little doubt that the mass will terminate entirely at a certain not very great depth. The ores of this singular mass are chiefly sulphurets of iron, zinc, lead and copper, intimately blended together, and almost entirely destitute of gangue.

The auriferous quartz veins of most gold regions belong to this class of deposits. They consist of belts of quartzose matter with sulphurets of iron, which near the surface is decomposed into a hydrated oxide, and contain gold disseminated through these substances, and sometimes in the adjoining rock, in fine particles, or occasionally, large lumps. These belts run with the strata and dip with them, and in other respects exhibit the phenomena of segregated rather than of fissure veins.

Practically, the most important feature of this class of deposits is that they cannot be depended on in depth as true veins; as they seem almost always to be richest near the surface, and frequently terminate altogether at no very considerable depth. Nor is the ore or metal matter distributed through them with as much regularity as in the true veins, forming often a series of nests and pockets ranged in a general linear direction, and connected by mere threads of ore or barren veinstone.

**KRUPP'S CAST STEEL TYRES.**—Two of these tyres have been loaned to Mr. Krupp by the North London Railway Company, and are placed in the Exhibition, with his magnificent show of 100 tons of cast-steel cannon, axles, tyres, crank, intermediate and other shafts, together of the value of \$90,000.

The tyres above referred to have run sixty-seven thousand miles, and do not yet require turning. The road is very severe upon tyres, and the engines are of the heaviest class, and continually under the brake, the stoppages averaging about every mile.

Here is an extract from a report made to the Board of Directors by their engineer, dated April 14, 1862: "The engines of this line run one million miles per annum, in round numbers, and this mileage performed by Krupp's tyres would cost £733 6s. 8., while by the Low Moor tyres the cost would be £2,087 10s."

The average thickness of the tyres is 2.21 inches, and Krupp's are calculated to be worn down to one inch before they are discarded. To run 189,539 miles will require one set of Krupp's tyres, four times turned, at a cost of £139, or six sets of Low Moor, twelve times turned, at a cost of £396, without making any allowance for the value of the old metal—which is greatly in favor of Krupp's. The cost, therefore of running one thousand miles is 14s. 8d. by Krupp's, and £2 1s. 9d. by Low Moor tyres, showing a saving of 65 per cent.

It is a remarkable fact that the Belgian steel is even in-

ferior to iron, showing clearly that the quality of Krupp's steel, and not the mere fact of his tyres being steel at all, is the important consideration.—*American Railway Review.*

### GIRD'S BUDDING KNIFE.

The accompanying illustration, executed at this office, represents Mr. E. D. GIRD'S BUDDING KNIFE, a most invaluable invention for the Pacific States. Mr. J. Silversmith, of San Francisco, has been authorized to dispose of the right for States, Territories and counties for the Pacific Coast only.

This invention is one of the many California has thus far produced, and is certainly deserving of her, it being the most useful and practicable for the purposes designed. The horticulturist who once adopts this knife will find its value so evident that ever after its services will be indispensable, since with it much labor and expense are saved. In speaking of it the *Scientific American* says:

"The above engraving illustrates a knife which is calculated to facilitate materially the process of budding. Upon

the ends of the blades are formed crescent-shaped crosses of steel with fine edges for cutting the T-shaped slit in the bark of the tree to be budded. These blades with their crosses are made of different sizes, so that some one of the three may be adapted to the size of the tree to be operated upon.

"It is the practice of some horticulturists to remove the bit of wood which is cut from the scion with the bud, and to insert the bark only with the bud. To save this operation, the round blade is formed with several curves in its edge, so that it will cut the bark alone from the scion without taking off the bit of wood, the curves being of different radii to adapt them to scions of different sizes.

"With this knife several operations are reduced to one, and the process of budding is greatly facilitated. The crescent-shaped cross is pressed through the bark making the transverse cut, and then by simply carrying the knife down, the vertical slit is made, and the bark is raised at the same time ready to receive the bud. This knife was used in California during the last season, for budding several thousand trees, and it gave great satisfaction to the operators."

Those desiring to purchase will please address Julius Silversmith, San Francisco, respecting terms, &c.

### NEW ADVERTISEMENTS.

#### LATEST IMPROVEMENT

### In LADIES' BUCKLES.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address,  
FREDERIK REICHEL,  
Manufacturing Jeweler,  
sept11 620 Merchant street, San Francisco.

### SEWING MACHINES

AT PRICES WHICH BRING THEM WITHIN THE REACH OF ALL!

THE

### NEW ENGLAND SEWING MACHINES for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Gauge and hammer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.

STEWART & SHEAR, General Agents,  
sept11 No. 60 Second street.

### Gird's BUDDING KNIFE

THE ATTENTION OF FARMERS, HORTICULTURISTS AND CUTLERS, OR manufacturers of Horticultural Implements, are referred to the above invention. For description and engraving see MINING AND SCIENTIFIC PRESS No. 24, vol. v.

## GENERAL FOUNDRY ESTABLISHMENT AND MACHINE WORKS.

### PALMER, HANSCOM & CO., Proprietors.

Golden State Foundry, First street, near Market, San Francisco.

#### KNOX'S LATE IMPROVED AMALGAMATOR.

(Manufactured and for sale at the Golden State Foundry, San Francisco.)

Palmer, Hanscom & Co., proprietors of the above well established and favorably known works, throughout the Pacific States, desire to call the attention of mining companies, mill owners, and others requiring machinery of any description, to the fact that they are enabled to execute any and all orders of whatever nature at the shortest notice, and at GREATLY REDUCED PRICES. Their works are the most complete in their appointments on this coast. These gentlemen guarantee entire satisfaction to all who may favor them with their patronage.

Mining machinery, such as crushing mills and improved Knox's Amalgamators, (the best for extracting the precious metals) kept constantly on hand and manufactured at the shortest notice.

Send drawings and specifications for estimates, and address,

PALMER, HANSCOM & CO.,  
Golden State Foundry,  
San Francisco, Cal

CORNS AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my specialty for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir,—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important, but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

Rev. W. Stanton, L.L.D.,  
Richard A. Vaux,  
Dr. Straub, M.D.,  
Dr. Loomis, M.D.,  
Cleopole Stevens, M.D.,  
Samuel Pincost, M.D.,

From Dr. W. L. Stevens: Dr. Kennedy has operated upon my feet, and has effectually cured me of some torturing pests that I have been annoyed with for years.

From the Rev. Walter M. Thompson: This is to certify that while sojourning in Philadelphia, Dr. Kennedy has operated on three of my family to my entire satisfaction.

From the Hon. Wm. M. Thorne, ex-member of the Ohio Legislature: This is to certify that I called on Dr. Kennedy to operate on my feet: He displayed great skill as a surgeon, and I am satisfied that he has effectually cured me of those torturing pests which have annoyed me for many years.

From Geo. F. Omerly, 837 Arch street: This is to certify that I called on Dr. Kennedy. He has operated on my feet to my entire satisfaction. au21

50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

DIRECTIONS:  
For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.  
For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

DIRECTIONS:  
HOUSE—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.  
ROOF—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye.

How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14

Very Important to the Afflicted.—In consequence of the wide spread and devastating rule of empyrics throughout California, in the treatment of PRIVATE DISEASES, the Directors have concluded to place before the public the fact that the Resident Physician of the Electropathic Institute, 645 Washington street, between Montgomery and Kearny streets, is the best qualified physician in the State to ensure a PERFECT and PERMANENT CURE in such cases, and he will always be in attendance to consult privately with all who may require his services, and will ensure speedy relief. Should this meet the eye of any one who may have reason to fear that the disease may be lurking in their system, they may call upon him without fear of being discovered; the charges will be moderate and the assistance prompt.

The International offers to guests the greatest number and best furnished Family Rooms, and also sets the BEST TABLE OF ANY HOUSE IN THE CITY.

No runners employed at this House. Our coachman will always be found on the boats, to take your checks and procure your baggage for our coaches. No charge for baggage.

We are determined that the International shall be the most comfortable, best regulated, and in all respects superior to any like establishment in the State, and shall aim to merit a continuance of the popular favor we have enjoyed heretofore.

# Mining and Scientific Press.

J. SILVERSMITH, Editor.

THURSDAY ..... SEPTEMBER 11, 1862.

The MINING AND SCIENTIFIC PRESS is published at the State Capitol building, Rooms 23 and 24, corner of Battery and Washington streets San Francisco, Cal., by

J. SILVERSMITH, Editor.

At FIFTY CENTS per month, or \$4 per annum, in advance.  
Advertisements, Fifty Cents per line.

## Engravings, Electrotypes, etc.

WE execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOGRAPHY and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

JULIUS SILVERSMITH,

## COMMISSIONER FOR NEVADA TERRITORY.

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery & Washington sts., Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

WE have also now associated with us in our business Wm. H. R. Wood, Esq., whose well known legal acquirements, and practical care, punctuality and correctness, eminently qualify him for business of this kind. Dr. Wood also acts as general agent for all persons having business to be attended to either in this city or Washington city.

## Agriculture in the Mines.

The metalliferous districts of California are so extensive, extending as they do from the Rocky Mountains on the east to the Coast Range on the west, and including both ranges of mountains, that the encouragement of the cultivation of the earth in different localities throughout this vast region could not fail to be of great utility and convenience. If all the more important necessities of life were raised at his immediate door, or in his vicinage, it would certainly accrue much to the advantage of the miner. Hence the cultivation of the valleys and mountain gorges throughout the mines should be countenanced and encouraged. Hence, also, by a law of our State a certain protection is thrown around agriculture in the mining districts. But that protection is so indefinite and restricted, and has been so hampered and "whittled down" by the decisions of the courts, that it amounts to but little, if any, encouragement.

So great are the benefits which would attend on such varied avocations, whereby the money with which to buy and the thing to be bought, would be produced in the same locality, and thus the freightage, and drayage and transportation from distant points be obviated, that it would be worth the while of the mining population to take this matter in hand themselves, and adopt rules and regulations on the subject. They are authorized to enact laws for their own government in their different mining districts. Why not, then, adopt some rules by which a farmer raising breadstuffs and meats for your use, in your neighborhood, may be properly and amply protected in the enjoyment of the fruits of his labor?

As the law now stands, any land which is found to contain minerals, no matter in how small proportion, lying in the mining region, may be appropriated by the miner, notwithstanding it may have been previously appropriated for agricultural purposes. But, would it not be a good rule to make the miner's right of ousting the farmer depend on the existence of a certain proportionate quantity of mineral in the soil? That proportion might be fixed at the *minimum* paying quantity; and whenever the ground ceased to contain a sufficient quantity of the precious metals to warrant its being profitably worked, then let it be subject to the claim of the cultivator. Perhaps all the soil in the mining districts contains more or less of mineral properties and substances and it is certainly unreasonable and impolitic to say that because a piece of land may contain a few grains of gold per acre, that, therefore, it cannot be appropriated for agricultural purposes. Hence some standard and rule ought to be fixed by the regulations of the miners, and by State legislation, which will afford a sure test and criterion by which the conflicting claims of miners and farmers may be adjusted, relative to such lands as are situated within the mining regions of the State.

## The Coso Mining District.

A few details respecting this immensely rich mining district may not be inappropriate at this juncture. Of late many rich leads have been discovered and opened, yielding results scarcely to be anticipated. A few months since we published an illustration exhibiting the leading mining localities, with particulars relating thereto. Since then, considerable work and mining enterprises of great moment have been performed, which certainly places mining interests in that district at handsome figures, and the present mine owners promise themselves as rich a harvest as some of the great Washoe adventurers. We will give a short synopsis of the companies now fully under way for developing these mines.

The Pioneer Mill, erected by Mr. G. H. Monroe of San Francisco, was the first crushing apparatus, and is situated at Willow Springs, 5 miles east of the Coso Company's lead; it is a dry crushing mill, propelled by steam, and is capable of crushing about six tons of quartz per diem. Mr. Monroe contemplates soon erecting an 8-stamp mill, which will contain the latest improved steam pans. To this mill belongs three distinct leads, entitled respectively the Winoshick, War-Tab and Decorah, comprising 900 feet each. From tests made of the ore it is found to contain about 60 per cent. gold and about 40 per cent. silver.

The Coso Silver Mining Company have seven leads, which have been described in a former edition. Altogether there are now six mills in working condition, and more are on their way to that country. Some four companies are now incorporated, all of which are prospecting their claims diligently. This district presents some of the most important advantages when compared with other mining localities. Plenty of wood, water, and easy access to the leads by means of good roads, are some of its leading features. The climate is as salubrious as that of Italy, and there is nothing to prevent the miner from prosecuting his work the whole year.

SCIENTIFIC TOUR.—The senior editor of this paper started on the 9th inst. for his lecturing tour through the mining regions of this coast. He sets out well equipped for the expedition, being amply provided with all manner of diagrams and drawings necessary to the elucidation of his subject. Our mining population will, doubtless, receive a great and useful accession to their stock of valuable information relative to the best manner of working and developing the riches of our mineral localities. We bespeak for him an attentive hearing and a liberal patronage.

METEORIC SHOWER.—A correspondent of the Red Bluff Beacon writes that just before daylight on the 10th ult., he observed a remarkable appearance in the heavens, as of dropping or falling stars in every direction from zenith to horizon. These luminous globes or globules were apparently of different sizes, from a common marble to that of a hen's egg, and came gently down, some quite near the ground, then burst and vanished. He awakened several member of his family, then went to arouse a friend but found him intently watching the same phenomenon. They all gazed and wondered until the broad glare of daylight rendered the meteors invisible. The appearance was similar to the meteoric shower of the 1st of November, 1833, which was observed throughout the Northern States.

## Modern Sewing Machines.

As a household god, the sewing machine ranks equal and is as necessary as the utensils for preparing our daily nourishment. The combined efforts of science and mechanics have made many improvements, and reduced this machine to such simplicity and cheapness as to bring it within the reach of the poorest housekeeper. From Patent Reports we learn that nearly one hundred patents have been obtained since the original invention, a period of twelve years. As an article in manufacturing, it has proved one of the greatest auxiliaries, and its influence on commerce has been materially felt in every civilized country. We present in this issue an illustration of the NEW ENGLAND FAMILY SEWING MACHINE, of which the above cut is a faithful representation. It ranks probably as the neatest, simplest and perhaps cheapest sewing machine now in use. An agency has been established in this city, and since their introduction the sale has been so great that the factory had to enlarge its facilities to enable them to fill the orders coming from the Pacific States. Messrs. Stewart & Shear, at No. 60 Second street, in this city, are the general agents, but they have established sub-agencies throughout this coast. The cost of this machine is only \$25, as will be seen by the advertisement elsewhere.

## Frederik Reichel's Improved Buckle.

The above engraving presents another splendid improvement in ladies' buckles, for which we have prepared an application for letters patent for the inventor, Mr. Reichel, of this city. This invention consists chiefly in the peculiar construction of the plate (c) which has an orifice (d) through which the waistband is introduced, requiring no sewing; the other end of said waistband being then taken around the waist and passed between the cylinders (a and b), and when the required tension is obtained, the prongs (a, a, a) serve in holding the ribbon securely. This device is by far the simplest, most convenient and most expeditious ornament for ladies yet invented. The inventor is favorably known in this State as a manufacturer of jewelry, &c. Mr. R. will execute all orders entrusted to him, and give information respecting his invention. Elsewhere read his advertisement.

NEW INVENTION.—There is on exhibition at Stockton a new style of windmill of the combination order. It is called "Holmes' Patent," and is so constructed as to be self-regulating, at the same time duplicating the force of the wind and motive power. This is effected by placing the revolving fans in a large drum, which operate directly opposite stationary fans in the drumhead. The governing fans stand perpendicular, and the force of a strong breeze will incline the fan to a liberal angle and contract the flanges, which are so prepared and placed as to almost entirely close the opposite end of the drum, thus, on a direct scientific principle, governing the revolution of the wheel.

BUR CLOVER.—In a correspondence with the California Farmer, Gen. Allen mentions a abundance of "trebol," or bur clover, growing in Los Angeles county. It affords the best sort of hay, and without the trouble of mowing.

## SUMMARY OF MINING NEWS

## CALIFORNIA.

**Mariposa.**—The Gazette says there are some four or five claims in Mariposa creek, near the village of Mariposa, which are paying from \$10 to an ounce a day to the land. The cause of this is that last winter's flood sluiced off the top ground and left the pay dirt more convenient.

Early's quartz vein on Sweetwater, as usual, continues to yield its share of precious metals. The product of three weeks' run with an arrastra, from three tons of rock, was 27 ounces of gold.

**Nevada.**—The Transcript says that several more new quartz leads, and good ones, have been discovered a short distance from Nevada, during the past week. There seems to be quite a mafia for quartz, and a large number of men are out prospecting.

**Sierra.**—Wood and Reittie cleaned up, last week, from 50 days' run of the Independence mills, \$39,500.

## NEVADA TERRITORY.

We gather the following items from the Enterprise of the 30th August:

A specimen of exceedingly rich quartz has been left at this office from the Fringe of the West mine, situated at Silver City. Bright, yellow gold sticks out all over it. The gold is uncommonly coarse for Washoe, and is contained in a mass of decomposed sulphurets of a brown color. The specimen before us came from a part of the lead 200 feet below the surface. 50 tons of ore just raised from this point will average \$150 per ton. They are now running a tunnel that will strike the lead 300 feet below the surface. The tunnel starts near Johnson's mill. There are certainly many more leads in that district that would pay equally as well as the Fringe of the West were this well developed. Several others are paying from \$40 to \$70 per ton. Capital is needed in Devil's Gate district. All the work that has been done so far has been done by miners with little or no means.

The principal companies in the Flowery district are at work on their leads. Several of them are getting out very fair ore, and a few rock sufficiently rich to pay for crushing. The mills are all at work, and though there is not much likelihood of a large town being built in that locality, we have no doubt that Flowery will prove eventually a brisk business place. A few years only are required to develop the many promising mines found in the surrounding hills. As the flow of water is increased by the driving in of tunnels at the head of the canon, many fine sites for water mills may be found in the vicinity of Flowery.

Virginia City is generally spreading "coming out of the wilderness." Over one hundred new buildings have been erected the past few months, and from present appearances one hundred more will be erected the coming fall and winter.

A correspondent writes of this Territory as follows: There is not in the world so many rich mines in the same scope of territory as we have in Washoe. There is not in the whole world a mill built for the reduction of gold and silver ores, equal to one mill (the Gould & Curry) now nearly ready to go into operation in this Territory; and taken together, there are no mills in the world that will compare favorably for completeness in every department with the hundred or more mills now in operation in Nevada.

**Esmeralda.**—The mines here are just now exciting considerable interest, not only among those who are fortunate enough to be interested in them, but among the people of the outside world, who are always watching with eager solicitude the operations and developments which are made in the different mining districts on this side of the Sierras. Although but little has been said about the mines in this district, yet during the season considerable in the way of prospecting has been done, and a large amount of labor has been expended upon the different ledges within the past three months, and more developments have been made, which go to prove beyond doubt, that the mines here are far more extensive than those who were most intimately acquainted with the district ever believed them to be. A number of new discoveries have been made recently, which bids fair to equal, if not excel, anything ever found in the place. No ledge in the district has ever produced better specimens from the top rock than has been found upon the Isabella, Mary Ellen, Osceola, and Rio Vista. Not even the Bunker Hill ledge, which is considered the star ledge of the district, ever produced anything from the top superior to the specimens found upon those above mentioned.

There are two companies owning the Bunker Hill ledge—one called the Discovery company, the other the First South Extension. Those who discovered the ledge divided it as near in the center of the croppings as could well be, and thus making two companies. Many persons have serious objections to extensions, for the reason that, in most cases, they are hard to find; but in this instance, as in that of the Winnemucca ledge, at Aurora, the extension is just as good as the discovery. The company owning the extension have a shaft down to the depth of 40 feet, and have out about 30 tons of very rich quartz, which they intend to have soon crushed. The quartz is now mostly decomposed, and is very rich in both gold and silver. Some of this quartz is very different from anything I ever saw; it is of a bluish purple color, and you can cut it in flakes as you would a piece of hard soap, and is as full of fine gold and silver as it can well be, and called quartz.

The Minchaba comes next in the list. The company owning this ledge have a shaft or incline in about 40 feet. They have taken out some 25 tons of excellent looking quartz, which fairly sparkles with gold, and shows unmistakable indications of being very rich in silver. The ledge is about two feet thick and filled with blue silver veins from one side to the other.

The two ledges above mentioned have the most work done upon them of any in the district. There are a number of ledges here, however, which, if they were opened, would prove as good as the Bunker Hill or Minchaba. Some of the most prominent veins are the High Peak, North Star, Body Bluff, Eureka, Union, and I might mention many more, all of which are well defined quartz veins, and show indications of something worth digging for.

The placer claims are paying very well. The boys, as a general thing, make from \$4 to \$7 per day, and a strike of two or three ounces occasionally happens. They perhaps average about \$5 per day. The gold here is worth but \$12 an ounce. Two years ago the merchants gave \$16 for it. The cause of this depreciation is, of course, unknown.

At the annual meeting held on the 9th August, for the election of Recorder, O. J. Leach was elected. A few amendments were made to the by-laws, but no change of importance.—(Bodie cor. of Star.)

The California State Telegraph company have arranged to telegraph to Aurora, in Esmeralda, by way of Genoa. Dispatches will be sent by the wires to that point, and then forwarded to Aurora each day. Answers will be returned by express and telegraph.

**Humboldt.**—A correspondent of the Silver Age writing from Spring Valley, in the Humboldt mines, under date of Aug. 30, says:

Prospecting is being carried on with much energy. Some very rich strikes have recently been made. The Ophir company, situated in this district, have struck their ledge, which is rich in gold and silver. The ledge is about four feet thick. The Oneida company, on the same lead, are running a tunnel, and expect to strike their lead soon. The Badger company have struck a good silver lead. The Moonlight is considered one of the best claims in Humboldt county. Goods are coming in pretty freely, the large proportion of which consists of liquors. During the past two weeks there has been no

bacon, and no flour, except Salt Lake flour, at Unlerville. Already some of the ranchmen are plowing, preparatory to sowing barley. It is my opinion that barley will grow here in profusion.

There are some very fine prospects in the course of erection at Unlerville and Star Canon. We had quite a distinguished arrival here a few days since in the person of an agent of the Rothschilds. What his business is out here I am unable to say, but he has created quite a sensation among the miners, all of them having "feet" to sell. I have heard of only one purchase made by him as yet. Capital is flowing in, and during the past week several sales were effected in Indian district. There are some 60 men prospecting in that district. I am pleased to say that there is only one Chinaman and woman in those parts.

## OREGON AND WASHINGTON TERRITORY.

Capt. R. Bledsoe who has just arrived from the new mines, writes thus from Florence, under date of Aug. 14:

I got back last night from the new mines, and after prospecting six days I am satisfied that they are as good as the Florence mines. Enclosed find one ounce of gold, which I panned out on Warren's creek, washing only 13 pans of average dirt. From what I saw, I am of the opinion that the mines are extensive, as new creeks and gulches are to be found every day. They are on the east fork of Meadow creek, about 45 miles from Florence, and nearly due east. A great many have gone across Salmon, thinking they were on Payette river, but they are on the right trail now.

Lucas, Morrow & Co., on the river, at Canon City, took out from their claim \$307. Pay dirt on the bed rock from 4 to 6 feet thick. On the afternoon of the 11th, five men furnished dirt from the bed rock for one rocker, and took out 18 5-16 ounces. This was the return for half a day's work. The week previous they took out in one day \$255.

On Rich Gulch, Powers, McDonald & Co., working three men, with sluices, took out on Tuesday of last week \$49 98. Their claim averages about \$15 per ton of the sand.

The Trenton company, six men, on the creek near Canon City, on the 12th, after a little stripping the day previous, took out \$115.

About 150 men are working on Dixie creek, some 15 miles above Canon City, on the opposite side of the river. They report good prospects. Those at work with sluices are making from \$5 to \$10 per day to the hand.

The miners on Canon Creek are working at a great disadvantage, owing to the lack of capital and the scarcity of lumber. Everything goes to show the richness of this creek, and as soon as it is flumed and scientifically worked, great results may be counted upon. Supplies continue scarce.

A correspondent of the Mountaineer writing from Canon City, John Day mines, under date of August 4, says:

The mines are turning out first-rate, and next year this will be one of the best mining camps in the country. One company who are down to the bed rock have not out as high as \$118 to the pan. Another company of three men took out in one day 105 ounces. About 40 tunnels have been started, and these are paying from \$5 to 10 ounces per day to the hand. There are now here and within two miles of this place, nearly one thousand men, and there will be room enough for five thousand more this season.

The same paper, published at the Dalles, gives the following in regard to the trade and prices of goods at that place: Flour, \$8@10; bacon, 16 cents; beans, 12½ cts; coffee, 29c; tea, 80c@1.25; miners' tools are in full supply, and are sold at Portland prices with freight added. Horses and pack animals can at all times be bought at the Dalles at low figures. A fair "pack" can now be had at from \$30 all the way up to \$75 and \$80. A number of pack trains, within the last week, have fitted out at this point for John Day river. The trade of the John Day mines begins to assume quite an important feature in the general trade account of the city.

Another party, writing to a friend from the prospective town of Independence, on one of the tributaries of John Day's river, says the miners are engaged in fluming, ditching and other operations, preparatory to taking out large quantities of the covered ore. They have christened the district in which they are located the "Yellow Bluff District." It is about 1½ miles long and on an average 400 feet wide. It is opposite to the mouth of Granite creek. It is about five feet to the bed-rock, paying about four cents to a pan from the top down. The ground is almost perfectly flat, and before they can work it advantageously they must flume the creek. Lumber is worth \$200 per thousand, making fluming quite an expensive operation. The gold is fine, smooth and heavy. The mines are workable about four months in the year. The weather was so cold on the 25th July as to freeze water in the cabins. Mr. Sessions thinks the gold-bearing range is extensive, but only rich in spots.

The mines on Granite creek were paying well; they extend from the mouth of the creek, up the same, about eight miles. Flour is worth in the mines \$35 @ 100 lbs; bacon, \$45; shovels, \$4 50; axes, \$8; and other things in proportion.

Mr. W. T. Atkeson, writing to his father from Wilson creek, Powder river, says: In four days last week four of us took out \$321, being the first work we have done. On Monday we worked part of the day and took out \$45; yesterday we took out \$149, mostly coarse gold, one piece weighing \$37, and a number of pieces from \$3 to \$10 each. There is quite an extensive region here, and new discoveries are continually being made.

The gold of these mines is worth \$17 50 per ounce, but goes here for \$16. Powder river valley is being settled up—some 30 land claims are already I shall move my family here next spring: some will this fall; but I prefer waiting till spring, to see how the Indians behave.

There is quite an excitement over on Snake river, near the mouth of Burnt river; how it will prove I don't know.

## COLORADO, N. M.

By late intelligence from the Colorado we are informed that from 800 to 1,000 persons were at work on the placers, which are said to be the richest ever discovered on this continent. Whilst gold was abundant, provisions were very scarce, and a famine threatened. Flour was worth \$1 a pound and sugar \$2, and unless provisions are soon forwarded it is feared the miners would be starved out. We learn that a line of sailing vessels are to be put on at this point for the Colorado river, which will materially lessen the price of freight to the mines. Freight is now forwarded from Fort Yuma to the mines at \$10 per ton, and the sea freight must necessarily be less than that charged for land carriage.—[Alta.]

The Los Angeles News says that on the 22d ult., upwards of \$9,000 was shipped from that city to San Francisco.

**JEWELERS' GOLD.**—The London *Mechanics' Magazine* contains the following interesting remarks on this subject:

From very ancient times it has been the practice to divide the ounce troy into twenty-four imaginary parts. An ounce of pure gold, therefore, and what is called twenty-four carat gold, are identical terms. Anything less than twenty-four carat gold indicates that in an ounce of that substance there are so many twenty-fourth parts of pure gold, and that the remaining portions of an ounce of it is made up of an alloy of some inferior metal, usually copper. Except for wedding rings, which are, or should be, made of standard gold, consisting of twenty-two parts or carats of pure gold, and two of copper alloy, jewelers seldom use gold of a higher rate of purity than eighteen-carat. How often they use it of a much lower degree of fineness they know best. There is no doubt that it is possible to give almost any color to gold, by the addition of particular alloys, and of late ingenuity has been at work to give the sixteen-carat gold the appearance of pure gold. This is done by the aid, partly, of what is technically known as the coloring pot, in which the metal is treated to an acid bath of a certain amount of strength. By the judicious use of this contrivance, twenty-two carat gold may be made to resemble very closely native gold, as found in the shape of nuggets in California or Australia. Nuggets are never, however, found to be pure gold—they consist for the most part of 23 or 23½-carat gold, the fraction being made up of an alloy of some inferior metal. In order to test the purity of gold the application of heat is, perhaps, one of the simplest means. Pure gold will not be in the least discolored by it, while twenty-three-carat gold will take a slightly red tint. There is this disadvantage about the mode of testing suggested, it will certainly discolor very materially all gold of degrees of fineness inferior to that of twenty-three-carat, and nothing but the acid bath will restore it to its original hue. In order to effect this latter operation on a small scale, nothing more is necessary than to obtain an earthen pipkin, or gallipot, place the article in it, cover it with nitric acid, and hold it over a spirit or gas lamp, or even a candle, until the acid boils. The result will be that the metal will be restored to its original brightness.

As regards the testing of the genuineness of gold coin, there is nothing equal in simplicity or efficacy to weighing it. It is impossible that any metal inferior to standard gold can be used in the manufacture of counterfeit sovereigns or half-sovereigns which will give pieces, of the same size, of equal weight.

The testing of "jewelers' gold," when used in the manufacture of many kinds of trinkets, is a matter attended with considerable risk and difficulty, and perhaps the only means readily at the command of the purchaser for ensuring a proper relationship between quality and price in such cases, is to ascertain the respectability of the seller.

[Twenty-four-carat gold means pure gold, independent of its quantity—whether an ounce more or less.—Ed.]

**GAS.**—There is a spouting well in Salineville, Ohio, up which gas rushes in large volumes and with great violence.

## V. SQUARZA'S PUNCH FACTORY.

WE PRESENT HEREWITH THE PORTRAIT AND TRADE MARK OF the gentleman who heads this article. Mr. Squarza is favorably known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is an fair in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser,
Arac do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Coca do.	Anti-Dyspepsia Bitters,
Coffee do.		Appetizer,
Tea do.	Morning Comfort,	Ladies' Tears.
Pineapple do.	Kuemmel,	

And CHAMPAGNES of all brands.

# WHY WILL YOU SUFFER, YOU THAT ARE AFFLICTED?

DISEASES CURED WITHOUT THE USE OF MEDICINES!

THE DIRECTORS OF

## The Electropathic Institute,

645 Washington street,

Offer those who would avail themselves of the researches into the arena of medical science, an opportunity to benefit thereby. Thus, by the application of an art totally differing from the usual routine systems of the day, Electropathy is now the favorite study and practice of the most learned medical savans throughout continental Europe. Every proof exists that the magnetic electro current reaches directly the nervous centres, the brain, spinal cord and nerves of sensibility and motion, the controlling agents of organic life. The application of this powerful and mysterious agent is thus made, under the guiding hand of experience, subservient to the alleviation of disease, restoring through the medium of the nervous system the normal functions of the various viscera. By this agent the pernicious consequences of converting that most delicate of organic tissues; the stomach, into a chemical laboratory or drug shop, is totally avoided. Thousands can testify as to its efficacy, and many have experienced its beneficial effects. When correctly administered, Electropathy is applicable to all diseases to which flesh is heir, but more particularly to complaints of the nervous system, Rheumatism, diseases of the Lungs and Spine.

The Directors have secured the services of Dr. JOSSELYN, whose improved Electropathic Instrument stands in advance of all others as a curative agent. This scientific Physician will be in attendance from 9 A. M. until 8 P. M., to consult with the afflicted, and in all cases where he can conscientiously do so he will warrant a perfect and permanent cure. Those particularly who have exhausted the catalogue of medicines, will do well to call and consult him, and examine the certificates of cure which he has recorded in the Institute.

### Rheumatism! Rheumatism!

The above troublesome disease can be cured by electricity only; and Dr. Joselyn of the Electropathic Institute will warrant a cure, perfect and permanent, in a very short time, or ask no pay for his services.

### Consumption,

That awful and hitherto considered incurable disease, can be cured by the Electro-Magnetic treatment. The Electropathic treatment at once stops the ravages of this fell destroyer, and the cure commences from the first treatment. A cure in all cases will be insured.

### Diseases of the Eye.

The Electric treatment is the only mode by which a rapid and permanent cure can be effected in Sore Eyes. It acts upon the nerves and mucous membrane connected with the eye, and the removal of morbid matter and all inflammation, produces a healthy action, at once restoring that valuable organ to its natural state. A cure warranted, or no pay asked.

### Electro-Magnetic Baths.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impositions in the bathing line. The pure magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble; and cases have been known where the patient has been injured so badly as to require months to remove the injury. The only place where these baths can be obtained in all their purity is at the Institute, where the resident physician will be always ready to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic System, at the Institute, during the last year:

NAME OF DISEASE.	NUMBER.
Rheumatism, - - - - -	821
Neuralgia, - - - - -	368
Dyspepsia, - - - - -	297
General and sexual debility, - - - - -	240
Asthma, - - - - -	220
Bronchial affections, - - - - -	187
Fever and Ague, - - - - -	183
Female irregularities, - - - - -	161
Mercurial affections, - - - - -	150
Diseases of the eye, - - - - -	485
Paralysis, - - - - -	78
Scrofula (long standing), - - - - -	330
Catarrh of the lungs, - - - - -	27
Catarrh of the head, - - - - -	321

### FREDERICK KESMODEL, Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery. The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,  
Inventor and Patentee.

## J. D. DEMAREST, M. D., Graduate of N. Y. University, 1848.

Professor of the theory and practice of Medicine, as demonstrated in the treatment and Cure of Special Diseases in this State, during the last thirteen years.

IN ALL THE BRANCHES OF BOTH THE ARTS AND SCIENCES, AS WELL as the Medical Profession, speciality has ever been recognized by men of judicious reflection, as both progressive and instructive, for it is a perfectly well demonstrated fact that any individual, however astute he may be, attains to an infinite greater degree of perfection by a thorough and persevering continuity to one branch of art, science, medicine, or mechanics, than if he attempted to accomplish half a dozen—as in the latter case he would be likely, nine times out of ten, to obtain at most but a very superficial knowledge of either. In the practice of medicine or surgery, it unravels, simplifies and makes clear to the arduous student the mysterious complications (complicated on account of the numerous causes which produce them) which diseases of any kind take upon the human system; operating as they do frequently both on the mental and physical organs. It seeks to recuperate and restore the functions to their natural and proper status, as well as to neutralize all antagonistic influences to which the system is continually subject. Certain it is, that while the busy affairs of life seem to exhaust all our time and attention, the incipency and progress of disease, sometimes of dangerous and fatal character, approach us almost unnoticed. Slow in its progress, but insidious in its course, a disease, or even the simplest disturbance of a single function, frequently becomes an affair of imminent danger when least expected. To this attention of the physician of specialities is always earliest given. With proper perceptive powers, added to ample experience, he is necessarily able to arrive with unerring certainty to a correct conclusion as to the character of the ailment and the proper appliances for its cure. This I have never found to fail. A remedy properly administered, and at the proper time, is sure to effect the object of its mission, provided it be directed by the hands of a skillful physician, who knows his business. I need not reiterate the old adage, that "Health is the endorsement of Divinity," sent to us for our own benefit, and that we should not for a moment disregard the secret admonitions that tell us to beware, lest we fall imperceptibly into a labyrinth from which it will be much more difficult to escape than if we had given proper attention to ourselves before venturing so far. Consult your physician before it is too late; confide in him, and you will save yourself an infinity of suffering.

Below will be found a few of the testimonials received by Dr. Demarest previously to his leaving home for this country in 1849:

NEW YORK, Jan. 14, 1848.

This may certify that Dr. J. D. Demarest, by the assiduity and attention which he has given to his studies, and his uniformly good conduct, justifies me in believing that those among whom he may be placed, can repose confidence in his professional attainments.

VALENTINE MOTT, Prof. Surgery N. Y. University.

I concur in the favorable impressions of my colleague.

SAUL HENRY DICKSON,

Prof. Theory and Practice of Medicine, N. Y. University.

MARTIN PAINE, Prof. Materia Medica, N. Y. University.

This may certify that Dr. J. D. Demarest has been in my office for some time past, and has attended a number of my patients for me, with perfect satisfaction both to them and myself. I, therefore, take pleasure in recommending him to any person or persons requiring medical services. I can also speak highly of his moral as well as professional character.

J. WELDON FELL, M.D.

New York, December 5, 1848.

I take great pleasure in recommending to the notice of all "whom it may concern," Dr. Demarest, a gentleman of first rate attainments in his profession; and a man in every way qualified to be trusted with the health and lives of any body of men he may choose to join. I have had his acquaintance for a long time, and he has attended my patient for me with entire satisfaction.

N. CLARK LEAVINGS, M. D.

New York, January 29, 1848.

Being desirous, above all things, of rendering myself proficient in my profession, I assure my patients and the public that I attend personally to all cases that come before me, either by correspondence or by personal visits. The strictest confidence and the utmost regard for professional honor and secrecy always observed.

Patients residing in any part of this State can have the remedies applicable to their several disorders forwarded to them, without risk of exposure. Be minute in the details of your case, as regards the duration of the complaint, symptoms, age, general habits of living and occupation.

All female complaints, of whatever name or nature, treated successfully. Those ladies whose complaints naturally excite a hesitation in applying for advice, may rest assured that in most instances a personal interview is unnecessary, as remedies and general instructions can be administered through correspondence. Address, DR. J. D. DEMAREST, San Francisco, Cal.

Office—S. E. corner of Washington and Sansome streets, over Ulman's Book Store, nearly opposite the Post Office. je27

**DR. L. J. CZAPKAY'S**  
**PRIVATE MEDICAL & SURGICAL INSTITUTE.**  
 Sacramento street, below Montgomery,  
 Opposite the Pacific Mail Steamship Company's Office,  
 SAN FRANCISCO.

*Established in 1854 for the Permanent Cure of all Chronic and Private Diseases, and the suppression of Quackery.*

Attending and resident Physician, Dr. L. J. CZAPKAY, M.D. in the late Hungarian War; Chief Physician to the 20th regiment of Hanover; Chief Surgeon to the Military Hospital of Pesth, Hungary; the late lecturer on Genito-Urinary Diseases and Diseases of Women and Children; and Honorary Member of the Philadelphia College of Medicine.

Particular attention paid to the treatment of diseases peculiar to Women and Children.

Office Hours—From 9 A.M. to 9 P.M. Communications strictly confidential. Permanent cure guaranteed or no pay. Consultations, by letter or otherwise, free. Address,

L. J. CZAPKAY, M.D.

### TO THE AFFLICTED.

DR. L. J. CZAPKAY returns his sincere thanks to his numerous patients for their patronage, and would take this opportunity to remind them that he continues to consult at his Institute for the cure of all forms of Private Diseases—such as Syphilis, Gonorrhea, nocturnal emissions, and all the consequences of self-abuse. In the first stages of syphilitic or gonorrheal diseases, he guarantees a cure in a few days, without inconvenience to the patient or hindrance to his business. When a patient, by neglect or improper treatment, has developed the secondary symptoms of syphilis, such as buboes or painful swellings on the groins, or ulcers in the throat and nose, which, if not checked, destroy the soft parts and cause the bones to mortify, separate and come away, leaving the sufferer an object hideous to behold; or when blotches and pimples break out on the skin, or when he has painful swellings upon the bones, or when his constitution is injured so as to predispose to consumption or other constitutional disease, the Doctor guarantees a cure or asks no compensation.

In rheumatism, chronic or acute; in dysentery or diarrhoea, he has safe and effectual remedies. For the treatment of the consequences of self-abuse—such as nocturnal emissions, nervousness, timidity, headache, pains in the back and limbs, with general weakness, loss of appetite, loss of memory, injury to the sight, restlessness, confusion of ideas, dislike for society, and a feeling of weariness of life, with the nervous system so excitable that slight noises, shock or startle the patient, making his existence miserable. For the above in ladies the Doctor will guarantee a cure, or ask no compensation. He can be consulted free of charge, and invites all to call, as it will cost them nothing, and may be much to their advantage. Office hours from 9 A.M. to 9 P.M.

Dr. L. J. Czupkay is daily receiving applications from every part of this State and from Oregon and Washington Territory, for the treatment of every form of disease, and there is not one who will come forward and express dissatisfaction; on the contrary, the Doctor is in daily receipt of letters expressive of gratitude and thankfulness, some of which are published below by permission.

Dear Sir—Having entirely recovered from my sickness, I avail myself of this opportunity to return my thankful acknowledgments for the relief that you have given me. When I think of the distressing bodily weakness under which I have suffered, and the nervousness, headache, fearfulness, want of confidence, dizziness, restlessness, weakness in the limbs, loss of memory, confusion of ideas, dislike for society, nocturnal emissions, and many other troubles, which had made my life miserable, I can hardly express the gratitude I feel for my existence had become a burthen to me, and nothing afforded me the least gratification, whilst now I feel perfectly well and can enjoy life to my entire satisfaction. Knowing that there are many afflicted as I have been, you have permission to make use of this letter as you may think proper. Believe me gratefully yours,

M. MICHELS.

To Dr. L. J. Czupkay, San Francisco.

MARTINSVILLE, June 3, 1855.

Dr. L. J. Czupkay, San Francisco: Sir—I have used the lot of your medicine, and do not think I shall need any more, as I feel very well, except that I have not entirely got my strength yet, but soon will with the appetite that I have. It is just three weeks, you may recollect, since I called at your Institute, with my constitution, as I thought, entirely broken, and never thought you would be able to cure me perfectly, but thought you might be able to do something to ease the pain in my back and head, and strengthen my limbs, which were so weak that they would almost give way under me, when I walked, and strengthen my nerves so that I would not get excited and tremble at every little thing. Now, that you know what I expected, you may judge of my satisfaction at my complete recovery from those symptoms, and the removal of those blotches and sores from my skin and the ulcers from my throat, and the entire stoppage of these emissions, which you and were principally the cause of my sickness.

I can hardly tell you which is the greatest, my joy or my surprise, for except not having got my strength, I felt as well as any man can feel.

Enclosed I send you Twenty Dollars over your charge, and think myself cheaply cured. If you think anybody will be benefited, you may put this letter in the newspapers. Believe me gratefully yours,

THOMAS HAYDEN.

### [CERTIFICATE.]

The undersigned desirous of acquainting those who may be unfortunate enough to be similarly afflicted where a permanent relief of their sufferings may be obtained, feels it his duty to thus publicly express his sincere gratitude to Dr. L. J. Czupkay, for the permanent recovery of his health. Borne down by the distressing symptoms incident to the vicious practices of uncontrollable passion in youth, depressed in body and mind, unable to perform even the most trifling duty imposed upon the daily avocations of life, I sought the advice of many physicians, who at first regarded my disease as of trifling importance, but alas! after a few weeks, and in several instances months, of their treatment, I found to my unutterable horror, that instead of relief my symptoms became more alarming in their torture, and being told by one that the disease being principally confined to the brain, medicines would be of little consequence, I despaired of ever regaining my health, strength and energy; and as a last resort, and with but a faint hope, I called upon Dr. Czupkay, who, after examining my case, prescribed some medicine which almost instantly relieved me of the dull pain and dizziness in my head. Encouraged by the result, I resolved to place myself immediately under his care, and, by strict obedience to his directions and advice, my head became clear, my ideas collected, the constant pains in my back and groins, the weakness of my limbs, the nervous reaction of my whole body on the slightest excitement, the misanthropy and evil forebodings, the self-distrust and want of confidence in others, the incapacity to study and want of resolution, the frightful, exciting, and at times pleasurable dreams at night, followed by involuntary discharges, have all disappeared, and, in fact, in two months after having consulted the Doctor, I felt as if inspired by a new life, that life which, but a short time ago, I contemplated to end by my own hand.

With a view to guard the unfortunate from falling into the snares of incompetent quacks, I deem it my duty to offer my testimony to the merit and skill of Dr. Czupkay, and recommend him to all who may stand in need of medical advice, being assured by my own experience that, once under his care, a radical and permanent cure will be effected.

B. F. FILLMORE. [L.S.]

State of California, city and county of San Francisco—Subscribed and sworn to before me, this 17th day of April, A. D. 1856.

(Signed) JOHN MIDDLETON, Notary Public. [L.S.]

PACIFIC FOUNDRY AND MACHINE SHOP, First Street, between Mission and Howard, San Francisco, California.—By recent additions to before extensive establishment, we can confidently announce to the public that we now have

*The Best Foundry and Machine Shop on the Pacific Coast.*

With upwards of forty-five thousand dollars worth of patterns, we are enabled to do work cheaper and quicker than any other establishment on this side of the Rocky Mountains.

We make to order, and have for sale, High and Low Pressure Engines, both Marine and Stationary; Straight Quartz Mills of all sizes and designs; Stamp shoes and Dies of iron, which is imported by us expressly for this purpose—its peculiar hardness making shoes and dies last two or three months. Mining Pumps of all sizes and kinds; Flouring Mills; Gang, Sash, Malax, and Circular Saw Mills; Shingle Machines, cutting 25,000 per day, and more perfectly than any now in use. One of these shingle machines can be seen in operation at Metcalf's mill in this city.

Knox's Amalgamators, with the latest improvements; Howland & Hanscom's Amalgamator; Goddard's Tub, lately improved, in fact, all kinds now in use.

Quartz Screens, of every degree of fineness, made of the best Russia Iron. Car Wheels and Axles of all dimensions; Building Fronts; Horse Powers; Smut Mills; Boiler Fronts; Wind Mills; of Hunt's, Johnson's and Lum's Patent; and to make a long story short, we make castings and machinery of every description whatever; also, all kinds of Brass Castings.

Steamboat work promptly attended to. Thankful to the public for their many past favors, we would respectfully solicit a continuance of their patronage. Before purchasing, give us a call and see what we can do.

GO DDARD & CO

### ADVANTAGES

—OF—

### BRYAN'S IMPROVED MILL.

THIS MILL will Crush, with the same weight of Stamps, Twenty-Five per cent. more rock than any other mill yet invented. It is also Cheaper, more Durable and run with Less Power. All parts of it being fitted together before leaving the shop, it can be put up set at work Crushing the Ore, in Ten Hour ter arriving on the ground!

Every one exclaims after seeing the Mill in operation, "Why has not so perfect and ye simple a mill been invented before? It would have Saved the Fortune of many a Miner expended in worthless machinery, and enriched the STATE A THOUSAND FOLD!"

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual loss was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14, while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

For parting silver from gold when gold is below 300-1000ths fine: . . . . . 3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts " "  
 " " 750-1000ths to 950-1000ths " . 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts, " " " "  
 " 501 " 1000, 14cts, " " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

HOSTETTER'S  
STOMACH BITTERS,

They renovate, purify and strengthen the system, and aid the stomach in the performance of its functions. It is a sovereign specific for imparting strength, vigor and tone to the system, and possessing the curative powers for all diseases arising from a disordered stomach.

## DYSPEPSIA,

In all its forms, yields to its control and invigorating properties, and that its return is effectually prevented and the digestive powers preserved in the fullest vigor by a subsequent occasional use of this remarkable invigorant. The disease would seem to have an infinite variety of

## SYMPTOMS:

Among these are constant pain or uneasiness at the pit of the stomach, oppression after eating, spasms in the stomach and diaphragm, morning nausea, pain between the shoulders, fluttering of the heart, constipation of the bowels, irritability, broken sleep, nightmare, loss of memory, dimness of sight, prostration of strength, dull, stupefying headache, want of appetite, flatulency, and a feeling of despondency and despair wholly independent of external causes. All the evils in this mournful catalogue are not merely alleviated, but invariably removed, by a few bottles of HOSTETTER'S BITTERS.

## LIVER COMPLAINT.

Persons who languish for years under apparently incurable affections of the liver, the symptoms of which are pain in the right side, pain in the back and loins, a yellow suffusion of the skin and whites of the eyes, extreme indigestion to exertion, complete loss of mental activity, despondency almost amounting to mania, and great bodily weakness, all which are vanquished by the soothing and invigorating properties of this restorative.

TO PERSONS WHOSE HEALTH IS BROKEN  
DOWN.

When the flames of life wane and quiver from exhaustion, administer this famous restorative. It will once more become steady and strong. In the debility which follows violent fever, in diarrhoea, dysentery, dyspeptic complaints and cholera; in the weakness consequent upon natural decay, or resulting from free living or over-exertion, and also in those painful and too much neglected ailments to which ladies are exclusively subject, the Bitters never fail to give permanent relief.

## CALIFORNIANS

Should test the merits of Dr. Hostetter's Stomach Bitters. While it is highly palatable as a beverage, it is unequalled as a tonic and invigorant. In the pursuit of a fortune at the mines, many persons are exposed to attacks of complaints of the digestive organs, and of various kinds of fever. It is the very article that has so long been in demand at the mines.

## FEMALES.

Thousands of ladies resort to it as a remedy for hysteria, fluttering of the heart, nervous headache, vertigo, general debility and all peculiar disturbances and derangements to which, as a sex, they are subject. It cheers and lightens the depressed mental powers as well as strengthens the body, and its use is never followed by any unpleasant reaction.

## A WORD TO THE AGED.

In the decline of life, the loss of vital force consequent upon physical decay, can only be safely supplied by some vivifying preparation which recruits the strength and spirits, without entailing the exhaustion which is always the final effect of ordinary stimulants. It tones the stomach, improves the appetite, acts like a charm upon the spirits.

## BOTH SEXES,

Who suffer from general debility, without any physical pain or other symptoms of a deranged organization, will find great benefit from their vivifying influence on the frame and constitution; and where there is a deficiency of vital force they communicate the energy and vivacity which nature has neglected to supply.

The feeble girl, the ailing wife, the nursing mother, the overtasked man of business, the man of pleasure, under the reaction that follows over-exertion, and all who have a predisposition to paralysis, will do well to resort to this incomparable tonic and restorative.

## DR. HOSTETTER'S STOMACH BITTERS

Should be in the possession of everybody in the mining region. As a preventative against various diseases to which the gold seeker is liable, it has no superior. In all cases of Diarrhoea, Dysentery, and the prevailing fevers consequent upon exposure, the Bitters will be found invaluable as a corrective.

## COUNTERFEITS.

Counterfeits are said to be the homage paid by knavery to success, and from these left-handed compliments Hostetter's Stomach Bitters have not been exempted. Vile imitations of the article are abroad, and the public are earnestly requested to be on their guard against them.

Sold by druggists and dealers everywhere.

HOSTETTER, SMITH & DEAN,

Sole Agents for the Pacific Coast.

227 Montgomery street (Russ Block), San Francisco. [au28

The following letter, which emphatically speaks for itself, was written by the Dean of the Faculty of the Philadelphia College of Medicine, to the editors of the Pacific Medical and Surgical Journal, for publication:

PHILADELPHIA, January 17, 1862.

To the Editors of the Pacific Medical Journal—Gentlemen: My attention has been called to an article in the December number of your journal, in regard to the ad eundem degree granted by the Philadelphia College of Medicine to Dr. L. J. Czapkay. When the application for the degree was made to the Faculty, it was accompanied by affidavits and testimonials to the effect that Dr. Czapkay was a regular graduate M. D. of the University of Pesth, had served as a surgeon in the Hungarian army, and was a regular practitioner of medicine. On the strength of these the degree was granted. The ad eundem degree, as its name implies, is conferred on graduates only, and gives us new privileges. Had there been the slightest suspicion of irregularity, the application would have been refused. By inserting this in your journal you will do an act of justice to the College and confer a favor on

Yours, very respectfully,  
 H. RAND,  
 Dean of the Faculty of the Phila. College of Medicine.

DR. L. J. CZAPKAY'S Private Medical and Surgical Institute is on Sacramento street, below Montgomery, opposite the Pacific Mail Steamship Company's office, San Francisco. The Doctor offers free consultations and asks no remuneration unless he effects a cure. Office hours from 9 A. M. to 9 P. M.

CERTIFICATE.—I, the undersigned, Governor of Hungary, do testify hereby, that Dr. L. J. Czapkay has served during the contest for Hungarian liberty, as Chief Surgeon, in the Hungarian army, with faithful perseverance. Whereof I have given to him this certificate, and recommend him to the sympathy, attention and protection of all those who are capable of appreciating patriotic self-sacrifice, and undeserved misfortune.

KOS-SUTH LAJOS, Governor of Hungary.  
 Washington City, January 6th, 1862. jy25-

F. G. BEPLER,  
PRACTICAL COPPERSMITH,

No. 118 (Old No. 23) Bush street,

Between Sansome and Battery,

SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work.

All orders from the country promptly attended to. je6

Repairing done in a workmanlike manner at the shortest notice. jy25

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. Pick Eyes of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

je20 JOHN WRIGHT, 511 Market street,  
 Opposite Battery, San Francisco.

## Homesteads Cheaper than Proposed under the Shafter Bill.

UNDER THE PROVISIONS of what is known as the Shafter Bill, it is proposed to sell the city title to homestead lot, for twenty-five to two hundred dollars each.

The undersigned will sell homestead lots within the limits of the city, and miles nearer to the business centre than many of the lands covered by the Shafter Bill, and place the party in immediate possession of the same, without present trouble or prospective lawsuits, for from \$10 to \$20 each. THE TITLE is absolutely PERFECT, being a Spanish Grant, finally confirmed and patented by the United States. The Shafter Bill respects this title: the city authorities respect it; the District Court and the Supreme Court of the State, as well as the District Court and Supreme Court of the United States respect it; besides the TITLE HAS BEEN FOREVER QUIETED BY A FINAL DECREE AND JUDGEMENT AGAINST THE CITY so that there is not even a cloud or shadow upon it. Whoever purchases one of these lots will buy a lot, not a lawsuit.

NO. 3.

## TITLE TO MINERAL LANDS IN THE PACIFIC STATES.

For the information of capitalists in distant countries who have heretofore refrained from investing capital in our immense mineral lands, alleging that the laws of our States and Territories do not sufficiently guarantee security in the possession of mining property. To these we have a few facts to elucidate, which are based on the laws of the Federal Government, and the enactments of statutes of States and Territories, as well as local laws in every mining district throughout the Pacific Coast. The code of laws governing the right and title to mines on this coast, is precisely that of Spain and Mexico: the title to mines is vested in the United States Government; each State has the right to govern mining pursuits according to the general terms thereof, by enactments of local laws or statutes, and each mining district has the right to agree upon a set of rules and regulation, but these must conform to the general laws of the United States and the statutory laws of the State in which they exist; litigations and decisions are brought and adjudicated according to this system.

In so far as the peaceful possession of mineral lands are concerned, the Pacific States give ample security to citizens and aliens, and we doubt it much whether any European Government deals out equity and justice with more impartiality than do the Courts and Justices of the Pacific States. The few cases now before the Supreme Court of this State and the Supreme Court of the United States are fast becoming adjusted. The United States Government secures to every citizen and alien, individual and company, the right to take up mineral lands and work them, according to the terms and tenor of the laws and statutes provided. Since no landed proprietorship exists in mineral lands, no hereditary title can be acquired. In the State of California a law exists taxing aliens, entitled "Foreign Miners' Tax," which is \$2 50 per month. It has, however, been enforced only against the Chinese and coolies; and it has recently been declared unconstitutional by the Supreme Court of this State.

We know of but one serious objection why capitalists should fear to invest in our rich gold, silver and copper mines, and this may be summed up as follows: The pernicious system inaugurated here of establishing immense companies with thousands and millions of dollars for the stock, predicted upon the belief (not upon scientifically explored mines or mining districts) of reputed rich leads or veins, with the view of throwing upon the com-

munity a handsomely printed certificate of stock, without the shadow of security. And here we may remark that the laws governing mining companies or individual miners are not by half stringent enough, and very much requires amending. The amount of work to be done on mines to secure possession, is not enough, and special legislation must soon intervene.

The quartz mines in the Pacific States are chiefly worked by inexperienced persons, and when two or more parties intersect their claims or approach towards each other in their tunnels, endless litigation ensues, and oftentimes bloody contests result, thus ending with the destruction of much life and property. Special laws require to be passed either by Congress or the State Legislature, providing for a corps of mining engineers, geologists and mineralogists, whose duty it should be to examine every such claim in dispute, and their decisions should be evidence before the Courts.

Notwithstanding these disadvantages, which are merely the result of inexperience and circumstances, ushered into existence within the past few years, no country in the world has ever presented a greater field for acquiring wealth, as the Pacific States. The gold and silver extracted from one or two counties in Nevada Territory during the past year has amounted to over one million dollars per month; and, from present indications, it will not fall short of three times that amount in a year hence.

## A GOOD MOVE FOR POOR INVENTORS.

An excellent move has been made by one or more of our citizens to establish a scientific association and stock company, for the purpose of aiding inventors and discoverers in bringing before the public valuable inventions, which is to operate as follows: The society shall consist of a number of stock or shareholders, the amount of which shall be established at the adoption of the constitution, payable in monthly instalments or dues thereto. The association will after a sufficient amount has been paid in, acquire with this means all the apparatus, utensils, machinery, library, etc., requisite for making models, testing and making experiments, and complete the ideas of inventors who may not have the means to do this themselves. The association is to undertake, after a satisfactory examination of the invention, and obtain a patent therefor, subject to conditions made between the inventor and the association; and from the proceeds and emoluments of such inventions, the society expect to receive dividends, at the same time furthering the interest of the poor inventor.

On next Friday evening, at 8 o'clock, a meeting will take place at the Mechanics' Institute, when a full attendance may be expected.

## BAD MANAGEMENT IN CONDUCTING FAIRS.

We have repeatedly stated that the conductors or directors of State and district fairs and exhibitions, do very little towards encouraging science, arts and manufactures. It is a fact well established that thousands of dollars are made up in purses for the best cow, calf, horse, etc., which requires scarcely any science or skill to produce, when compared with a useful and novel piece of mechanism, which may have taken years of thought and labor to finish, and the application of which would cause economy of time, labor and profit. The most an artist or mechanic may expect for his skillful production, is a diploma, or a medal probably not worth \$5!

The various associations abroad have been noted for encouraging the sciences and arts; hence the mechanic and artisan have an incentive to produce inventions which will hand down his name to future generations, and the advantages arising from his production may prove beneficial to the whole human race! We can only account for this shortcoming by surmising that the mechanic and artisan are not solicited to take part in the organization and proceeding of such associations.

**CALIFORNIA QUICKSILVER.**—Without quicksilver very little gold could be obtained from the mines of any country. This metal is a most subtle searcher for gold. Quartz, in which not a trace of gold could be observed by the naked eye, has been made to yield \$250 to the ton of the genuine metal, and all by the quicksilver "licking it up" and forming it into a pasty mass. Quicksilver is to the miner what steam is to the engineer. California possesses extensive quicksilver mines, from which she not only supplies not only supplies her own miners, but furnishes the liquid metal in large quantities for the miners of many other countries. The exports of quicksilver from San Francisco since January 1st up to August 1st, have been as follow:

China, -	8,674 flasks	Peru, - -	1,258 flasks
Mexico, -	7,837 "	England, -	1,000 "
Australia, -	1,050 "	New York, -	625 "
Chili, - -	1,009 "	Vancouver, -	99 "

Total, - - - - - 21,552 flasks  
The Chinese use mercury for making that beautiful pigment vermilion.—*Bell's Nautical Magazine.*

**THANKS**—To our Honorable Representatives A. A. Sargent and T. G. Phelps, for Patent Office Reports on Agriculture.

## SUMMARY OF MINING NEWS

## CALIFORNIA.

A certificate of incorporation of the "Peninsular Mining Company" was filed in the County Clerk's office last week. The object for which it is formed is declared to be "the business of mining for gold and silver, and extracting the metals from quartz and sulphurets, and dealing in gold and silver mines, ores and merchandise." It is further specified that the principal place of carrying on said business operations will be "the scope of country known as Lower California, Republic of Mexico," and that the business office will be in the city of San Francisco. The time of its existence is placed at twenty years, and the amount of its capital stock \$480,000, divided into 480 shares of \$1,000. Its Trustees are seven in number, and their names are—Nathaniel Gray, Wm. Carman, R. J. Nichols, J. P. Ostrom, J. H. Atkinson, Hugh Logan and Nathaniel Page.

The "Santa Rosa Gold and Silver Mining Company," also, filed a certificate of incorporation in the County Clerk's office last week, which sets forth that it is incorporated for the purpose of extracting gold and silver from ores in Virginia district, Nevada Territory. The capital stock is placed at \$1,200,000, in 2,400 shares, of \$500 each. George A. Hudson, John Dykeman, Nelson Hudson, Gardner Elliott, and H. E. Green form the first Board of Trustees.

TEHAMA.—Mr. John S. Butler, brought to our office yesterday, says the Red Bluff Independent, two large specimens of a compound crystallized sulphur, alum and other mineral substances, a large basin of which mineral compound was discovered by E. R. Morgan a few days since at the head of Mill Creek, near the foot of Lassen's Butte. It is a singular compound, and, according to the description of the place given by Mr. Morgan, is worth a visit from the student of natural curiosities. Mr. M. says that immense beds of pure sulphur are to be found in that vicinity, as well as boiling springs and other wonders of nature.

NEVADA.—The Union company, composed of five Irishmen, working the bed of Deer Creek, a quarter of a mile below Soggs' mill, says the Nevada Transcript, took out a nugget on Thursday weighing fourteen ounces. The claims were abandoned in 1856, but now pay the workers ten dollars per day.

PLACER.—The assessment district of Auburn, Placer county, contains 68 square miles. The gold dug there in a year, according to the Assessor's estimate, is worth \$425,000, and is sold for \$16 50 per ounce on an average.

## NEVADA TERRITORY.

The *Silver Age* of the 5th inst, thus holds forth :

No one—not even the oldest residents here—could surmise their real extent or fabulous richness; no one yet can bring himself up to a just conception of their vast wealth now, or what they will be a few years hence. It is impossible, because there is no parallel or premises from which to reason. People are astounded that a desert country like ours, but three years ago almost uninhabited, now contains more than twenty thousand inhabitants; has cities of two and three thousand people; mills in great numbers, of unequalled size and productive capacity, and mines yielding at least twelve million dollars per annum, while nine-tenths of the really valuable claims are not yet developed. Our progress has been wonderful, but we, ourselves, cannot believe or surmise what mighty strides we will make in a few years to come. In three years we predict that our Territory will have a population of at least one hundred thousand; will have cities of ten thousand inhabitants, and produce bullion at the rate of fifty million dollars per annum. This may be extravagant, but we believe it will be rather under the mark than over it. No one can now accurately guess at the future magnitude of our progress, because not one in a thousand gives to the mines their true value, or adequately comprehend their vast wealth. As the truth gradually dawns upon the public mind there will be a corresponding expansion of ideas until the whole truth is revealed, or until the fountains of our wealth have astounded and bewildered even ourselves.

Considerable excitement has been manifest about the Clear Creek mines during the last week. The Georgetown Company have located the first north extension from the Porto Plata Co's claim on Porto Plata Lodes Nos. 1, 2 and 3. The Break of Day Co. have located the first north extension on the Gilead Lodes Nos. 1, 2, 3 and 4, the Syrian Lodes Nos. 1, 2, 3 and 4, and the Barcelona Lodes Nos. 3 and 4. The El Dorado Co. have located the first north extension on the Barcelona Lodes Nos. 1 and 2. The

Henry Clay Co. have located the first north extension on the Vesuvian Lodes Nos. 1, 2, 3 and 4, and the Old Town Co. have located the first north extension on the Mohamadan Lodes Nos. 1, 2 and 3. There are some fifteen tunnels now running into these mines about Clear Creek, and from the rock shown therefrom, and the fact that a steam mill is now being constructed for the purpose of reducing the ore, we are of the belief that good and reliable mines are found near to Carson City. We have seen an assay of Max Zorer No. 1 rock, showing \$76 47 in gold and \$1,232 42 in silver—\$1,338 89 per ton. Also assays from Max Zorer Nos. 2 and 4, which show from \$527 to \$550 per ton, and one assay from Mt. Moriah Lode No. 2 as high as \$415 per ton. These assays are all made from rock taken at from two to ten feet from the surface. These mines are only about three miles from Carson City, with a good graded road direct to them; having the advantage of water-power sufficient to propel thirty mills with one hundred stamps each; timber for the mines; lumber for the mills, buildings, etc., and thousands of cord-wood at from two to three dollars per cord—all about these mines, affording advantages which none others have in the Territory.

The mill, formerly Stewart & Hennings, is now owned by Messrs. Raymond & Thompson, who have torn out all the old apparatus and put eight seven inch tubs in, with a view of working ore by the "sage brush process." They have also two of Wheeler's new invention of amalgamators, which they have put up for the purpose of testing as to their adaptability and utility in saving metals both of gold and silver. We have the authority of Mr. Hess, a gentleman of much practical experience in such matters, for saying that they are not only a success, but are destined to work a complete revolution in the mode of amalgamating, throughout the silver mines. This mill is running from eight to sixteen of the twenty-four stamps, but has not tubs enough yet to put the mill to its full capacity. They took out 91 pounds of bullion last week; it was the product of 40 tons of the third class of Ophir rock. Such a rock was formerly counted as "refuse," but since the introduction of appropriate machinery and reliable modes of working silver rock, it pays remarkably well, and gives another assurance that we have millions of tons of pay rock in ledges partially abandoned, and in rock which has heretofore been "dumped" away as useless. The mill is now in excellent condition and will, undoubtedly, give good satisfaction to the owners and the public. Its capacity, when completed, will be about 25 tons per day.

The Ellsworth company's mine, situated about a mile south-east of Silver City, is turning out a large amount of good and some first-rate ore. In one apartment they got about three tons per day of ore that will pay \$150 per ton. This is kept by itself while all the rest goes to the mills just as it comes from the mine.

Mr. Welch has commenced work on the great Ophir tunnel, which is to strike the ledge one thousand feet below the surface.

ESMERALDA.—The *Star* of the 13th inst. says: Last week the following mining companies were incorporated, and the articles sent on to be filed in the office of the Secretary of State:

The first North Extension of the Winnemucca Gold and Silver Mining Company, 1200 feet; 1200 shares; capital stock, \$120,000. Trustees, Dr. John Ives, Geo. Smith and E. O. Taylor.

The Colonel Corcoran Gold and Silver Mining Company, 600 shares, \$60,000 capital. Trustees, P. G. Vibbard, T. McLaughlin and B. S. Mason.

The George Emmett Gold and Silver Mining Company, 600 shares; capital stock, \$60,000. Trustees, Dan. Morgan, B. S. Mason and P. G. Vibbard.

The Vibbard Gold and Silver Mining Company, 600 shares; capital stock \$60,000. Trustees, same as preceding company.

The Doyle Gold and Silver Mining Company, 600 shares; capital stock \$60,000. Trustees, John Doyle, B. S. Mason and P. G. Vibbard.

The Isaac Gold and Silver Mining Company, 600 shares, capital stock \$50,000. Trustees, Robert Isaac, B. S. Mason and P. G. Vibbard.

## Mineral Wealth of Plumas County.

Few, even of our own citizens, are fully aware of the incalculable wealth of Plumas county. In the early days of California the class of miners who came to this county, was in no wise different from that which diffused itself throughout the mining regions of this State. Placer and river diggings were all they sought after—each one was anxious to make his "pile" add then return to the Atlantic States—they came but to ravish the country and then desert it. But many, very many, soon learned to love the land they came to destroy. And these cast about them for a more permanent location than was afforded by the shallow surface claims, which could be worked out in a few weeks. Then it was that hills and deep diggings were tried—tunnels were run, and long ditches dug, at a great expense, for the purpose of conveying water along the sides, and even up to the tops of the hills; hydraulic power was used to detach the earth and debris from the precious metals; and a new era in mining was inaugurated. The Mount Pleasant, Spanish Ranch, and a number of other ditches of lesser note were constructed between '53 and '58, and the hills of Plumas were forced to surrender large quantities of their long hidden treasure to the industrious and enterprising miners and ditch owners—and Plumas was in a most flourishing condition until the Fraser River excitement broke out in the summer of '58, when many of our nomadic miners left their valuable claims to seek new fields. But the majority of those who left were in the condition of the dog in *Æsop's Fables*, which was crossing the stream on a log, with a piece of meat in his mouth, and seeing his own shadow in the water, let go the piece he had and jumping at the shadow, lost what he possessed and found nothing in return. Hundreds soon returned, and Plumas county began to be more thoroughly prospected. It now became evident that the numerous quartz lodes in which our mountains abound contained untold treasure. Washoe had been discovered with her fabulous wealth—and this gave a new impetus to this system of mining, and men turned their attention to developing the quartz lodes of our own county: their efforts have been crowned with such success that this county, at no distant day, is destined to become one of the most important mining counties in the State. Already the Eureka, Mammoth, Seventy-Six, and other quartz lodes, have been prospected and found to be rich. The Ellis ledge was discovered in Round Valley, and it was found to be but one of a great number of equally rich lodes in the same locality. Rich gold and copper lodes were discovered in Genessee Valley—and now we hear of new and valuable gold bearing quartz lodes being discovered at Rush Creek, Rich Bar, Taylor's Creek, Indian Valley, Nelson Point, Twelve-Mile Bar, and, in fact, nearly every other portion of this county.—*Standard*.

THE COLORADO MINES.—The area of the Colorado mines is extending, and is supposed to embrace the Apache country, in which event the white prospectors will eventually bring on an Indian war. The first mines are in the foothills skirting the Colorado river, and several miles from the stream. The gold is gathered by dry-washing, water being so scarce that it is packed from the river or from wells for drinking purposes, and sold for 15 and 25 cents a gallon. A town called Olivia, after Miss Olive Oatman, the Indian captive, has been laid out, and contains about a thousand inhabitants. Gold rates at \$16 per ounce, but is said to be worth \$19. A Recorder has been elected. No Chinese, Indians or negroes are allowed to take up lots. The new community may be regarded as the corner stone of a permanent settlement in that region.

The certificate of incorporation of the Moss Gold and Silver Mining Company was filed in the County Clerk's office on the 18th inst. Their mine is in Story county, N. T.

TANNING.—No less than 200,000 hemlock trees are annually cut down in the United States for tanning purposes

## Mental Epidemics.

In *Frazer's Magazine* for April, this year, speaking of mental epidemics, an article concludes thus:

The question of course suggests its If. What probability is there of a period of recurrence of popular delusions such as these to which we have here adverted? What security against them is afforded by extended education and advancing civilization? In our opinion, we do not hesitate to confess it, none whatever; not even were education as generally diffused as it's most ardent advocates would desire. It is at least a significant fact that Scotland and America, the two countries in which education is perhaps more general than in any other, have been foremost in these outbursts of fanaticism, and have rivalled or even outstripped Ireland in the length to which their extravagances have been carried. Most people have by this time surrendered the once popular tenet that superstition and fanaticism were to be forever dispelled by the light of science.

Education and so-called general enlightenment are, in truth, utterly powerless in the presence of spiritual emotions; even the growing skepticism of the day offers no bar to them, if it does not actually prepare men's minds for them. It is true that most of these delusions, of later years, especially, have been restricted chiefly to the lowest and least educated classes; but a little reflection can scarcely fail to force upon us the conviction that the higher and better educated have owed their immunity rather to accidental circumstances, and the peculiar forms which these delusions have assumed, than to any security conferred upon them by their position and mental cultivation against the grossest absurdities of credulity and superstition. Recent experience, indeed, has given much countenance to Dr. Babington's remark, that "among the educated classes the affluent are more credulous than those who are dependent on their own exertions for support." It is a point in which the extremes of society might be said to touch. The wilder forms of superstition and fanaticism have flourished at one end of the social scale—the scarcely less extravagant follies and absurdities of mesmerism, table-turning, and spirit-rapping, have found their dupes in the other: the intermediate class, the merchants, tradesmen, and, speaking generally, the members of the learned professions, in this country, at any rate, have been uninfluenced by either. We do not remember anything less creditable to the good sense and intelligence of English society than the belief in table-turning, so general a few years ago. Spiritualism, which bids fair to take its place, involves graver questions, though its pretensions appear to us to be abundantly refuted by its own monstrous absurdities. But we must not enter into this subject; possibly we may recur to it on some future occasion.

## The New Ironsides.

The iron-clad frigate is so far advanced that she will make a trial trip on Monday next, after which she will be taken to the Navy Yard and dismantled before proceeding to sea. On Saturday the engines of the frigate were in operation, and worked satisfactorily. Her machinery is of great power, consisting of two horizontal direct-acting engines, with cylinders of fifty inches in diameter and thirty inches stroke, intended to make 85 revolutions per minute, and to drive a brass four-bladed propeller, of thirteen feet diameter and eighteen feet pitch. The boilers are four in number, known as horizontal tubular, each being seventeen feet front, eleven feet deep and eleven feet high, of a collective force of 1600 horses. Though the boilers and machinery and coal bunkers occupy considerable space, there is ample room for the officers' quarters and the accommodation of the crew. The *New Ironsides* has but three decks—the orlop deck, in consequence of the high draft of the frigate, being dispensed with. On the spar deck the circles have been laid for the pivot guns, and the joiner's work is in a very forward state. A number of joiners are at work on the gun deck, fitting up the captain's quarters, which are spacious and well lighted. No other officer is allowed a cabin on this deck, but all, from the lieutenant down, are quartered on the berth deck. The cabins of these, with the ward rooms, are ready for occupancy. The total number of officers on board the *New Ironsides* is about thirty. These include the commander, lieutenants, masters, surgeons, chaplain, engineers, lieutenant of marines, midshipmen, master's mates, paymaster and clerk, boatswain, gunner and carpenter.

Though the *Ironsides* is the same tonnage as the *Wabash* she will not carry as large a crew, inasmuch as she is to be dismantled before going out. The armament of the frigate, consisting of sixteen 11-inch Dahlgren guns on the gun deck and two 200-pounder Parrott guns on the spar-deck, has been received at the yard, and will be put on board as soon as the iron carriages are ready. This week she will receive her coal and ordnance stores.—*Phil. Ledger, Aug. 4.*

**SNOW SPOTS ON THE EASTERN SLOPE.**—As an evidence that the last was an unusually severe winter, we may mention that large fields of snow are still visible from Carson City, a circumstance which has not occurred on the 1st of September for many seasons. Some places in these snow fields are said to be 20 feet deep yet, so that there is no probability that the snow will melt off this season.—*Silver Age.*

## EDITORIAL CORRESPONDENCE.

Tour through Sacramento, Folsom and Lincoln.  
PLACERVILLE, Sept. 15, 1862.

We left San Francisco elated with the hope of breathing once more the salubrious mountain air, and bid adieu for a short while to the bleak winds, sand and dust of our great metropolis. It has its charms as well as its ills, and we chose it "for better or for worse." The Chrysopolis, that floating palace, glides swiftly through the bay and up the Sacramento, where we arrived after a sound "snooze." The thermometer must have been 110° F. at the capital, which makes everybody puff and blow. Sacramentoans, despite their late reverses, seem buoyant and sanguine of their future; and that Eden seems again in its wonted splendor, abounding in luxuriant gardens and shade trees throughout the suburbs. After a short sojourn at the crack hotel, the Ebner House, we took leave of our friends, and "rolled on heavily" towards Folsom. Mine host, that social "cuss" of the Patterson House, received us well and hospitably. The insufferable heat does not seem to abate, and we were compelled to have recourse to our white donnings, which caused us immediate relief. Folsom, as will be seen elsewhere, is one of the most prosperous towns in this State, presenting many natural advantages to the enterprising; but its present population seem anything but literary, scientifically inclined, or willing to listen to matters pertaining to their benefit or advantage. Through a polite invitation, we attended the organization of a new Odd Fellows Lodge at Lincoln, Placer county, entitled Valley Lodge No. 107. The services occupied "all night till broad day light," with dancing and collation, wine and toasts. Lincoln is the terminus of the C. C. R. R., a very pleasantly situated town, seemingly in a prosperous condition. Stages in every direction wend their way from this point. Teams and conveyances are laden with freight and merchandise through the well-known forwarding houses at that place. Hotels and accommodations are ample. The surrounding country is thickly settled and the agricultural pursuits are flourishing.

We leave it, and take our departure for Placerville, El Dorado county, and the usual courtesies are denied us by that opulent stage company. We are somewhat disappointed at the bad state of the roads at this season of the year. Mining is being prosecuted with but little energy—here and there only are claims being worked: the majority have no water. Placerville is a splendid mountain city, surrounded by verdant hills and mountains, many of which are being worked for their metallic riches, paying handsomely to their enterprising owners. Although mining has been but superficially carried on, and is by many miners believed to be "played out," which is far from being a fact. Little work seems to be done with quartz, although it seems to abound in this vicinity, and would readily yield from \$15 to \$20 per ton. The Pacific Quartz Mill appears to be the only successful establishment of the kind here. The placers, ravines and gulches still pay moderately good wages where water is abundant.

The city of Placerville contains from 5,000 to 6,000 inhabitants. It is situated in a valley, divided into Upper and Lower Placerville. It is the entrepot of San Francisco and Nevada Territory, where all the travel and freight seem to form a centre and stopping place, and where the great trunk of the Pacific and Atlantic Railroad must come.

The great thoroughfare, Main street, is neatly laid out, and substantial buildings and edifices are studded symmetrically thereon, which for architecture and convenience do not fall short of San Francisco structures. We were agreeably surprised to find the Cary House the first hotel in this city, in every respect equal to the Lick House of San Francisco, in all its appointments. The affable proprietor, Mr. Cullen, has but recently returned from the Atlantic States, and is now the sole proprietor. This hotel contains 80 spacious apartments, capacious halls, beautiful parlors, dining saloons, etc., all of which are well ventilated, and provided with gas. The Cary House is a three story fire-proof brick edifice, situated on Main street, Lower Placerville. The chief business is carried on in Lower Placerville, where all commerce, exchange, postal and express matters are forwarded and transacted, and the stages and conveyances halt and take their departures.

J. S.

Mr. Lapone has just completed the erection of another quartz mill at the intersection of the ravines in Silver City, and just opposite the McNulty mill. It is presumed that the entire winter will be consumed in building this mill, and that it will be another of our first class productive agents.

## SUTTER PIONEER TESTIMONIAL FUND.

At a meeting of the Society of California Pioneers, held to celebrate the Twelfth Anniversary of the admission of California into the Union—

At the conclusion of the address of E. H. Washburn, Esq., Dr. Henry M. Gray remarked that as there was an unusually large number of the Society present, it was a fitting time to consider informally some important suggestions embodied in the remarks of the orator of the evening.

That portion of the address having direct reference to General John A. Sutter, then elicited an interesting discussion. Mr. Sam. Brannan then gave an account of a recent visit to the old Pioneer, and others warmly advocated the adoption of immediate measures for his relief. H. F. Williams offered a series of resolutions to this effect, to which some amendments were proposed. Subsequently the Society appointed Mr. Williams, W. B. Farwell, Dr. Gray and Rev. Albert Williams a committee, to revise the same, who reported the following, which were unanimously adopted:

WHEREAS, The Society of California Pioneers are desirous of presenting to General John A. Sutter a substantial mark of their attitude to him for his many good and charitable deeds towards the early settlers of the State, and of the esteem in which he is held by his fellow-citizens at large: therefore,

*Resolved*, That a committee, consisting of all the ex-Presidents of our Society, be, and the same are, hereby constituted a Committee to take the matter in charge, to appoint sub-committees, and prepare subscription papers, to be circulated for contributions to a fund to be judiciously invested for Gen. John A. Sutter.

*Resolved*, That the President, Secretary and Treasurer of this Society, and their successors in office, be, and the same are, hereby constituted a Board of Trustees, to receive and invest all funds which may be received in furtherance of this object.

*Resolved*, That copies of these resolutions be forwarded to all the newspaper editors in the State, with the request that they will publish the same, and urge upon their readers the propriety of contributing something in aid of the fund.

We have been requested by the Committee, and it affords us pleasure to give place to the above action of the Society of California Pioneers. It is understood that Gen. Sutter, the most distinguished of the early settlers of this State, has, through the generosity of his nature, and that unsuspecting probity which always attends on conscious worth, been deprived by the shrewdness and trickery of unprincipled men, of the ample competency which he had secured for himself and family, by his early toils, hardships and labors, in the settlement and reclamation of this country.—Insomuch, that his condition is now said to, be one of almost absolute want and destitution.

General John A. Sutter may be, in fact, considered as the Pioneer of California. It was he who received so cordially and treated so hospitably at his fort, on the Sacramento, the first expedition of citizens of the United States to this coast, made by Col. Fremont, in 1846. Fremont, in his Journal, speaks of him in highest terms of commendation. It is, therefore, exceedingly appropriate that the Pioneers should do him honor, and, if need be, give him aid in this his hour of trial and distress. He received and kindly fed and sheltered our worn-out and famishing countrymen, debilitated and exhausted by the sands of the desert and the snows of the mountains—at a time, too, when relief was salvation. It was also from him that much useful information was obtained by the first explorers, relative to the character of this country. It was, too, at Sutter's mill, it will be recollected, that the first gold was discovered in 1848; and hence the joyful news went forth which startled the nations, as it were, from the lethargy of ages. It was in digging the race at Sutter's mill that the first discovery was made which has in the course of twelve short years, placed California by the side of old and populous States.

Who, then, will not say, "All honor to the good old chivalrous Pioneer?" It may be well said that this State is more indebted to him than to any other individual in its wide circumference. We then say, God speed to the good work; and all honor to the noble Pioneers who have set this ball in motion.

**LACE MANUFACTURE.**—The growth and importance of this branch of industry may be learnt from the statements made by Mr. W. Felkin in 1856. He calculated that the returns from the Lace Manufacture exceeded £4,000,000 a year, the number of hands was 135,000, and of machines employed 3500. The machines are now estimated at 4,000. By the original mode of making lace upon the pillow, five meshes of "plain net" could be made per minute; 40,000 meshes per minute can now be made with ease. In 1813 the price of the finished pieces was 40s. the square yard; in 1856, 6d.

## LAND FOR THE MILLION.

If any man is in the possession of a tract of land of not less than 40 nor more than 320 acres of land, or knows where there are such tracts that he would like to purchase, that are not owned or possessed by any other person, the following information may be both useful and desirable:

The United States system of surveying divides the State into squares of six miles each, called Townships, and subdivides these into squares of one mile each, called Sections, as the following diagram will show:

6	5	4	3	2	1
7	8	9	10	11	12
13	14	15	16	17	18
19	20	21	22	23	24
25	26	27	28	29	30
31	32	33	34	35	36

By Acts of Congress, the 10th and 36th sections in each full township, and due proportions for the fractional townships, are donated to the State for common school purposes. And where the 10th or 36th section is included in a mili-

tary or other reserve, or in a private grant, the State has the privilege of selecting any other sections in the proper land district, in lieu of such reserved or appropriated sections.

By Act of the Legislature of this State, approved April 22d, 1861, sections 16 and 36 in each township, and other sections taken in lieu thereof, are authorized to be sold at the low price of one dollar and twenty-five cents per acre, in legal subdivisions of 40 to 320 acres.

When the purchaser desires, he can pay only 20 per cent. of the purchase money, and ten per cent. interest of the deferred payment, in advance, and the balance in one, two, three, or more years, as a future Legislature may determine.

In the San Francisco land district there are 600,000 acres of these school lands for sale; and, as over 200,000 acres of these sections 16 and 36 are included in private grants, other sections and parts of sections can be selected in lieu thereof.

If the particular township in which the land sought to be purchased is situated, has been "sectionized" by the United States, then all the applicant has to do is, to make application direct to the State Locating Agent in San Francisco, who has blanks for the purpose, containing the following certificate, which has to be verified by the applicant:

"I, \_\_\_\_\_, of \_\_\_\_\_, being duly sworn, depose and say that I am the applicant for the purchase and location of the above described lands; and that, to the best of my knowledge and belief, there is no valid claim existing upon the land so described adverse to the claim I hold and apply to be located; and that there is no improvement of any kind or description upon said land, other than my own."

A similar certificate, as to the claim to the land has to be made by two witnesses.

The application being signed and sworn to, the Locating Agent then makes application to the Register of the United States Land Office for the land sought to be purchased, and on his acceptance of the same, the application of the party and also the acceptance of the Registrar of the United States Land Office are forwarded to the U.S. Surveyor-General at Sacramento, who, on examination, and if found correct, approves the same, and returns his approval to the applicant, who, on its reception, and within fifty days from the date of the Surveyor-General's approval, pays to the Treasurer of the county in which the land is situated, either the full amount of one dollar and twenty-five cents per acre, or 20 per cent. of the purchase money, and 10 per cent. interest on the deferred payment as he may prefer.

If the quantity of land applied for is 160 acres,

and he prefers the 20 per cent. payment, it will be as follows:

160 acres, at \$1 25 per acre, is.....\$200 00  
20 per cent. of this amount is..... 40 00—\$40 00

Leaving a deferred payment of.....\$160 00  
And 10 per cent. on this amount is..... 16 00

Making the first payment for the year.... \$56 00

At the end of a year he pays \$16 more, and so on each year, until he chooses to pay the balance, or the Legislature shall direct it to be done by law.

In case the land sought to be purchased is situated in a township that has not been sectionized by the United States, then the person desiring to purchase makes application to the County-Surveyor or of the proper county, desiring him to make a survey of the particular tract selected; and when made he delivers to the applicant a certificate containing a plat and field notes of the tract, which he presents to the Locating Agent, and then the proceedings are the same as before.

The law requires that no less than 160 acres shall be applied for at the United States Registrar's office, yet two or more persons may apply at the same time to the Locating Agent for tracts of 40 acres, or more, that lie contiguous, and in the aggregate make 160 acres.

LEANDER RANSOM,

State Locating Agent San Francisco Land Dist.

materially augmented—a great amount of capital will be invested, and the miners, and the working classes generally, can find no better field than this new Territory. Humboldt district is coming out finely, and bids fair to exceed even the section known as Washoe. But bullock of any amount has not yet been received from that quarter. Esmeralda interests seem to revive with celerity.

## NEW PUBLICATIONS.

PANE'S AGE OF REASON REVIEWED, by Wm. H. R. Wood, Esq. This little pamphlet purports to be a defence of Christianity against the attacks of infidelity. The author reviews the subject with considerable ability, but we doubt much whether he can win back the unbeliever who reasons, by means of arguments he may bring to bear against such a work as that which he attempts to refute.

NEW LAW JOURNAL.—A new octavo pamphlet, entitled *California Law Journal and Literary Review*, made its appearance yesterday (Monday). Dr. Wm. H. R. Wood is the editor. The people of California, certainly, cannot complain of lack of reading. Three or four periodicals have sprung into existence within the last fortnight. We can scarcely believe all these publications will be sup-

SEAM DIGGINGS.

The annexed illustration presents a rough idea representing the mode of mining in hill seams bearing rich deposits of gold. In the county of El Dorado, at a place called Spanish Dry Diggings, in the foothills of the Sierra Nevada, immensely rich hill claims have furnished fortunes. The nature of the deposits is simply corroded quartz of an opaque color, ranging from red to black, and remarkably soft and friable. The fissures or veins run at about an angle of 45°, and lay parallel to the layers of quartz or rocks composing the hills. A strange feature particularly observed is, that the veins on the western side of the hills are only metallic bearing, while those on the eastern side are entirely devoid of metals. In the year 1859, two Kentuckians realized 65 pounds of nearly pure gold per day for a period of ten days. Mr. G. W. Hunter is now the lessee. Several important claims are located in this district. Mining is carried on by making tunnels in the direction of the seams, and the ore is then washed into the sluices. Dr. Stone, of Georgetown, is the proprietor of the dig company in that district. Among the noted claims are—Mr. G. W. Hunter's claim, the Griff claim and the Pennsylvania claim, all of which are doing well.

## THREE MILLIONS OF BULLION PER MONTH!

The Territory of Nevada, that great and wealthy gold and silver spot, scarcely marked on the geographical maps of Europe, will furnish no less than \$3,000,000 in silver and gold per month shortly. From the number of companies and associations recently formed in this State and Nevada Territory, the amount of bullion must be

ported: the sale for the best of them must be limited: if they compensate for the money, time and labor necessarily expended on them, they will do better than we anticipate. In fact, we lack the population. Of our 500,000 inhabitants, only one-hundredth part are strictly a reading class—and the majority of these are amply provided with Atlantic and European journals. Besides, every county in the State has an exponent in the shape of a newspaper, many of which are ably edited.

LINCOLN, PLACER COUNTY.—A few days since we visited this prosperous town, it being the terminus of the California Central Railroad. The town is symmetrically laid out, and promises to become the city of Sacramento Valley. Commercially speaking, Lincoln presents many advantages over other noted places in the vicinity of Sacramento, and the leading forwarding and commission houses seem to be up to the importance thereof. Already the current of freight is wending its way in that direction, and the amount of travel is considerable. Stages leave there for every direction in the State and for Nevada Territory. We should like to hear of the finishing of the railroad to Marysville. When this shall have been accomplished, we bespeak for the people of Lincoln a great achievement.

THE NAUTICAL MAGAZINE, by Capt. Bell, is out for October. It discusses some interesting matters pertaining to nautical affairs—commerce, insurance, and instruction to seamen.

WM. W. DUNN'S PATENT ROCK DRILL.

The accompanying rock drilling machine is an ingenious invention, particularly valuable to the quartz miners on the Pacific Coast. The engraving, though coarse (it not being executed at our office), yet presents the machine sufficiently plain and comprehensive. The inventor is Mr. Wm. W. Dunn of this city.

One man with this machine can do the work of about four men in the ordinary way. It is portable, made entirely of iron, and weighs about 80 pounds. Its principal use is in mining operations. Placing the machine in the shaft or tunnel by screwing out the screw on the end of the expanding stanchion on which it is supported, and thus bracing it firmly between the top and bottom, or

one end—with, at the other end, standards supporting the drilling machinery, by which the drill can be operated horizontally, perpendicularly, or in any direction. The drill has a regular turning motion, at each blow, feeds forward fast or slow, (at the option of the operator,) as the character of the rock requires: the rate of advance can be varied instantaneously. The blow is struck by the drill being drawn back by cams, thus compressing a cylindrical indiarubber spring, which expanding projects it with great force. The number of blows per minute is only limited by the durability of the steel drill, 120 blows is the usual rate. These machines can be operated by hand, horse or steam power. A 4 horse power engine operated by one man drives a machine capable of drilling 4 to 6 inch blast holes, 4 feet deep in

sides of the tunnel, one man can with ease work the machine and turn the crank 40 times per minute, and the drill strikes three blows for each turn, giving 120 blows per minute. This machine has been successfully tested in the Eastern States and this State, where the hardest rocks abound.

This machine occupies so little space that in a tunnel five feet square two of them can be worked, equivalent to eight men, when but two can work in the ordinary way—not only a great saving in cash expenditure, but also of time, is effected.

A one horse power machine performs the labor of 12 men.

Mr. Dunn is also the agent for Mr. Gardner's patent of a portable steam engine, to be used in connection with the above drill. It consists of a truck frame on wheels, bearing a steam engine at

granite, or 6 feet in hard limestone, per hour.

The cost of drilling the holes is reduced to one-tenth the present expense, while the whole saving on a rock excavation of any extent, cannot be less than 50 or 75 per cent, on the entire work.

The one horse power machine performs the labor of twelve to thirteen men, in driving bed-rock tunnels and open cuts. It is worked by atmospheric pressure and ventilates the tunnel at the same time.

The hand drill is another form of machine, by use of which one man can do the work of three. It is expressly adapted for tunnels, galleries, shafts, etc.

For particulars address Wm. W. Dunn, Fremont street, near Market, San Francisco.

TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Title of Company and names of officers for the year.	Am't of stock & value per share.	When incorporated
--	----------------------------------	-------------------

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.
-----------	------------------------	--	------------------

Routes and Fares from San Francisco to Foreign and Domestic cities.

*Pacific Mail Steamship Company*—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

*Nicaragua Steamship line*, Rosa, Dempster & Co., agents. —Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

*California Steam Navigation Company* dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petaluma, \$3.

*Overland Mail Company*—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

THE NORTH PACIFIC REVIEW.—This quarto monthly made its debut on the 1st inst. The work is neatly printed; it contains a well executed and life-like engraving of the late James Donahue, Esq. The reading matter, both original and selected, is choice, and will prove interesting to the general reader.

LEANDER RANSOM,

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

STANFORD BROTHERS, Pacific Oil and Camphene Works, Office and Store, No. 48 Front street, near California, San Francisco. m16

[From the Silver Age]

Letter from our Commissioner to the World's Fair.

The following letter has been received from the Commissioner of Nevada Territory to the World's Exhibition, London, by his Excellency Governor Nye, to whom we are indebted for a copy for publication. It will be remembered that our Legislature at its last session made an appropriation of five hundred dollars to defray the expenses of a Commissioner to represent our Territory at the Great Fair; a sum insufficient, as was understood at the time, to cover the cost of travel alone, to say nothing of the other expenses of any one undertaking the journey. But our Legislature, in view of our many home wants and the slender revenue of the Territory, did not feel warranted in making a larger appropriation at the time. That it would have been good policy to have sent on at least two or three well selected men accredited to that mission can hardly be questioned, judging from the tenor of this letter. Finding no other competent person willing to make the journey at so great pecuniary sacrifice, Governor Nye appointed Mr. Joseph Mosheimer to the Commission. The selection was a good one, this gentleman being an old resident of Washoe, and thoroughly acquainted with its wants, resources and future prospects, besides being a practical metallurgist and owner in our mines:

LONDON, June 22d, 1862.

Gov. J. W. NYE—*Dear Sir:* In my last letter to you I mentioned my visit to Washington, after which I proceeded without delay to my place of destination, arriving here on the 15th May. My first business was to ascertain who were the American representatives at the Exhibition, and found Mr. Holmes Acting Commissioner for the whole Department, which consisted of a place in the eastern corner of the building about the size of the Contra Costa Agricultural Rooms. Mr. Holmes endeavored to procure more room but without success. I found it difficult to get sufficient space wherein to place a glass case containing my Washoe collection of ores. I found some specimens of ores from our Territory already here, which together with my own made a very creditable show; and, I think, we can justly claim to have surpassed our mother State of California in this respect. She sends on three Commissioners, and has on exhibition only a small pump from Mr. Hansbrow, of Sacramento. The ores I have on exhibition are from the Ophir, Mexican, Gould & Curry, Chollar, Gold Hill, Sacramento Ledge (Silver City) and the Daney—being some of the richest samples ever taken from these mines. I have also a large specimen taken from one of the leads in the Esmeralda district, and a number from Humboldt. They excite much curiosity here, attracting the attention of moneyed and scientific classes in a special manner. Sir Rodrick Murchison, the first geologist of England, was much interested in the collection, and invited me to his house to have a talk about our Territory. Two days ago the Prince of Wales came to our court, and Sir Wentworth Dilke showed him our ores. I opened the case, handed him the several samples and explained to him their character. He examined them with care, thanked me for my trouble and departed, bearing himself in the most modest and unassuming manner.

It is a pity, both for the credit and welfare of our young Territory, that certain parties largely interested in her mines, did not see fit to act more liberally in the matter of sending on samples of ores and otherwise giving encouragement to the Exhibition. As an excuse for this narrow course of policy, the president of one of our mining companies assured me that he did not think it expedient to let the politicians have much light in regard to the riches of their mine. There are those, however, who would be greatly benefitted by having the value of their claims duly understood abroad.

Silver mining is awakening more interest in this country now than ever before. They have more confidence in it here than in gold mining, in which many were heavy sufferers by their trials in California.

The question is often asked what title have we to our mines. On being assured that they are on

Government land, every one is satisfied. They are afraid of the Spanish titles which have caused so much trouble in California. I am surprised to find how little is known about our Territory, not only here, but also in the Eastern States. They cannot credit the statement that we take out about a million dollars' worth of silver every month. This is because so little is said about the matter in the public prints, and all the precious metals raised in the Pacific States is accredited to California. There has been but little published about Washoe whereby the monetary and scientific world could be intelligently informed. Were our resources and situation well known here we could readily command the means for building a railroad to California, as well as all needed capital for opening and working our mines—a condition that would greatly increase the value of every species of property in the Territory. To illustrate how little is known of our progress, even among intelligent classes here, I may mention that I found it difficult to convince a gentleman who had examined our mines in 1861, that we had now fifteen hundred stamps running; because, as he said, it would take years to accomplish this. I only convinced him by showing a list of the mills now running or in course of erection in the Territory. There is not much useful machinery for mining purposes on exhibition here, and I am of opinion we could teach these people something in the business of gold working.

I am your Excellency's ob't serv't,

JOS. MOSHEIMER.

From the Coso Mines.

We copy the two subjoined letters from a late number of the *Visalia Delta*:

WILLOW SPRINGS, COSO, Sept. 15, 1862.

EDITOR DELTA:—I notice from your paper that the people of Tulare Valley have finally aroused to a sense of duty and interest by commencing a trail across the mountains from Visalia to this place, and other mining localities in this vicinity. It is only surprising that they have not done so long ago, for every observer must have known that Tulare Valley is the natural market for this whole country, if the roads and trails were made passable for freight trains and teams. The trade from the different mines on the Eastern slope is fast growing into importance and must, from all appearances, soon be immense. Large amounts of goods, &c., now come to us by the way of Los Angeles, which naturally should pass through Visalia.

The Coso mines are opening out in the most satisfactory manner. The Josephine lead has a shaft sunk on it about 75 feet deep, and the vein is much larger and richer at that point than any place above. There is no doubt that this vein is exceedingly rich. The Winoshick, Watab, Caledonia, Decow, Great Eastern, Great Western, and many other leads in this district, are turning out remarkably well. To work these successfully, silver machinery is necessary, and Mr. Hitchens, the owner of several of them, and the proprietor of the Pioneer mill in these parts, has started to San Francisco to procure a "process" and pans which will save the stuff that our veins doubtless contain.

The Lotta mills are doing a fine business crushing Josephine rock. Hitchens' mill is principally used in prospecting the various leads which are being opened in different parts of the mines—some of which will be heard from soon in a manner to astonish the oldest man in the community.

The Indian troubles have finally ceased to scare the timid or to retard our progress, from the fact that a military post has been established on Owens' river, and we all feel secure in our lives and property and the pursuit of happiness.

The news from Owens river is encouraging. The Union mill has started, and all looks well. Persons continue to arrive daily from the Slate Range and Argus districts, who bring with them unmistakable evidence of the boundless wealth of these places.

From the signs of the times, next summer will be a lively season on this side of the mountains—the sound of the quartz mills will be heard in one continuous clatter from one end of the range to the other, and the returns of the express men will

show that Tulare is not only the finest agricultural and grazing portion of the State, but that her shines are unsurpassed in any quarter.

Coso.

WHITE RIVER, Sept. 16, 1862.

MR. EDITOR:—Thinking that you may wish a little more information in regard to the extent, richness and locality of the late discovered gold mines (in quartz) on the north fork of Kern River, I embrace this opportunity of affording you all I can from actual observation, and from what I have heard from others on the ground. Shakspeare says "there is a tide in the affairs of men," &c. How beautifully true. It is an ever rushing current, which some try to stem, while others glide along in its eddies or down stream with ease, to that final destiny awaiting us all—no matter how good or bad the result, in the estimation of those who live, they must acknowledge the equality of the bone-yard: for with all our greatness we leave but little shadows behind. But whether it was flood or ebb tide that rushed me from the classic shades of Tailholt, over the rugged and romantic cliffs of Kern River, the future must determine in this letter. Perhaps it would be well to give you a description of the country passed through before reaching the mines, together with the events that incidentally transpired in a trip through a country so little known, even among ourselves, although perhaps of but little importance.

The first place of note after leaving White river is Linn's Valley, which shows unmistakable evidences of the late deluge. Acres which were last year covered with grass, are now strewn with drift wood and buried in sand. Still that does not mar the beauty of the valley, nor depreciate the value of the farms much. A change has also come over the spirit of its industrious and frugal inhabitants, for this year, at election, they gave a Union majority, where last year it was furiously and bitterly secesh. So much for the dawning light of civilization. The road completed last year by the Linn's Valley people over the Greenhorn mountain, is at the present impassable for wagons. Marsh's mill on the top of the mountain, is partially destroyed, and whether they will ever use it again for crushing quartz or not, is uncertain, as quartz mining in the neighborhood is for the present suspended. The view of the surrounding country from the top of the second summit, going towards Kern River, is grand. The river winding along through deep chasms, the mountains and abrupt declivities looming up towards the heavens, and covered with stately and silent pines, impresses the mind with the grandeur of nature and the power of God, and makes a picture impossible for pen or pencil to describe.

Greenhorn went Union this year—another change. The road from Greenhorn to Keyesville is very rough, though I passed people taking wagons with them and going to Owens River, and, from some little and big domestic evidences they had along with them, I think they will be comfortable over there. Upon my arrival at Keyesville I could not but notice the silence of the city, especially after living in the busy city of Tailholt. The cause is said to be the fact that all the inhabitants belong to the Good Templars. There are several business houses in Keyesville, also two hotels, at one of which I put up, without being asked if I had any baggage, or to pay in advance before sampling their hash. A liberal style—though in some places the landlords would consider it dangerous.

Now for the mines. After going up Kern river from Keyesville about nine miles, the first evidence of the new mines that attracted my attention was the quartz mill of Rogers, Caldwell & Co., on the north side of the river—a water mill. They were cleaning up the battery when I arrived, and obtained some thirty pounds of amalgam from rock crushed in four days, which I think is very good, considering that the capacity of the mill is only about three tons in 24 hours. The gold is worth \$15 an ounce. The rock has to be burnt before it is crushed to obtain the gold from it, as it is full of something that prevents the quicksilver from taking hold of it, unless it is burnt. [Sulphur, probably.—ED.] The most of the leads are within half

a mile of the mill of the first discoverers, but some are about two miles above and below. In the vicinity of the veins a person becomes surprised and interested to see such masses of rock on the surface, which have been walked over by the miners for years, without examination, for the reason that no quartz miner ever dreamed such stuff contained gold. It does not look like quartz, although the veins are well defined on the surface, and perpendicular, and varying from one foot to forty feet in thickness. The small veins, which they are now working, pay from \$100 to \$300 per ton. The 40 feet vein prospects, from three different runs of rock, \$16, \$19 and \$22 to the ton, across the vein. The rock is blue, close grained, and filled with grey sulphurets. The workers of the mines find it impossible to select the rock, as they would be as apt as not to select the poorest for the richest. One cannot see gold in the rock until after it is burnt, and little then. Men who are experienced in quartz mining say it pays more regularly than any rock they ever saw. Time and labor will develop the permanency and extent of the mines there, and if they run deep and continue the same in richness and thickness, this will be the richest quartz district in the State. The veins are all close to permanent water privileges. There will be three mills in operation before spring, put up by the owners of veins here, and I think it is a splendid opportunity for a company to put up a mill to do custom work, as there are thousands of tons of good rock in sight. They are continually finding new leads, which shows that there is still a good opportunity for prospectors. The prospects at Coso, from reliable authority, is really beyond the expectations of the most sanguine. No more at present.

YACOB.

### The Cary House, Placerville.

We present herewith an illustration of this first class and splendid hotel. This edifice was erected by Mr. W. M. Cary in 1857, and is eligibly situated on the corner of Main and Quartz streets. Eighty commodious, well ventilated, well

lighted and finely furnished apartments, with fine parlors, dining saloons and halls, are offered the traveling public. It is most centrally located, and adjoins Wells, Fargo & Co.'s Express, and is near the Post Office. John W. Cullen is the most affable and accommodating of hotel proprietors. Stages and conveyances leave daily from this house to all parts of California and Nevada Territory. The greatest care and attention are shown to the patrons of the house, and we found the terms as reasonable as could be desired.

**CURIOUS PETRIFICATION.**—The *Panama Bulletin* tells this curious story:

"It will be recollected that about four years ago, Mrs. Kearney, wife of the late Mr. James Kearney, died in this city. Her husband, at that time being a merchant in Aspinwall, had a zinc coffin made, in which she was placed, and also a quantity of alcohol, the whole then imbedded in charcoal, in a still larger coffin, for the purpose of preserving her, as it was her husband's intention to have her sent to England; but shortly afterward he took sick himself and died, and also his child. The body then remained in the cemetery undisturbed, until a short time ago, instructions were received from her relations in England, to have the body exhumed and interred in the cathedral. On opening the coffin the body was found to be petrified and perfectly marble-like, but, strange to say, as quick as the air got to the body it changed to a light copper color."

An egg was opened in Grass Valley recently, which contained within its white portion a smaller egg, fully formed and with a shell on it.

**THE INDUSTRIAL SCHOOL.**—The Fourth Annual Report of the Board of Managers of this institution is before us. It contains many features of interest to the citizens of this city as well as the State at large. There are at the present time 52 inmates, being an increase of 22 over last year, "thus proving that the class of boys and girls for whose reformation the Industrial School was created, is numerous in our city." The causes of commitment are: Leading an idle and dissolute life, 40; petit larceny, 9; vagrancy, 2; grand larceny, 1. That it is working well, it need only be mentioned that with the increase of 22 the expenses have been but little above the past year; and while the number of escapes was last year 16, this year they only amounted to 3. It seems, also, that they have found the correct stimulant to encourage good behavior, that of rewarding the obedient with confidence. And we believe it is the experience of all teachers of the young that without confidence in the pupils, success is impossible.

While we have schools for the man of letters, the merchant, the navigator, and in some instances the agriculturist, none for the encouragement of scientific mining is on our coast, though of all countries here, where our main wealth is minerals, scientific mining instruction is most needed. Why should we not have this branch taught to the growing up youth? This, with the subject of industrial schools, should engage the attention of the instructors and supporters of the rising generation.

**RECLAMATION OF SWAMP LAND.**—The *Stockton Independent* says of Mr. Carpenter, a farmer in the swamp land of San Joaquin county:

He has been experimenting with levees and ditches for the last five years to protect his land from the annual overflow of the Calaveras, and finds it as necessary to have inside ditches or drains to carry off the rain water as to have levees or embankments to keep off the overflow. He runs his embankments in straight and parallel lines—one through the centre and one on each side of his land subject to an overflow, and makes them three feet in height by twenty feet in base. These embankments are used as roads in wet weather when the surrounding ground is boggy and impassable for horses.

Mr. C. says the water will find its way, to some extent, through the oldest and best levees, and that new levees are of but little use the first year. It requires immense labor and patient industry to reclaim the low, flat land on the lower end of the Calaveras; but Mr. Carpenter is not only setting a good example to the owners of such fields by the exercise of good judgment in bringing it under tillage, but is laying the foundation of an independent fortune.

A certificate of incorporation for the Banner G. & S. Mining Company was filed last week in the office of the County Clerk. Its object is to conduct the business of mining on a certain vein or ledge known by the name of the Last Chance Hill Vein, and located in the Esmeralda mining district. Its Trustees are—John W. Tucker, Gardner W. Case, A. F. Mitchell, George W. Funk and Henry Howard Welch. The term of existence is placed at 50 years, and its capital stock at \$800,000, divided into 2,000 shares.

### Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

As we have also now associated with us in our business Wm. H. R. Wood, Esq., whose well known legal acquirements, and practical care, punctuality and correctness, eminently qualify him for business of this kind. Dr. Wood also acts as general agent for all persons having business to be attended to either in this city or Washington city.

**HUNTER'S GRAIN SEPARATOR.**—We saw this new invention in operation last week, and it performs the work in a thorough manner. It is calculated for separating any kind of grain, but is more especially adapted for wheat. The wheat to be cleaned on this occasion contained a large quantity of oats and chaff; and after passing it through this machine it was quite clean. The grain to be cleaned and separated is poured into a long trough at the top, and from thence passes down two inclined planes which are moved with a uniform motion from side to side by a crank. The upper plane has four compartments, one over the other, which are pierced with holes. The oats and barley in the wheat pass off into a box at the further end; and the wheat and chaff comes down in front—the good clean wheat falling into one box, and the small stunted grains and chaff into another. Bags are hooked under these boxes, and as soon as filled are taken away and supplied by others. There is no waste in the operation. 600 sacks of wheat can be cleaned in a day by the large machine which is now in operation. Mr. Hunter is now building separators of a convenient size for farmers' use which will cost \$100—and we could see that it will be a very useful machine for them. Every farmer is anxious to bring his wheat to market as clean as possible, for the price he will get for it will be in proportion thereto. By this machine he is enabled to bring not only a clean article, but a good article, for it will have none but the good plump grains. The imperfect and broken grains and chaff make excellent chicken feed; or ground, it is considered equal to barley for horses. It is a California invention, devised by a practical farmer, and was patented in 1861.

### Gird's Budding Knife.

This invention is one of the many California has thus far produced, and is certainly deserving of her, it being the most useful and practicable for the purposes designed. The horticulturist who once adopts this knife will find its value so evident that ever after its services will be indispensable, since with it much labor and expense are saved. In speaking of it the *Scientific American* says:

"The above engraving illustrates a knife which is calculated to facilitate materially the process of budding. Upon the ends of the blades are formed crescent-shaped crosses of steel with fine edges for cutting the T-shaped slit in the bark of the tree to be budded. These blades with their crosses are made of different sizes, so that some one of the three may be adapted to the size of the tree to be operated upon."

"It is the practice of some horticulturists to remove the bit of wood which is cut from the scion with the bud, and to insert the bark only with the bud. To save this operation, the round blade is formed with several curves in its edge, so that it will cut the bark alone from the scion without taking off the bit of wood, the curves being of different radii to adapt them to scions of different sizes."

"With this knife several operations are reduced to one, and the process of budding is greatly facilitated. The crescent-shaped cross is pressed through the bark making the transverse cut, and then by simply carrying the knife down, the vertical slit is made, and the bark is raised at the same time ready to receive the bud. This knife was used in California during the last season, for budding several thousand trees, and it gave great satisfaction to the operators."

Those desiring to purchase will please address Julius Silversmith, San Francisco, respecting terms, &c.

**STOCK AND EXCHANGE BOARD.**—A regular Stock Brokers' Board, upon the same general plan as those of the older cities of the Eastern States, has been formed in this city. The necessity for such an organization in San Francisco at present, does not seem to be very urgent, but the rapid increase of stock companies warrants the belief that the stock brokers may have enough to do hereafter. The officers of the Board are: J. B. E. Cavalier, President; E. W. Teackle, Vice President; Franklin Lawton, Secretary; Henry Schmidell, Treasurer.—*Call*.

The *Deseret News* states that a cotton mill has been built at Parowan in that Territory, and that some of the machinery has been put up and is now running. A considerable quantity of cotton is now raised in southern Utah, and it is for its manufacture into cloth that this factory has been erected.

## Mining and Scientific Press.

J. SILVERSMITH, Editor.

TUESDAY.....OCTOBER 7, 1862.

The MINING AND SCIENTIFIC PRESS is published at the State Capitol building, Rooms 23 and 24, corner of Battery and Washington streets San Francisco, Cal., by

J. SILVERSMITH, Editor.

At FIFTY CENTS per month, or \$4 per annum, in advance.  
Advertisements, Fifty Cents per line.

## Engravings, Electrotypes, etc.

WE execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## OUR MINES.

We have tried in vain to find out how our mines are paying. 'Tis no use, our miners won't tell.—*San Juan Press.*

This conduct has ever characterized California, and may continue for an indefinite period hereafter, until the Government shall enact laws for collecting revenue from mining sources. Though we are far from advocating such a measure, yet we cannot with due deference to our almost impoverished Government, withhold the fact that many are now taking out their thousands from placer mines, &c., without paying an adequate proportion of the taxes, as compared with the trader and mechanic. We should not be surprised to learn when Congress convenes in 1863, that an effort will be made to pass laws for the sale of mineral lands, together with enactments for the better, more permanent and successful prosecution of mining. The attempt was made at the last session, but was defeated. Many will howl and complain; and yet we are of opinion that the advantages resulting from such a measure will prove of incalculable benefit to the Pacific States and the Federal Government. At present, some 80,000 miners in this State pay but a small tax, comparatively speaking. Should the Government undertake to dispose of the mineral as it does the tule and agricultural lands, an immense amount of revenue would be realized at once. The mining population would then remain permanently on their claims; gold fevers and excitements of that nature, would be far from swaying them from their homes; they would contrive to work their claims in a systematic way, with a view to permanency and economy. The mining claims in Nevada county are rich, and the owners thereof have no plausible reason for withholding their yields. If we desired, we could easily obtain the aggregate amounts realized by means which they could not evade; and as it is, we get the semi-annual amounts through the mint. But from which particular locality the several deposits come from, may for a time remain sealed to the public.

On the other hand, if the Government should conclude to hold the mineral lands, and instead thereof tax miners pro rata of what they extract from their respective claims, the results of the amounts extracted would become generally known at once, and the true richness of our golden land proclaimed. Commissioners and overseers appointed by Government would see to it that the daily or weekly results are marked down. Besides such enactments, stringent laws governing mining will accompany, having especial reference to the construction of tunnels, shafts, levels, &c., and accidents resulting from carelessness in these matters shall be severely punished, by fine or imprison-

ment. If we are not in favor of taxing miners, we are certainly in favor and would strongly advocate a systematic mode for prosecuting mining in this State. Other evils would in turn be reached by means of such enactments.

## OUR LATE REVERSES.

A humiliating spectacle for a proud and powerful people are the late reverses the Union armies have met with in the South. They are enough to make a loyal man's cheek color with shame, and droop his head in sorrow. An army of rebels, in the main not much more than half our numbers, and not near as well appointed, have not only driven us from the territory they claim as theirs, but have advanced into the loyal States, and threaten our very Capital! Truly, it is "carrying the war into Africa." It is useless to try to hide or overlook the fact—we have met the enemy and—they have defeated us; and, to lighten our mortification, we have not even the poor consolation of an excuse to offer in palliation—we must quaff the bitter cup without anything to mollify its severity. We have had a year and a half to recruit and discipline our forces—time which, we were told, was being improved; we exultingly advanced to the very trenches of the rebels, and only waited for favorable weather to attack and capture them. But instead of attacking we were attacked, and instead of capturing we came nigh being captured, and were compelled to make an inglorious retreat. That those at the helm of state are responsible for these disasters, no one conversant with the history of the past year will deny. The loyal States, with unparalleled promptness and enthusiasm, responded to all the calls Government made upon them: they furnished money by millions and provided and equipped an army such as, in point of numbers and personnel, has not been equalled by any one nation since the great Napoleon's invasion of Russia. And after all this outlay of life and treasure, to be beaten by an army confessedly inferior in point of numbers, who are laboring under the conviction that they are fighting against the regularly constituted authorities—shows that there is culpable imbecility or gross mismanagement in the Administration.

Our soldiers are as good stuff and as brave men as tread the earth, composed as they are of the acknowledged bravest peoples in the world—Americans, Irish, Germans, &c.—and carry with them the moral force of knowing that they are in the cause of right and order. But they have been given for officers men whose peculiar acquirements and experience in no manner fitted them for military leaders; men who know not enough of military science to manoeuvre a regiment on parade, let alone lead an army into battle. And this was done not for lack of tried and able officers, (for many such we have,) but through execrable favoritism. 'Tis true there are many honorable exceptions; but these latter were so shackled and their powers so limited, that they were unable to accomplish anything.

Our late misfortunes, however, have, we hope, awakened those at the head of the nation to a sense of their folly; and, if they wish the loyal masses to still retain a hope of seeing the authority of the Government established over the seceded States, they will bury personal jealousies, and reconstitute the army in such a manner as will be likely to win the gratitude of our own and the respect of foreign nations. In a word, put soldiers at its head, and send home the politicians to attend their caucuses. And for the honor of the country, let us have done with this wrangling and indecision: do not be perpetually changing, removing and appointing—tearing down to-day what was built yesterday; for nations, like armies, are almost certain to become disaffected when the rulers show their incapacity to govern.

If these be done, instead of rebel hordes desecrating the loyal soil of Pennsylvania, in less than twelve months that sacred emblem of liberty, the beacon of the oppressed, the hope of the suffering patriot—the glorious Stars and Stripes, will not only float over Richmond, but over every fort and citadel in the South.

SAN FRANCISCO, Sept. 13.

MILITARY ELECTION.—On Saturday evening last, the Franklin Light Infantry elected D. M. Greene First Lieutenant, *vice* Stuart, resigned; and John T. Barry senior Second Lieutenant, *vice* Greene, promoted.

## OUR INDIAN TROUBLES.

From various parts of the mining regions of the State accounts are daily coming to us of the hostile attitude of the natives. Such a condition of things exercises a very injurious influence on the productive industry of the country. Surely the difficulties, toils and hardships with which our mining population have to contend are sufficiently onerous, without adding thereto these continual apprehensions of the tomahawk and scalping-knife of the savage.

What are our numerous soldiery about, that some of them are not made to operate in this direction? We have now lying idle, in different parts of the State, some five or six thousand military characters, who, so far as we can learn, have never yet—though they have been mustered into the service over a year and living upon Uncle Sam's "pap" all the time—been called upon to perform the slightest active duty. A little exercise, we have no doubt, would not only be beneficial but very grateful to them; and certainly such exertion could not be directed to a more useful or humane purpose than that of terminating these Indian difficulties.

This has to be done either by the General Government or by the State and private enterprise. If accomplished by the former, they thereby save all the expense which will be attendant on fitting out an expedition by the State. This State has already large claims against the National Government for expenditures incurred in suppressing Indian hostilities; and it is certainly not desirable that these claims should be increased. It is well known that the General Government is responsible for all the expenses necessarily incurred for purposes of this kind, as it has on various occasions heretofore recognized. Why, then, when it has the men already under pay, and lying in idleness, could not the Government employ them in this way, temporarily, and thus save the expense of having these hostilities suppressed by the State. They could thus be more promptly as well as more effectually put down; whilst, at the same time, such a course would at once withdraw from those unprincipled whites, who are said purposely to excite these wars, all temptation and inducement to prosecute their unholy schemes; for if these hostilities are thus designedly excited by bad men of our own race, it is only with an eye to some future charges for military services, that they may "feather their own nest" at the expense of the public treasury.

The Government could scarcely offer a more direct reward for getting up these Indian wars than by leaving them to be dealt with by the very men who produce them, and then paying the expenses out of the general treasury. If, however, instead of allowing them to be put down by private or State enterprise, the Government would, whenever they occur, send their own troops to suppress them, and call the guilty perpetrators of the first wrong to stern account, it would be rendered impracticable to make them a matter of speculation by private adventurers. The United States troops now in California are doing nothing, and where is the excuse for thus allowing our most productive citizens to be driven from their homes and avocations by these Indian outbreaks? why not reduce them at once to subjection and place them on the reservations for civilization?

The present is too critical a juncture in our financial affairs, to permit the gold-bearing regions of California to be rendered thus useless and unproductive. It is almost alone upon the basis of the gold and silver mines of this coast that our present exorbitantly expanded paper currency must find a support—and every contraction of the field or diminution of the amount of their production, most sensibly affects the wide circumference of the country. It is gold and silver alone that supplies the solid circulating medium of a country, and hence the Government is loudly invoked to see to it that the free and unembarrassed working of the mines of these precious metals is not interfered with in the slightest degree. We, therefore, call upon the military authorities of this coast to put down at once and forever these eternal and ever periodically returning Indian hostilities, and allow our hardy and industrious miners to pursue their vocations, at present so indispensable to the vitality of trade the prosperity of commerce and the general well being of the nation. They may thus render as great, or greater, service to the country than if they should meet and conquer the bannered foe upon the plains of civil war.

Will not the military commandant on this coast act on this suggestion, and thus save the national treasury at least two or three hundred thousand dollars? Don't say you have not got the power; take the responsibility.

## A CHAPTER ON INVENTORS AND DISCOVERERS.

The whole community is benefitted by the promotion of the useful arts, and, therefore, it is for the public good to hold out the promise of rewards to the inventors of new and useful arts and manufactures, who may first put the public in possession of them. It is true that by such a grant as a patent makes—a monopoly for a time—every other person is restrained during the continuance of the monopoly from using the invention, even if he makes a similar discovery himself. But at the time the grant is made, it is by no means certain that the invention will be given to the public, or even made by any other person; and by the temporary suspension of their right, the people acquire the certainty of being able to use the invention at the expiration of the monopoly. Utility to the public is, in fact, the consideration of every grant for the sole use of an invention, and letters-patent containing such grants always state the public good to be the motive in making the grant.

Hence, therefore, the total absence of utility to the public, in any invention, will at all times vitiate a grant of the sole use of it. But it will not be void on that ground if it were useful to the public, although such utility may be very small.

But an invention may be of some use to the public, and yet be so trifling or frivolous, that the inconvenience arising from a grant of the sole use of it would not be adequately compensated by the benefit which the public would receive from it. The law, therefore, has deemed it right that mere discovery of any new manufacture shall not vest the sole right to use it in the inventor; but that to be entitled to such privilege he must obtain a grant from the Government, who have the right of judging, not only whether the invention is likely to be of sufficient utility to warrant its being made a matter of public concern, but also the duration of the privilege it merits.

There is reason to believe, though it is not positively known, that the practice of making grants of the sole use of inventions originated in England, and that it has thence been copied more or less closely by other nations. It is a power derived from the common law of England; and this law has been modified by statute in modern times both in England and other countries. (Hindmarch on Patents, 3.)

No person can be the grantee of a privilege in an invention except the *true* and *first* inventor. To be capable of supporting such a grant the patentee must be the person who has not only actually invented or imported the invention, but who has been the first to give it to the public.

In England it is held that the first importer of an invention from abroad may have a patent. (Edgeberry vs. Stephen, 2 Salk., 447; Dav. P. C. 36.) This, however, is not the case in the United States. Here the inventor alone can get a patent. He is deemed the first inventor who first gives, or contracts by patent to give, a knowledge of it to the public. And the fact of first introducing an invention is *prima facie* proof of first invention. Although a patentee's claim to be the first inventor will not be defeated by the prior discovery of the same thing by one who kept it secret, yet it is otherwise if the invention was known to be used by the public at any time before the date of the patent.

If the inventor himself publishes a knowledge of it, the law deems that he thereby dedicates it to the public; and when once the publication has

been made the act is irrevocable, and a patent cannot be granted, or if granted will be useless. And if the public becomes possessed of a knowledge of it by any means whatever, no patent can be granted.

## BAD MANAGEMENT IN MINING.

Our recent tour towards the Sierra Nevada has afforded us an opportunity of seeing considerable mining enterprises, which from their simplicity and primitive modes, hardly entitles them to be called enterprises. The placer mines throughout California, it must be assumed, have scarcely begun to be worked, although something like \$600,000,000 have been extracted since the year 1848, and countless millions are yet concealed in the hill sides and mountains on both sides of the Sierras. Thus far only a scraping in the ravines and gulches has been the extent of mining, and when these had been worked once or twice (some of which would even now pay from \$3 to \$10 per day to the hand), are declared "worked out"—despite after the periodical rainy seasons, when the same will, as before, pay excellent wages, which proves that the hillsides are yet pregnant with fine particles of gold. In our tour from Folsom to Placerville, we noticed many places abandoned on account of the want of water, and little, if any, work was being done to prepare for the coming rainy season. We noticed but one ditch company, but their rates are held so high as to preclude many from mining, unless their claims are extraordinarily rich.

The old mode of sluices and toms are still in vogue in this district. The current in the sluices is generally so great as to carry with it the fine atoms or scales in its course; only the heavier particles or grains of metal precipitate. The miners in and about El Dorado county seem not to have taken advantage of "Dunning's under-current sluice," as described in the MINERS' COMPANION AND GUIDE. If recourse were had to this invention, together with increasing the width of the sluices and drifting the hillsides in every direction, from 15 to 20 per cent. more gold would be saved.

Though quartz veins abound in the vicinity of Placerville, yet little enterprise is being evinced to work them for their metallic wealth. One establishment only seems to be profitably engaged in reducing a moderately good paying lead, which renders on an average \$15 per ton in gold. It is owned by parties formerly of Nevada county, and is known as the Pacific Quartz Mill. Some fifteen members form this company, many of whom are practical miners, having worked in the Lake Superior copper mines. The reducing works are of an improved plan, being a 20-stamp Bryan's mill, 30-horse power engine, and utensils for working sulphurets.

A large field is still open in Placer and El Dorado counties for mining, and we see no reason why the complaining white man in these sections should allow the miserable Mongolian to quietly go to work and extract the precious metals from under his nose. The coolie, with his simple means, takes out enough to pay an enormous tax, besides enriching himself in a few years, even after the claims have been worked several times over. It is equally astonishing to see that the municipalities, town corporations, or enterprising citizens in mountain towns, do not take advantage of making the coolies subservient to their interests; namely: these coolies are under the immediate surveillance and superintendence of companies in San Francisco, who have established agencies all over California, espe-

cially where mining is carried on, and the results of their labor and industry, with but few exceptions, go towards enriching those opulent mandarines. Now, every corporation or private company throughout California, might take up and prospect mining ground by hiring from mandarin companies their nominal slaves or coolies, who may be had in numbers at from \$15 to \$20 per month *per capita*. Sooner or later the laws regulating the Chinese tax must and will be so modified as to preclude them from our mines, except when employed by white persons or companies. Aside from mining pursuits, their services might be profitably employed in the construction of ditches, canals and roads—these latter, by the way, are wofully neglected. The present rates of wages are too high, ranging from \$2 50 to \$3 per day, and scarce even at this.

Altogether, the districts which we visited show lack of enterprise and judgment. The roads, with few exceptions, are, for this season of the year, in sad plight, and if we had authority over the road overseers, we should condemn them to be hung for neglect of duty.

## URGENT NECESSITY.

The impending session of the Legislature will have to pass a law and provide funds for the establishment of a State school, in which the several sciences belonging to geology, mineralogy, chemistry, metallurgy and mining engineering will be taught by able professors. The expenses necessary for such purpose can easily be defrayed by imposing a small tax upon the 80,000 miners now employed in our mines, and these will willingly further the ends for such an institution. The want of such a school has long been felt, for many reasons, and we have hundreds of young men who would willingly pay for their tuition in these branches. Aside from the benefits which the poorer class of students would receive, and who are either physically or mentally incapable for other occupations, when graduated students, have left the institute, they can be useful to themselves and the community at large, and their services in developing our mineral riches will more than compensate for the outlays of the State. The majority of our miners are devoid of the necessary knowledge in mining for the precious metals, and the greater part of them only know how to traffic in "paper stock." The State cabinet of minerals should at once be placed at the disposition of the school, and analyses of all the specimens should be made. The several scientific associations will, we are satisfied, render every aid to such a school. We are little known abroad for our mineral wealth, because we do nothing for the permanent and systematic prosecution of mining operations. Gentlemen Legislators, your predecessors have been noted for squandering the hard-earned monies of your constituents; do you abrogate this pernicious practice, and give us a first class mining school, with a salaried professor for each branch, thereby you will merit the blessings and thanks of a grateful people, who are now groping in darkness while in search for the needy.

ON DIT.—It is rumored about town that a new scientific and mining journal is to appear. If the parties were only aware of the up-hill work attendant on the building up of such a journal, unless they have about \$20,000 to invest without the shadow of return, they would keep their fingers out of the pan. The MINING AND SCIENTIFIC PRESS is too well established and sufficiently ample in furnishing the mining community with instructive reading matter. We have not made any money yet, and we cannot see how a new comer can supersede us in this particular.

# WHY WILL YOU SUFFER, YOU THAT ARE AFFLICTED?

DISEASES CURED WITHOUT THE USE OF MEDICINES!

THE DIRECTORS OF

The Electropathic Institute,  
645 Washington street,

Offer those who would avail themselves of the researches into the arena of medical science, an opportunity to benefit thereby. Thus, by the application of an art totally differing from the usual routine systems of the day, Electropathy is now the favorite study and practice of the most learned medical savans throughout continental Europe. Every proof exists that the magnetic electro current reaches directly the nervous centres, the brain, spinal cord and nerves of sensibility and motion, the controlling agents of organic life. The application of this powerful and mysterious agent is thus made, under the guiding hand of experience, subservient to the alleviation of disease, restoring through the medium of the nervous system the normal functions of the various viscera. By this agent the pernicious consequences of converting that most delicate of organic tissues, the stomach, into a chemical laboratory or drug shop, is totally avoided. Thousands can testify as to its efficacy, and many have experienced its beneficial effects. When correctly administered, Electropathy is applicable to all diseases to which flesh is heir, but more particularly to complaints of the nervous system, Rheumatism, diseases of the Lungs and Spine.

The Directors have secured the services of Dr. JOSSELYN, whose improved Electropathic Instrument stands in advance of all others as a curative agent. This scientific Physician will be in attendance from 9 A. M. until 8 P. M., to consult with the afflicted, and in all cases where he can conscientiously do so he will warrant a perfect and permanent cure. Those particularly who have exhausted the catalogue of medicines, will do well to call and consult him, and examine the certificates of cure which he has recorded in the Institute.

## Rheumatism! Rheumatism!

The above troublesome disease can be cured by electricity only; and Dr. Joselyn of the Electropathic Institute will warrant a cure, perfect and permanent, in a very short time, or ask no pay for his services.

## Consumption,

That awful and hitherto considered incurable disease, can be cured by the Electro-Magnetic treatment. The Electropathic treatment at once stops the ravages of this fell destroyer, and the cure commences from the first treatment. A cure in all cases will be insured.

## Diseases of the Eye.

The Electric treatment is the only mode by which a rapid and permanent cure can be effected in Sore Eyes. It acts upon the nerves and mucous membrane connected with the eye, and the removal of morbid matter and all inflammation, produces a healthy action, at once restoring that valuable organ to its natural state. A cure warranted, or no pay asked.

## Electro-Magnetic Baths.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impositions in the bathing line. The pure magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble; and cases have been known where the patient has been injured so badly as to require months to remove the injury. The only place where these baths can be obtained in all their purity is at the Institute, where the resident physician will be always ready to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic System, at the Institute, during the last year:

NAME OF DISEASE.	NUMBER.
Rheumatism, - - - - -	821
Neuralgia, - - - - -	363
Dyspepsia, - - - - -	297
General and sexual debility, - - - - -	240
Asthma, - - - - -	220
Bronchial affections, - - - - -	187
Fever and Ague, - - - - -	183
Female irregularities, - - - - -	161
Mercurial affections, - - - - -	130
Diseases of the eye, - - - - -	485
Paralysis, - - - - -	78
Serofula (long standing), - - - - -	330
Catarrh of the lungs, - - - - -	27
Catarrh of the head, - - - - -	321
Liver complaints, - - - - -	420
Deafness, - - - - -	18
Panama fever, - - - - -	10
Consumption, - - - - -	17
Private diseases, - - - - -	1123

## Females

In need of a physician should bear in mind that here is a remedy that will positively cure all diseases incident to the female economy, without the inconvenience of taking bitter medicines. Here all can be relieved of their troubles and irregularities. Institute open at all hours. Examinations gratis. au14-3m

## GREAT REDUCTION IN PRICES.

STANFORD BROTHERS,  
121, 123 and 125 California Street,  
KEEP THE LARGEST STOCK OF ALL KINDS OF  
Lamp Stock,  
And will Sell Cheaper than any House in this State.

LAMPS,  
CHIMNEYS,  
WICKS,  
CAMPHENE,  
BURNING FLUID,  
ALCOHOL,  
TURPENTINE,  
COAL OIL,  
KEROSENE OIL,  
COMET ILLUMINATING OIL.  
SPERM OIL,  
LARD OIL,  
MACHINERY OIL,  
RAPE SEED OIL,  
CHINA NUT OIL,  
LINSEED OIL, Raw and Boiled,  
POLAR OIL,  
SHARK'S OIL,  
NEATSFOOT OIL,  
TANNER'S OIL,  
&c., &c., &c.

Our customers in particular, and the country trade generally, are requested to ascertain our prices before purchasing from traveling agents, as we will sell at less rates than they can afford to.

PHILADELPHIA BREWERY,  
Second street, corner of Folsom, SAN FRANCISCO, CAL.  
Hoelscher, & Wieland Proprietors.

Thankful for past patronage to a discriminating public, we beg leave to express at the same moment, our many friends and patrons that the above well known Brewery has been permanently located in our new premises, on Second street—the former residence of Capt. Folsom—where we shall endeavor to continue in furnishing our numerous patrons with the best article of "Beer." We shall strive to perpetuate the good reputation for promptitude and the faithful execution of orders as heretofore, and thereby increase our custom. Nov9.

## SQUARZA'S PUNCH.

### HOME MANUFACTORY.

WHOLESALE AND RETAIL,  
No. 44 Leidesdorff street, near Sacramento st.  
Branch at 406 Montgomery street. my30

## FULTON FOUNDRY AND IRON WORKS.

HINCKLEY & CO.,  
MANUFACTURERS OF STEAM ENGINES,  
Quartz, Flour and Saw Mills; Cast Iron Fronts for Buildings,  
Mining Pumps, and all kinds of Machinery,  
Amalgamators, Etc., Etc.  
47 & 49 First Street,  
BET. MARKET AND MISSION, SAN FRANCISCO

ALL kinds of Iron and Brass Castings furnished at short notice. Every style of finishing to iron when cast. Repairing to Machinery neatly done. Pattern Making in its various forms.  
D. B. HINCKLEY WM. E. WORTH WM. A. FIELD

## REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL WORKS  
is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.  
Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.  
COPPER ORES—Highest market rates advanced in cash, for shipments.  
S. C. BRADSHAW, Agent,  
my30 318 California street, near Sansome, up stairs.

A. S. ROSENBAUM & CO.—Importers of pure Havana Cigars, Tobacco, etc., corner Clay and Battery, 25 and 27 Cedar street, New York.

## J. D. DEMAREST, M. D.,

Graduate of N. Y. University,  
1848.

Professor of the theory and practice of Medicine, as demonstrated in the treatment and Cure of Special Diseases in this State, during the last thirteen years.

IN ALL THE BRANCHES OF BOTH THE ARTS AND SCIENCES, AS WELL as the Medical Profession, speciality has ever been recognized by men of judicious reflection, as both progressive and instructive, for it is a perfectly well demonstrated fact that any individual, however astute he may be, attains to an infinite greater degree of perfection by a thorough and persevering continuity to one branch of art, science, medicine, or mechanics, than if he attempted to accomplish half a dozen—as in the latter case he would be likely, nine times out of ten, to obtain at most but a very superficial knowledge of either. In the practice of medicine or surgery, it unravels, simplifies and makes clear to the arduous student the mysterious complications (complicated on account of the numerous causes which produce them) which diseases of any kind take upon the human system; operating as they do frequently both on the mental and physical organs. It seeks to recuperate and restore the functions to their natural and proper status, as well as to neutralize all antagonistic influences to which the system is continually subject. Certain it is, that while the busy affairs of life seem to exhaust all our time and attention, the incipency and progress of disease, sometimes of dangerous and fatal character, approach us almost unnoticed. Slow in its progress, but insidious in its course, a disease, or even the simplest disturbance of a single function, frequently becomes an affair of imminent danger when least expected. To this the attention of the physician of specialities is always earliest given. With proper perceptive powers, added to ample experience, he is necessarily able to arrive with unerring certainty to a correct conclusion as to the character of the ailment and the proper appliances for its cure. This I have never found to fail. A remedy properly administered, and at the proper time, is sure to effect the object of its mission, provided it be directed by the hands of a skillful physician, who knows his business. I need not reiterate the old adage, that "Health is the endorsement of Divinity," sent to us for our own benefit, and that we should not for a moment disregard the secret admonitions that tell us to beware, lest we fall imperceptibly into a labyrinth from which it will be much more difficult to escape than if we had given proper attention to ourselves before venturing so far. Consult your physician before it is too late; confide in him, and you will save yourself an infinity of suffering.

Below will be found a few of the testimonials received by Dr. Demarest previously to his leaving home for this country in 1849:

NEW YORK, Jan. 14, 1848.

This may certify that Dr. J. D. Demarest, by the assiduity and attention which he has given to his studies, and his uniformly good conduct, justifies me in believing that those among whom he may be placed, can repose confidence in his professional attentions.

VALENTINE MOTT, Prof. Surgery N. Y. University.

I concur in the favorable impressions of my colleague.

SAMUEL HENRY DICKSON, Prof. Theory and Practice of Medicine, N. Y. University.

MARTIN PAINE, Prof. Materia Medica, N. Y. University.

This may certify that Dr. J. D. Demarest, has been in my office for some time past, and has attended a number of my patients for me, with perfect satisfaction both to them and myself. I, therefore, take pleasure in recommending him to any person or persons requiring medical services. I can also speak highly of his moral as well as professional character.

NEW YORK, December 5, 1848.

J. WELDON FELL, M.D.

I take great pleasure in recommending to the notice of all "whom it may concern," Dr. Demarest, a gentleman of first rate attainments in his profession; and a man in every way qualified to be trusted with the health and lives of any body of men he may choose to join. I have had his acquaintance a long time, and he has attended my patients for me with entire satisfaction.

NEW YORK, January 29, 1848.

N. CLARK LEAVINGS, M. D.

Being desirous, above all things, of rendering myself proficient in my profession, I assure my patients and the public that I attend personally to all cases that come before me, either by correspondence or by personal visits. The strictest confidence and the utmost regard for professional honor and secrecy always observed.

Patients residing in any part of this State can have the remedies applicable to their several disorders forwarded to them, without risk of exposure. Be minute in the details of your case, as regards the duration of the complaint, symptoms, age, general habits of living and occupation.

All female complaints, of whatever name or nature, treated successfully. Those ladies whose complaints naturally excite a hesitation in applying for advice, may rest assured that in most instances a personal interview is unnecessary, as remedies and general instructions can be administered through correspondence. Address, DR. J. D. DEMAREST, San Francisco, Cal.

Office—S. E. corner of Washington and Sansome streets, over Ulman's Book Store, nearly opposite the Post Office. j627

AGENCY FOR PATENTS.—The undersigned having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Patents and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETHERED & TIFFANY,

Office, 410 Montgomery street.

CHARLES R. BOND, (Late City and County Assessor.)

REAL ESTATE AGENT,

410 Montgomery street, San Francisco.

REAL ESTATE PURCHASED AND SOLD. LOANS NEGOTIATED

FREDERICK KESMODEL,

Cutler and Surgical Instrument Maker

317 KEARNY STREET.

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourself.

FREDERICK KESMODEL, Inventor and Patentee.

SAN FRANCISCO, CAL.

### PATENT LAW AMENDMENT OF 1861.

#### How to Obtain Patents Under the New Law.

The Patent Law Amendment Act, passed March 4th, 1861, and now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen and ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

#### PRELIMINARY EXAMINATIONS.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attend the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his, and used for the same purpose has ever been patented or not in this country.

Parties desiring the Preliminary Examination are requested to remit the fee (\$10), and furnish us with a sketch and description of the invention.

#### CAVEATS.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required

to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for this service varies from fifteen to twenty dollars. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftentimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

#### EXPENSE OF APPLYING FOR A PATENT, REJECTIONS, ETC.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is generally forty dollars; but the charge is higher if unusual labor is involved. If the patent is granted no further agency expenses ensue. If the application is rejected we cause a thorough investigation to be made into the reasons presented by the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

GENERAL REMARKS.—For the information of applicants, we would state that some agents are in the habit of charging for the preparation of the case, and having no further facilities, decline all investigation or prosecution when rejected. Others, also, having no facilities of their own, advise their clients to go to the expense of procuring official copies of the drawings and specifications of all the references. Again others are in the habit of charging a high price at the outset, in which they include the cost of prosecuting the case, if by them deemed necessary. Under this system, if the patent issues, or is justly rejected, no further prosecution is needed; but the inventor has paid full price for a service not wanted and never rendered.

Our object in making the above statement is, not to reflect upon the manner in which other agents conduct their affairs, but simply to have our own method of doing business clearly understood.

The system adopted by us works well, gives general satisfaction, and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorneys, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in hundreds of such cases. Our terms for such cases are very moderate.

#### MODELS, REMITTANCES, ETC.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

Where the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely, J. Silversmith, late State Capitol, Rooms 23 and 24, San Francisco. Prepay the expense, and send express receipt to us by mail.

Simultaneously with the model, the inventor should also send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco payable to our order. Always send a letter with the model, and also with the remittance, stating the name and address of the sender. We sometimes receive envelopes containing money, but without any name or explanation; models are also frequently sent us from equally unknown sources.

A full description should also be sent with the model, em-

bodging all the ideas of the inventor respecting the improvement.

On the reception of model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature, and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless the invention is one of great complication; the business can as well be done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself, must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

#### RETURN OF MODELS.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies also to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

#### DESIGNS, TRADE-MARKS, LABELS, ETC.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving, or stamping upon silks, calicoes, carpets, oil cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc. The terms for which these patents are granted varies according to the fee paid by the applicant, as follows:

Patent for 3½ years.....	\$10
"      7      "      .....	15
"      14     "      .....	30

No models are required. But duplicate drawings must be furnished, together with the usual specification, petition and affidavits, which, to render the patent of value, should be prepared with the utmost care.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

#### INFRINGEMENTS.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest or prohibition from the employment of his machinery, shop, works, factory, and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable, either collectively or individually.

Having access to all the patents, models, public records, drawings, and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Address all letters of inquiry to J. Silversmith, State Capitol rooms 23 & 24, San Francisco.

#### APPEALS.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the district of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal, and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services can be retained on moderate terms.

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

A Circular containing further information, and a synopsis of the Patent Laws of various countries, will be furnished on application to J. Silversmith, Government House, San Francisco.

Miners, Inventors, Agriculturalists, Capitalist and Mechanics, will find it to their advantage to subscribe for the MINING AND SCIENTIFIC PRESS—being the only journal of that class published upon this continent. Issued every Saturday at four dollars per annum.

Address, J. SILVERSMITH,

The following letter, which emphatically speaks for itself, was written by the Dean of the Faculty of the Philadelphia College of Medicine, to the editors of the Pacific Medical and Surgical Journal, for publication:

PHILADELPHIA, January 17, 1862.

To the Editors of the Pacific Medical Journal.—Gentlemen: My attention has been called to an article in the December number of your journal, in regard to the ad eundem degree granted by the Philadelphia College of Medicine to Dr. L. J. Czapka. When the application for the degree was made to the Faculty, it was accompanied by affidavits and testimonials to the effect that Dr. Czapka was a regular graduate M. D. of the University of Pesh, had served as a surgeon in the Hungarian army, and was a regular practitioner of medicine. On the strength of these the degree was granted. The ad eundem degree, as its name implies, is conferred on graduates only, and gives us new privileges. Had there been the slightest suspicion of irregularity, the application would have been refused. By inserting this in your journal you will do an act of justice to the College and confer a favor on Yours, very respectfully, H. RAND,  
Dean of the Faculty of the Phila. College of Medicine.

DR. L. J. CZAPKA'S Private Medical and Surgical Institute is on Sacramento street, below Montgomery, opposite the Pacific Mail Steamship Company's office, San Francisco. The Doctor offers free consultations and asks no remuneration unless he effects a cure. Office hours from 9 A. M. to 9 P. M.

**CERTIFICATE.**—I, the undersigned, Governor of Hungary, do testify hereby, that Dr. L. J. Czapka has served during the contest for Hungarian liberty, as Chief Surgeon, in the Hungarian army, with faithful perseverance. Whereof I have given to him this certificate, and recommend him to the sympathy, attention and protection of all those who are capable of appreciating patriotic self-sacrifice, and undeserved misfortune.

KOSUTH LAJOS, Governor of Hungary.  
Washington City, January 5th, 1862. jy26.

**DR. HILL'S IMPROVED AMALGAMATOR AND GLEANER.**

The accompanying illustration presents, Dr. Hill's improved gleaner, for which he obtained letters patent January 1st, 1861, since which, several of these have been practically employed in several southern counties, in this State and Nevada Territory. We have in our office a working model, which we have carefully examined and tested, and from careful observations concluded that it embodies all the natural principles and laws for doing that for which it is intended. Centrifugal and centripetal forces, form some of its leading and most interesting features: for its practicability and usefulness, we cheerfully refer to the certificates hereby appended emanating as they do from honorable and reliable sources. Our illustration is a faithful sketch; the simplicity of construction, and the manner of its operation, render it one of the most practical, useful and highly scientific inventions in existence. The inventor says:

1st, That it is automatic in its workings, consequently more economical than a vessel requiring manual aid; as with it and a mill of 12 stamps to crush and amalgamate, together with the services of an efficient feeder, twelve tons may be put through in as many hours; with a saving of 99 per cent. of the liberated gold; and the same be cleaned up in one hour from the stoppage of the mill by one man, whether for a day's, week's or month's run.

1. It is a perfect guardian against all such losses as result from overfeeding, over or under dosing a battery with mercury: all of which are well known by practical millers to be productive of much waste.

3d, It supercedes the necessity of copper plates whether inside or outside of the battery together with sluices, gunny bags, blankets, revolving barrels, and all their kindred contrivances, together with the incidental expenses attendant upon the same. It also dispenses with the toil of unhousing a battery, except in case of accident, or when gold is too coarse to pass the screens. So that the work requiring the services of three or four persons all day, is accomplished by one man in one hour, that being the extent of time required to clean it, whether, as observed before, for a day's, week's, or month's run.

4th, It can be so arranged that no one, save those having the exclusive right, can interfere with it; a desideratum not to be dispensed by mill proprietors.

The physical laws by which these results are arrived at are the following: specific gravity, centrifugal and centripetal forces, aided by water.

The specific gravity of gold is 19; mercury 13; quartz 2, about. Now it must be borne in mind that all bodies when immersed in water lose a portion of their weight equal to their bulk of water, consequently the relative weights of the above bodies will be as follows, gold 18; mercury 12; quartz 1 about, showing a great preponderance in the weights of gold and mercury, over that of quartz when in suspension.

When the crushed material from the mill arrives at the gleaner, an immediate separation of the amalgam from the accompanying waste matter takes place; the former from its superiority of weight descending to the pool of mercury, becomes incorporated with the same, and sinking to the bottom, remains as in a stationary vessel; while the waste matter or tailings, from their inferiority of weights, are held in suspension, and in this condition expelled from the gleaner by the centrifugal force.

Should any of the amalgam in its descent escape the pool, it is at once seized by the mercury-lized surface of the vessel, when, from affinity and cohesion, it so firmly fixes itself as to be proof against any power at work in the vessel to remove it.

The speed imparted to the gleaner is barely sufficient to expel the waste matter, and retain the good.

ANGELS, April 19, 1862.  
Having thoroughly tested the merits of J. M. Hill's gleaner, at the Broderick Mill, I unhesitatingly acknowledge its superiority over all other contrivances of my knowing, for the collection of amalgam; as also for its economy in working. In proof of which I would state that after running it one week, in connection with the Mill, I had the hides which were placed below it and which were repeatedly washed every day in a tank, carefully panned out by an experienced hand. The result of which did not exceed fifty cents; although milling at the time rock worth fifty dollars per ton.

SAN FRANCISCO, April 23, 1862.  
Dr. J. M. Hill, Angels Camp.—Dear Sir: I take much pleasure in testifying to the value of the gleaner as an amalgamator. I consider it superior to any other machine now in use for saving gold, no matter to what state of division the same may be reduced.

Yours,  
EDWARD A. BREED.

ANGELS, April 18, 1862.  
Having subjected Dr. J. M. Hill's gleaner to a fair trial, at my mill. I can safely say, that it is superior to anything in use, of which I have the knowledge, for the purpose intended, namely, the separation, and retention of amalgam, from crushed ores.

E. C. WINTER.

**LABOR-SAVING & ROCK-DRILLING MACHINES**

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRYMEN. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

**HAND, HORSE, AND**

**STEAM-POWER MACHINES.**

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to  
W. M. W. DUNN,  
Fremont street, bet. Market and Mission, San Francisco.

**THE EYES! THE EYES!! THE EYES!!!**

**DR. E. H. PARDEE,**

*Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.*

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**SECOND YEAR! VOLUME IV.—NEW SERIES!**

A new volume of this extensively circulated paper commenced March 3d 1861. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

*The Mining Interest!*

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

*The Inventor!*

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

*The Mechanic and Manufacturer!*

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

*To Chemists, Architects, Millwrights and Farmers!*

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

**Terms.**

To mail subscribers:—Four Dollars per annum.

**Club Rates.**

Five Copies for Six Months, \$5.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80

Names can be sent in at different times and from different Post-offices

Specimen copies will be sent gratis to any of the country.

**J. SILVERSMITH, Publisher,**

Room 24, (formerly) U. S. Court Building, Corner of Washington streets, San Francisco.

## Caveats and Patent Applications.

We are enabled, through our legal connection at Washington and European Patent Bureaus, to obtain Letters Patent for inventors and discoverers on this Coast, WITH LESS EXPENSE, and GREATER ECONOMY OF TIME, than any other firm in the United States.—Those requiring our services will please address us by stating the nature of their invention, with a sketch or drawing thereof, also a model if possible. The Government fees are as follows:

On every application for a design, for three years and six months, \$10; on every application for a design, for seven years, \$15; on application for a design, for fourteen years, \$30; on every caveat, \$10; on every application for a patent, \$15; on issuing each original patent, \$20; on filing a disclaimer, \$10; on every application for a reissue, \$30; on every additional patent granted on a reissue, \$30; on every application for an extension, \$50;

## MINING &amp; SCIENTIFIC PRESS AND PACIFIC PATENT AGENCY.

on the grant of every extension, \$50; on appeal to the commissioner from examiners in chief, \$20; on every appeal to the Judges of Circuit Court, D. C., \$25.

Address, JULIUS SILVERSMITH, Patent Solicitor, State Capitol Building, corner of Washington and Battery sts., San Francisco, Cal.

## Illustrations and Engravings.

WOOD ENGRAVING.—This office undertakes the preparation of Illustrated Catalogues and Circulars for Engineers, Agricultural Implement Makers, Hardware Dealers, Jewellers, Printers, Patentees, and other kinds of Wood Engraving; and, from considerable experience in illustrating mechanical journals, can insure accuracy of detail both in the Drawing and Engraving. This is secured by employing professed Mechanical Draftsmen in the preparation of the Wood Blocks. Drawings taken from Photographs.—Estimates furnished.

## SEWING MACHINES

AT PRICES WHICH BRING THEM WITHIN THE REACH OF ALL

THE...

## NEW ENGLAND SEWING MACHINES for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Gauge and hemmer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.

(Manufactured and for sale at the Golden State Foundry,  
San Francisco.)

Palmer, Hanscom & Co., proprietors of the above well established and favorably known works, throughout the Pacific States, desire to call the attention of mining companies, mill owners, and others requiring machinery of any description, to the fact that they are enabled to execute any and all orders of whatever nature at the shortest notice, and at GREATLY REDUCED PRICES.—Their works are the most complete in their appointments on this coast. These gentlemen guarantee entire satisfaction to all who may favor them with their patronage.

Mining machinery, such as crushing mills and improved Knox's Amalgamators, (the best for extracting the precious metals) kept constantly on hand and manufactured at the shortest notice.

Send drawings and specifications for estimates, and address,

## DR. L. J. CZAPKAY'S

## PRIVATE MEDICAL &amp; SURGICAL INSTITUTE.

Sacramento street, below Montgomery,

Opposite the Pacific Mail Steamship Company's Office,  
SAN FRANCISCO.Established in 1854 for the Permanent Cure of all Chronic  
and Private Diseases, and the suppression of Quackery.Attending and resident Physician, Dr. L. J. CZAPKAY, M. D. in the late  
Hungarian War, Chief Physician to the 20th regiment of Honvéd; Chief  
Surgeon to the Military Hospital of Pesth, Hungary; the late lecturer on  
Santo Urinary Organs and Diseases of Women and Children; and Honorary  
member of the Philadelphia College of Medicine.Particular attention paid to the treatment of diseases peculiar to Women  
and Children.Office Hours—From 9 A.M. to 9 P.M. Communications strictly confidential.  
Permanent cure guaranteed or no pay. Consultations, by letter or other-  
wise, free. Address,

L. J. CZAPKAY, M. D.

## TO THE AFFLICTED.

Dr. L. J. CZAPKAY returns his sincere thanks to his numerous patients  
for their patronage, and would take this opportunity to remind them  
that he continues to consult at his Institute for the cure of all forms of Private  
Diseases—such as Syphilis Gonorrhea, nocturnal emissions, and all  
the consequences of self abuse. In the first stages of syphilitic or gonorr-  
rheal diseases, he guarantees a cure in a few days, without inconvenience to  
the patient or hindrance to his business. When a patient, by neglect or  
improper treatment, has developed the secondary symptoms of syphilis,  
such as buboes or painful swellings on the groins, or ulcers in the throat and  
nose, which, if not checked, destroy the soft parts and cause the bones to  
rotify, separate and come away, leaving the sufferer an object hideous to  
behold, or when blotches and pimples break out on the skin, or when he  
has painful swellings upon the bones, or when his constitution is injured so  
as to predispose to consumption or other constitutional disease, the Doctor  
guarantees a cure or asks no compensation.In rheumatism, chronic or acute; in dysentery or diarrhea, he has safe  
and effectual remedies. For the treatment of the consequences of self-abuse  
—such as nocturnal emissions, nervousness, timidity, headache, pains in the  
back and limbs, with general weakness, loss of appetite, loss of memory,  
tendency to the right, redness, confusion of ideas, dislike for society, and a  
feeling of weariness of life, with the nervous system so excitable that slight  
noises shock or startle the patient, making his existence miserable. For the  
above maladies the Doctor will guarantee a cure, or ask no compensation.  
He can be consulted free of charge, and invites all to call, as it will  
cost them nothing, and may be much to their advantage. Office hours from  
9 A.M. to 9 P.M.Dr. L. J. Czapkay is daily receiving applications from every part of this  
State and from Oregon and Washington Territory, for the treatment of  
every form of disease, and there is not one who will come forward and ex-  
press dissatisfaction; on the contrary, the Doctor is in daily receipt of letters  
expressive of gratitude and thankfulness, some of which are published be-  
low by permission.Dear Sir—Having entirely recovered from my sickness, I avail myself  
of this opportunity to return my thankful acknowledgments for the relief that  
you have given me. When I think of the distressing bodily weakness under  
which I have suffered, and the nervousness, headache, fearfulness, want of  
confidence, dizziness, redness, weakness, weakness in the limbs, loss of memory,  
confusion of ideas, dislike for society, nocturnal emissions, and many other  
symptoms, which had made my life miserable, I can hardly express the grati-  
tude I feel, for my existence had become a burthen to me, and nothing af-  
forded me the least gratification, whilst now I feel perfectly well and can en-  
joy life to my entire satisfaction. Knowing that there are many afflicted as I  
have been, you have permission to make use of this letter as you may think  
proper. Believe me gratefully yours,

M. MICHELS.

To Dr. L. J. Czapkay, San Francisco.

Dr. L. J. Czapkay, San Francisco: Sir—I have used the last of your medi-  
cine, and do not think I shall need any more, as I feel very well, except that  
I have not entirely got my strength yet, but soon will with the appetite that  
I have. It is just three weeks, you may recollect, since I called at your In-  
stitute, with my constitution, as I thought, entirely broken, and never  
thought you would be able to cure me perfectly, but thought you might be  
able to do something to ease the pain in my back and head, and strengthen  
my limbs, which were so weak that they would almost give way under me,  
when I walked, and strengthen my nerves so that I would not get excited  
and tremble at every little thing. Now, that you know what I expected,  
you may judge of my satisfaction at my complete recovery from those  
symptoms, and the removal of those blotches and sores from my skin and  
the ulcers from my throat, and the entire disappearance of these emissions, which  
you said were principally the cause of my sickness.I can hardly tell you which is the greatest, my joy or my surprise, for ex-  
cept not having got my strength, I felt as well as any man can feel.Enclosed I send you Twenty Dollars over your charge, and think myself  
cheaply cured. If you think anybody will be benefited, you may put this  
letter in the newspapers. Believe me gratefully yours,

THOMAS HAYDEN.

## [CERTIFICATE.]

The undersigned desirous of acquainting those who may be unfortunate  
enough to be similarly afflicted where a permanent relief of their sufferings  
may be obtained, feels it his duty to publicly express his sincere grati-  
tude to Dr. L. J. Czapkay, for the permanent recovery of his health. Borne  
down by the distressing symptoms incident to the vicious practices of un-  
controllable passion in youth, depressed in body and mind, unable to perform  
even the most trifling duty imposed upon the daily avocations of life, I  
sought the advice of many physicians, who at first regarded my disease as of  
trifling importance, but alas! after a few weeks, and in several instances  
months, of their treatment, I found to my utterable horror, that instead  
of relief my symptoms became more alarming in their torture, and being  
told by one that the disease being principally confined to the brain, medi-  
cines would be of little consequence; I despaired of ever regaining my health,  
strength and energy; and as a last resort, and with but faint hope, I called  
upon Dr. Czapkay, who, after examining my case, prescribed some medicine  
which almost instantly relieved me of the dull pain and dizziness in my  
head. Encouraged by the result, I resolved to place myself immediately un-  
der his care, and, by strict obedience to his directions, and advice, my head  
became clear, my ideas collected, the constant pains in my back and groins,  
the weakness of my limbs, the nervous reaction of my whole body on the  
slightest excitement, the misanthropy and evil forebodings, the self-distrust  
and want of confidence in others, the incapability to study and want of re-  
solution, the frightful, exciting, and at times pleasurable dreams at night,  
followed by involuntary discharges, have all disappeared, and, in fact, in  
two months after having consulted the Doctor, I felt as if inspired by a new  
life, that life which, but a short time ago, I contemplated to end by my own  
hand.With a view to guard the unfortunate from falling into the snares of in-  
competent quacks, I deem it my duty to offer my testimony to the merit  
and skill of Dr. Czapkay, and recommend him to all who may stand in need  
of medical advice, being assured by my own experience that, once under his  
care, a radical and permanent cure will be effected.

B. F. FILLMORE, [L.S.]

State of California, city and county of San Francisco—Subscribed and  
sworn to before me, this 17th day of April, A. D. 1856.

(Signed) JOHN MIDDLETON, Notary Public.

PACIFIC FOUNDRY AND MACHINE SHOP, First Street, between Mission  
and Howard, San Francisco, California. By recent additions to be-  
fore extensive establishment, we can confidently announce to the public  
that we now haveThe Best Foundry and Machine Shop on the Pacific  
Coast.With upwards of forty-five thousand dollars worth of patterns, we are en-  
abled to do work cheaper and quicker than any other establishment on this  
side of the Rocky Mountains.We make to order, and have for sale, High and Low Pressure Engines,  
both Marine and Stationary; Straight Quartz Mills of all sizes and  
designs; Stamp shoes and dies of iron, which is imported by us expressly  
for this purpose—its peculiar hardness making shoes and dies last two or  
three months. Mining Pumps of all sizes and kinds; Flouring Mills, Gang,  
Sash, Mule, and Circular Saw Mills; Shingle Machines, cutting 25,000 per  
day, and more perfectly than any now in use. One of these shingle machines  
can be seen in operation at Metcalf's mill in this city.Knox's Amalgamators, with the latest improvements; Howland & Hans-  
com's Amalgamator; Goddard's Tub, lately improved, in fact, all kinds now  
in use.Quartz Screens, of every degree of fineness, made of the best Russia Iron.  
Or Wheels and Axles of all dimensions; Building Fronts: Horse Powers;  
Smut Mills; Boiler Fronts; Wind Mills, of Hunt's, Johnson's and Lum's Pat-  
ent; and to make a long story short, we make castings and machinery of  
every description whatever; also, all kinds of Brass Castings.

Steamboat work promptly attended to.

Thankful to the public for their many past favors, we would respectfully  
olicit a continuance of their patronage. Before purchasing, give us a call  
and see what we can do.

GOLDARD &amp; CO

## ADVANTAGES

—OF—

## BRYAN'S IMPROVED MILL.

THIS MILL will Crush, with the same weight

of Stamps, Twenty-Five per cent. more rock

than any other mill yet invented. It is also

Cheaper, more Durable and run with Less

Power. All parts of it being fitted together

before leaving the shop, it can be put up

set at work Crushing the Ore, in Ten Hour

ter arriving on the ground!

Every one exclaims after seeing the Mill in

operation, "Why has not so perfect and ye

simple a mill been invented before? It would

have Saved the Fortune of many a Miner

expended in worthless machinery, and enriched

the STATE A THOUSAND FOLD!"

## QUARTZ MILL SCREENS

Of all sizes, furnished with dispatch.

## ADOPTED AND NOW USED BY

Eastern Slope Gold and Silver Company, } Washoe  
Barbota Mill Company, }  
Ophir Mining Company, }  
Union Reduction Company, } San Francisco  
Ogden & Wilson. }

## THE FOLLOWING GOODS TO BE FOUND AT

## H. D. PEARCE'S:

Gents' Heavy Gold Cases, different patterns;  
Ladies' Heavy Gold Cases, do do;  
Gold Telescopic Pen and Pencil Case;  
Extension Screw, Heavy Silver, for Gents';  
Extension Screw, Heavy Silver, for Ladies';  
Silver Extension Cases;  
Silver Telescopic Cases;  
Screw, Silver and Ebony Desk Holders;  
Slide Silver and Ebony Desk Holders;  
Reverse Silver and Ebony Desk Holders;  
Pen Holders, Silver and Ebony;  
Pen Holders, Gold and Ebony;  
Pen Holders, Gold and Ivory;  
India Rubber Propelling Pen and Pencil Cases;  
India Rubber Propelling Pencils, short.All the above goods are made to order and warranted; will be sold  
cheap for cash. There are some thirty different patterns, leaving an oppor-  
tunity for parties to select and be suited.

A cheaper class of Pens direct from New York, at wholesale only.

Gold Pens constantly on hand. Gold Pens repaired.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

For parting silver from gold when gold is below 300-1000ths. fine.....3cts per oz.  
" from 300-1000ths. to 750-1000ths fine. 7cts "  
" " 750-1000ths to 950-1000ths " 14cts "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
301 " 500, 7cts. " " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths. cents per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

## HOSTETTER'S STOMACH BITTERS.

They renovate, purify and strengthen the system, and aid the stomach in the performance of its functions. It is a sovereign specific for imparting strength, vigor and tone to the system, and possessing the curative powers for all diseases arising from a disordered stomach.

## DYSPEPSIA,

In all its forms, yields to its control and invigorating properties, and that its return is effectually prevented and the digestive powers preserved in the fullest vigor by a subsequent occasional use of this remarkable invigorant. The disease would seem to have an infinite variety of

## SYMPTOMS:

Among these are constant pain or uneasiness at the pit of the stomach, oppression after eating, spasms in the stomach and diaphragm, morning nausea, pain between the shoulders, fluttering of the heart, constipation of the bowels, irritability, broken sleep, nightmare, loss of memory, dimness of sight, prostration of strength, dull, stupefying headache, want of appetite, flatulency, and a feeling of despondency and despair wholly independent of external causes. All the evils in this mournful catalogue are not merely alleviated, but invariably removed, by a few bottles of HOSTETTER'S BITTERS.

## LIVER COMPLAINT.

Persons who languish for years under apparently incurable affections of the liver, the symptoms of which are pain in the right side, pain in the back and loins, a yellow suffusion of the skin and whites of the eyes, extreme indigestion to exertion, complete loss of mental activity, despondency almost amounting to mania, and great bodily weakness, all which are vanquished by the soothing and invigorating properties of this restorative.

## TO PERSONS WHOSE HEALTH IS BROKEN DOWN.

When the flames of life wane and quiver from exhaustion, administer this famous restorative. It will once more become steady and strong. In the debility which follows violent fever, in diarrhoea, dysentery, dyspeptic complaints and cholera; in the weakness consequent upon natural decay, or resulting from free living or over-exertion, and also in those painful and too much neglected ailments to which ladies are exclusively subject, the Bitters never fail to give permanent relief.

## CALIFORNIANS

Should test the merits of Dr. Hostetter's Stomach Bitters. While it is highly palatable as a beverage, it is unequalled as a tonic and invigorant. In the pursuit of a fortune at the mines, many persons are exposed to attacks of complaints of the digestive organs, and of various kinds of fever. It is the very article that has so long been in demand at the mines.

## FEMALES.

Thousands of ladies resort to it as a remedy for hysteria, fluttering of the heart, nervous headache, vertigo, general debility and all peculiar disturbances and derangements to which, as a sex, they are subject. It cheers and lightens the depressed mental powers as well as strengthens the body, and its use is never followed by any unpleasant reaction.

## A WORD TO THE AGED.

In the decline of life, the loss of vital force consequent upon physical decay, can only be safely supplied by some vivifying preparation which recruits the strength and spirits, without entailing the exhaustion which is always the final effect of ordinary stimulants. It tones the stomach, improves the appetite, acts like a charm upon the spirits.

## BOTH SEXES,

Who suffer from general debility, without any physical pain or other symptoms of a deranged organization, will find great benefit from their vivifying influence on the frame and constitution; and where there is a deficiency of vital force they communicate the energy and vivacity which nature has neglected to supply.

The feeble girl, the ailing wife, the nursing mother, the overtasked man of business, the man of pleasure, under the reaction that follows over-exertion, and all who have a predisposition to paralysis, will do well to resort to this incomparable tonic and restorative.

## DR. HOSTETTER'S STOMACH BITTERS

Should be in the possession of everybody in the mining region. As a preventative against various diseases to which the gold seeker is liable, it has no superior. In all cases of Diarrhoea, Dysentery, and the prevailing fevers consequent upon exposure, the Bitters will be found invaluable as a corrective.

## COUNTERFEITS.

Counterfeits are said to be the homage paid by knavery to success, and from these left-handed compliments Hostetter's Stomach Bitters have not been exempted. Vile imitations of the article are abroad, and the public are earnestly requested to be on their guard against them.

Sold by druggists and dealers everywhere.

HOSTETTER, SMITH & DEAN,  
Sole Agents for the Pacific Coast.

227 Montgomery street (Russ Block), San Francisco. [au28]

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skilful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skilfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skilful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertion in the new and growing city of the Pacific.

We subscribe ourselves yours,  
Rev. W. Stanton, L.L.D.,  
Richard A. Vaux,  
Dr. Straud, M.D.,  
Dr. Loomis, M.D.,  
Cleopole Stevens, M.D.,

Henry B. Linton, M.D.,  
Wm. L. Howard, M.D.,  
Philippe Lidy, M.D.,  
Myers Davis, M.D.,  
W. M. Thompson, M.D., and others.

No. 718 Catharine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skilful surgeon.

Mrs. W. Patridge, Walnut street.

From Dr. W. L. Stevens: Dr. Kennedy has operated upon my feet, and has effectually cured me of some torturing pests that I have been annoyed with for years.

From the Rev. Walter M. Thompson: This is to certify that while sojourning in Philadelphia, Dr. Kennedy has operated on three of my family to my entire satisfaction.

From the Hon. Wm. M. Thorne, ex-member of the Ohio Legislature: This is to certify that I called on Dr. Kennedy to operate on my feet: He displayed great skill as a surgeon, and I am satisfied that he has effectually cured me of those torturing pests which have annoyed me for many years.

From Geo. F. Omerly, 637 Arch street: This is to certify that I called on Dr. Kennedy. He has operated on my feet to my entire satisfaction. au21

## 50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS. IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.  
For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed Oil. If a lighter color is wanted, mix less paint, more lead.  
ROOF:—Five parts of Mineral Paint, one part white lead; mix with Linseed Oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

# Mining and Scientific Press.

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI.

SAN FRANCISCO, SATURDAY, NOVEMBER 8, 1862.

NO. 4.

MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC  
PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

## The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

## The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

## The Mechanic and Manufacturer!

Will be greatly benefitted by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

## To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

## Terms.

To mail subscribers.—Four Dollars per annum.

## Club Rates.

Five Copies for Six Months, \$8.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

W. B. EVER, Publisher,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

## ARTS & SCIENCES

## Distance to which Sound will Travel.

The cannonading at the first battle of Bull Run was heard in Preston county, Virginia, 124 miles distant. At a place called The Glades The sounds were faint, yet distinct, and so obviously due to artillery as to attract the attention of very many people and produce the conviction that a battle was going on, though it was supposed at the time to be at no great distance. Two persons in particular, gave close attention to the reports during most of the time. Two young ladies, also, of the family of Mr. Freeland, went after dinner to the top of a hill near by, where they heard the reports more distinctly, and remained there listening an hour or more. At night people came in from the neighborhood to learn where the battle had been.

At Kingwood, the county seat, the cannonading was heard more distinctly than at The Glades, the place being on higher ground.

Army officers at Oakland, some 15 miles west of Kingwood, on the Baltimore and Ohio Railroad, heard the same, and said a battle was going on.

The subject was a matter of common remark that day, and the next, before the news of any battle had been received. The sound came from the east or southeast. The day was clear and calm, with little or no wind. The next day the wind was from the east, with rain. The places named are nearly at the summit of the Alleghenies. Kingwood is about 125 miles from Bull Run in an air line.

The above facts were communicated by Mr. C. S. Lyman, to Professor Silliman of Yale College, by whom they were published in his Journal of Science, with the following comments:—

It is a commonly received opinion that sound travels farther and more loudly on the earth's surface than through the air—thus the cannonading at Jena in 1806 was very feebly heard in the open fields about Dresden—distance 92 miles—but very distinct in the casemates of the fortifications of Dresden. The Glades are nearly at the height of land of that part of Virginia, probably not less than 2500 feet above the sea. It is certain that at a great number of places within a radius of 125 miles from Stone Bridge, where the Bull Run cannonading occurred, the sound was not heard—and it seems probable that its distinctness at The Glades was due chiefly to the elevation of that place. It is well known from the experience of aeronauts that sounds are heard with much greater distinctness from the earth to a balloon than on the earth from the balloon. In deep valleys sound may be cut off by reflection, the mountains acting as screens—while the same sounds are distinctly heard on eminences at greater distances.

This is probably the greatest distance at which cannonading was ever heard.

CAPT. Erickson says that either of his two new Monitors will, by their great strength and wedge-shaped prow, be able to split an iceberg.

COPPER ORE.—The Messrs Molitor of this city have recently received a quantity of specimens from the Burri-Burri copper mines, Australia, which are quite interesting curiosities in their way. They also possess much geological interest.

IMPROVEMENTS IN IRON AND STEEL.—At a late meeting of the London Institution of Civil Engineers, a general retrospective view was given of the material progress of the world and the improvements which had been made in the iron manufacture during the last few years, and the changes that were now taking place were referred to; and it was stated that the result had been that, whereas the annual "make" of a blast furnace in the year 1750 was only about 300 tons, now it ranged from 5,000 to 10,000 tons per annum; and, in a few cases, amounted even to 15,000 tons per annum. In reference to wrought iron, it was said that the plan of reversing the rolls had been considerably extended, and occasionally a second pair of rolls had been placed close to the first, running continually in the opposite direction, so that the iron could be rolled either in coming forward, or in going back. Plates 1½ in. thick, by 3 feet wide, and 20 feet long, and plates 4½ in. thick by 3 feet wide and 15 feet long had been rolled, as well as bars up to 72 feet long. Most of the improvements in the manufacture of steel had been introduced within the last half century. Cast steel bells, weighing 5,300 pounds had been made in this country, and castings of steel weighing 10,000 pounds in Austria. Large plates and very heavy bars had been made of puddled steel, produced direct from cast iron; and, lastly, steel wire, when hardened to about a deep blue temper, was found capable of carrying 130 tons per square inch. More than one process had been used in the production of cheap steel, which had been found by recent experiments to possess nearly double the strength of ordinary iron, accompanied by other valuable properties. With regard to the application of iron, a new era commenced with the construction of the Conway and Britannia Bridges; as the elaborate experiments made prior to their construction tended to prove that previously received theories were in some respects erroneous. Again, the building erected for the Great Exhibition in 1851, from its lightness and security, called attention to the hitherto undeveloped capabilities of the combined use of cast and wrought iron for such purposes.

COAL WASTED BY BREAKING.—An immense amount of coal is wasted in the coal mines by the process of breaking up the coal into the proper size for market. In this operation a large percentage of coal is finely pulverized, and is thrown aside as unsaleable. This fine and wasted coal is of the purest quality. A correspondent of the New York World, writing from the Pennsylvania coal mines, states that at a single colliery, doing a good business, four hundred tons of coal a day is made to pass through the machine for breaking up the lumps, and the waste is about twenty per cent., or eighty tons daily. All this amount has to be mined, brought to the breaker, (two iron cylinders, with iron teeth, revolving in a horizontal position, paneled to each other, and about ten inches apart,) and after this process of destruction, has to be carried away and piled up. One will see at any colliery of several years' standing, hundreds of thousands of tons of this now worthless article—very pyramids. All this, except what little is made in the mines by blasting, has to be paid by the operator, and is a loss to the owner of the land as well as to the human family, and adds price to that which the consumer buys in the market. The waste at the collieries in Schuylkill and Luzerne counties, Pennsylvania, is believed to be over one million tons annually, worth \$5,000,000. The question is now asked, is there no way to save this valuable fuel? Here is a chance for inventors. Artificial fuel is now made in England from coal dross combined with a small amount of adhesive substance, such as coal tar, and it is used on long voyages by many of the best steamships. This artificial fuel is pressed into blocks, and is well adapted for packing in coal bunkers.

A new asteroid was discovered Sept. 25th. It is in the constellation Pisces, and is of the eleventh magnitude.

## SCIENTIFIC BALLOON ASCENSION.

An interesting balloon ascension was recently made in England by Mr. Glaisher, for scientific purposes. The ascension was made in the mammoth balloon belonging to Mr. Coxwell, who accompanied Mr. G. as aeronaut. The adventurers reached the highest point, above the earth, ever visited by man, and their observations have added an interesting and important chapter to the history of science.—The expedition was carried to an extent exceedingly dangerous, and indeed, was near proving fatal to one of the parties. We append the chief points of interest as given more in full in their published narrative:—

THE FREEZING POINT was found at the height of two miles. At an elevation of three miles the thermometer stood at 18° above zero and at five miles 2° below and no dew was observed on the hygrometer when cooled down to minus 30°. Up to this point the observer, Mr. Glaisher, had experienced no difficulty in breathing, while Mr. Coxwell, in consequence of the necessary exertion he had to make, had breathed with difficulty for some time.

DIMNESS OF SIGHT began to be experienced at an elevation of five and a quarter miles, which Mr. G. thus narrates:

At a height of about 5½ miles, I read the dry bulb as minus 5°; in endeavoring to read the wet bulb I could not see the column of mercury. I rubbed my eyes, then took a lens, and also failed. I then tried to read the other instruments and found I could not do so, nor could I see the hands of the watch. I asked Mr. Coxwell to help me, and he said he must go into the ring, and he would when he came down. I endeavored to reach some brandy, which was lying on the table at about the distance of a foot from my hand, and found myself unable to do so.

TOTAL LOSS OF POWER was indicated at about five and three quarter miles elevation, as will be noticed from the following continuation of the above paragraph:—

My sight became more dim: I looked at the barometer and saw it between 10 and 11 inches, and tried to record it, but I was unable to write. I then saw it at 10 inches, still decreasing fast, and just noted it in my book; its true reading, therefore, was at this time about 9¾ inches, implying a height of about 5¾ miles, as a change of an inch in the reading of the barometer at this elevation takes place on a change of height of about 2,500 feet. I felt I was losing all power, and endeavored to rouse myself by struggling and shaking. I attempted to speak, and found I had lost the power. I attempted to look at the barometer again; my head fell on one side. I struggled and got it right, and it fell on the other, and finally fell backward.

My arm, which had been resting on the table, fell down by my side. I saw Mr. Coxwell dimly in the ring. It became more misty, and I sank unconsciously as in sleep. I then heard Mr. Coxwell say, "What is the temperature? Take an observation; now try." But I could neither see, move nor speak. I then heard him speak more emphatically. "Take an observation: now do try." I shortly afterward opened my eyes, saw the instruments and Mr. Coxwell very dimly, and soon saw clearly, and said to Mr. Coxwell, "I have been insensible;" and he replied, "You have, and I nearly."

I recovered quickly, and Mr. Coxwell said, "I have lost the use of my hands; give me some brandy to bathe them." His hands were nearly black. I saw the temperature was still below zero, and the barometer reading 11 inches, but increasing quickly. I resumed my observations. I found that the water in the vessel supplying wet bulb thermometer, which I had by frequent disturbances kept from freezing, was one solid mass of ice. Mr. Coxwell then told me that while in the ring he felt it piercingly cold, that hoar frost was all round the neck of the balloon, and on attempting to leave the ring he found his hands frozen, and he got down how he could; that he found me motionless, with a quiet and placid expression on the countenance. He spoke to me without eliciting a reply, and found I was insensible. He then said he felt insensibility was coming over himself; that he became anxious to open the valve; that his hands failed him; and that he seized the line between his teeth, and pulled the valve open until the balloon took a turn downward.

Mr. Glaisher is of opinion that the balloon, during their state of partial insensibility, and at the time Mr. Coxwell opened the valve with his teeth, must have stood at an altitude of 6, if not 6½ miles from the earth!

Six pigeons were taken up. One was thrown out at the height of three miles; it extended its wings and dropped as a piece of paper. A second, at four miles, flew vigorously round and round, apparently taking a great dip each time. A third was thrown out between four and five miles, and it fell downwards. A fourth was thrown out at four miles, when we were descending; it flew in a circle, and shortly after alighted on the top of the balloon. The two remaining pigeons were brought down to the ground. One was found to be dead, and the other (a carrier) had attached to its neck

a note. It would not, however, leave, and when jerked off the finger, returned to the hand. After a quarter of an hour it began to peck a piece of ribbon encircling its neck and I then jerked it off my finger, and it flew round two or three times with vigor, and finally towards Wolverhampton. Not one, however, had returned there when I left on the afternoon of the 6th.

Mr. G. adds the following by way of inference;

It would seem from this ascent that five miles from the earth is very near the limit of human existence. It is possible, as the effect of each high ascent upon myself has been different, that on another occasion I might be able to go higher, and it is possible that some persons may be able to exist with less air and bear a greater degree of cold; but still I think that prudence would say to all, whenever the barometer reading falls as low as 11 inches, open the valve at once; the increased information to be obtained is not commensurate with the increased risk.

The London Times, commenting upon the perilous enterprise, observes:

The aerial voyage just performed by Mr. Coxwell and Mr. Glaisher deserves to rank with the greatest feats of our experimentalists, discoverers and travelers. It is true these gentlemen have not brought down a very comfortable or inspiring report of the upper world into which they have penetrated. Science and poetry are unhappily rather at variance upon the subject of the air and the sky. Poetry points upward to the sky with glowing rapture as the scene of brightness and glory, and a residence there figures as the reward of heroism and greatness. Everything is happy and splendid that is connected with the sky. But science penetrates with its material eye into those vast upper spaces and simply reports a great difficulty of breathing there; that the blood stagnates, the limbs become benumbed, the senses evaporate, and nature faints in unconsciousness. The very birds will not fly in that very sky which is their poetical home. The distinction is that poetry looks up to the sky from below, and science examines and feels it on a level. The sky is the emblem of poetry, the fact of science. Both aspects of it are equally true, but the point of view from which they are taken is quite different. But, though our recent explorers of the sky do not add to its brilliancy as a picture, they have furnished one more striking and impressive scene to the history of science. They have shown what enthusiasm science can inspire and what courage it can give. If the man, as the poet says, had need of "triple steel about his breast" who first launched a boat into the sea, certainly those had no less need of it who first floated in the air six miles above the surface of the earth.

MARK WEST CREEK COAL.—The newly opened coal mine is a matter of no ordinary interest to the people of this part of the country, and great hopes are entertained of its extent and value. A sample load of the article was shipped on Wednesday to San Francisco, where judgement will be pronounced of its merit. Should the quality prove good, no one as yet doubts of the quantity obtainable. The company, styled the Healsburgh Coal Mining Company, was formed about the first of May, and has been prospecting up to the present time, having, at the depth of 126 feet, found a ledge of coal that works well in a forge, and we think will turn out better than any yet found in the State for the manufacture of gas. We understand the company intend furnishing the Petaluma steamers a sufficient quantity to prove its efficacy for steam and foundry purposes.

On the 6th ult. the first meeting of the company under its incorporation was had, when the following officers were elected:

President—W. J. Harrison; Secretary—J. G. McManus; Treasurer—G. H. Peterson; Superintendent—B. C. Wattles.—Healsburgh Review.

MAGNIFICENT VIEW OF THE LATE BATTLE OF ANTIETAM. A correspondent of the New York Tribune writing of the great battle of Antietam, on Wednesday, September 17, says: The opportunity for seeing the battle was unparalleled. A single stand point commanded nearly the whole field from dawn to dark. No one who looked upon that wonderful panorama can describe it; neither can any one who saw forget. Contrary to his usual policy the enemy met us in open country, and he was pressed back. But every hill and valley, every corn-field, grove and cluster of trees was fiercely fought for. The artillery was unceasing; we could often count more than sixty guns to the minute; and the musketry was like the patter of rain drops in an April shower. On the great broken field were riderless horses and scattered men; clouds of dirt from shot and exploded shells, long dark lines of infantry swaying to and fro, with columns of smoke rising from their muskets—with flashes and white puffs from the batteries—with the sun shining on all this scene of tumult, and beyond it, upon the dark rich woods, and the clear blue mountains, flows the Potomac. Amid all the screaming of shot and thundering of cannon and whistling of balls with the fearful courage they brought, I saw no considerable breaking among our troops, save with several new regiments in Sumner's corps.

THE Mining Companies recorded in San Francisco, in the month of September represent—on paper—a capital of \$15,345,000.

SILVER MINING IN NORWAY.—The silver mines of the vicinity of Kongsberg, Norway, are now attracting the attention of the English mining public. It is reported that an English Company has purchased the Anna Sophia district, and intends to work it in a spirited manner. Operations have been suspended there since 1805. A correspondent of the London Mining Journal makes the following observations:—

The Kongsberg Mines are unquestionably very remunerative, but the State retains in its own possession the very limited territory where native silver is likely to be found in sufficient quantity to pay for working. A Norwegian company has for some years been exploring the most likely district in the neighborhood of the Kongsberg Mine, and every year considerable calls have been made. The other sets were taken up by speculators without capital, on the chance of selling them in London; though such a transfer is, by the conditions of the auction at which the sets were acquired, illegal. No doubt silver exists beyond the bounds of the Kongsberg sett, for innumerable trials by private parties, as well as by the Government, prove it; but the quantity has been in every case inadequate to meet the expenses; and whatever is found must be sold at a fixed rate to the royal smelting-house.

STRAIGHTENING A CHIMNEY STACK.—This operation, for restoring the colossal chimney at Port Dundas to a perpendicular and safe position, has been successfully completed.—This was accomplished by sawing several of the mortar beds between the courses on the side from which the chimney leaned, thereby allowing it to come back by its own weight, without the application of any external force. Only one draft was cut at a time, to guard against any shock which might have endangered the stability of the building; and, by keeping the saws wet, a bed of mortar was prepared for the superincumbent weight to settle down upon. Twelve cuts were made in this manner on different parts of the structure, which generally set before the saws had passed through half of the circumference, particularly in those made nearest the ground, where the weight was greatest.

Mr. Duncan Macfarlane, architect, by whose advice this method was adopted, superintended the undertaking. The principle dimensions of the chimney are:—Total height, 408 feet; from surface to top of the coping, 454 feet; outside diameter at foundation, 50 feet; at surface, 34 feet; at coping, 14 feet. According to calculations made by Professor Rankine, the building, independent of the adhesion to mortar, is capable of sustaining with safety a lateral pressure of 66 lbs. per superficial foot at its weakest point, being 11 lbs. more than the force of the greatest storm registered in this country.—North British Mail.

A great rarity in the shape of a coin has lately been sold in Paris, namely, a silver one struck off at Breslau, 1751. Among the persons employed at that time in the mint was an Austrian, who, out of hatred to Frederick II. of Prussia, who had taken possession of Silesia by right of conquest, conceived the idea of revenging himself on that monarch in the following manner: The motto on the coin, "Ein reichs thaler," [a crown of the kingdom,] he divided in such a manner as to make it read, "Ein reich stahler," (he stole a kingdom.) The king ordered these insulting coins to be all melted down, but some of them still exist.

A new field gun has been invented, designed to throw grape and canister with fearful rapidity and effect.—It consists of five barrels, a sliding breach, having a corresponding number of chambers in which the charges are inserted, the gunner having no occasion to go to the front of his gun. A shield of metal plate, at an angle of forty-five degrees, protects the gun and the cannoniers. It is easily constructed, and in an emergency may be effectually disabled. The chambers are formed by longitudinal bars, the whole securely bolted together. The bore is square. The inventor claims to be able to throw with a full battery nearly a thousand pounds of grape in every forty seconds. The gun, by a peculiar construction, scatters sideways only, not up and down, as in ordinary guns.

THE COAL FIELDS OF OHIO.—It is almost melancholy to contemplate the vast beds of coal and ore in the United States, and see how little there has been done to develop them, while we are annually paying Great Britain millions upon millions of dollars for iron manufactures. The coal fields of the single State of Ohio are larger than those of Great Britain, while the latter has been used with such skill and energy as to create a manufacturing industry and production, beyond anything the world has ever seen, in an equal space. Ohio can produce more than thirty times the coal it now produces annually. The entire amount of coal annually produced in Great Britain, may be mined in Ohio for 500 years, without exhausting more than one seam, while it is well ascertained that in a thousand feet in depth, there are four or five seams. The 12,000 square miles of coal in Ohio is scarcely a fourth part of the coal basin of which it is a part, comprehending large portions of Western Pennsylvania, Virginia, Kentucky, and Tennessee. This is the Eastern coal deposit of the North-Western States; but there is also a Western of still greater magnitude.

TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Title of Company and names of officers for the year.	Am't of stock & value per share.	When incorporated

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.

Routes and Fares from San Francisco to Foreign and Domestic cities.

**Pacific Mail Steamship Company**—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

**Nicaragua Steamship line**, Ross, Dempster & Co., agents. —Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

**California Steam Navigation Company** dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petaluma, \$3. **Overland Mail Company**—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

DEETKEN'S

Chemical and Metallurgical Works,  
ON SAN BRUNO ROAD, ISLAIS CREEK,  
SAN FRANCISCO.

**CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON.** ALL THE GOLD EXTRACTED BY CHEMICAL PROCESS. Yield of Sulphurets from 30 to 50 per cent higher than the BEST AMALGAMATION PROCESS. Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov8-3m

Homesteads Cheaper than Proposed under the Shafter Bill.

UNDER THE PROVISIONS of what is known as the Shafter Bill, it is proposed to sell the city title to homestead lots for twenty-five to two hundred dollars each. The undersigned will sell homestead lots within the limits of the city, and miles nearer to the business centre than many of the lands covered by the Shafter Bill, and place the party in immediate possession of the same, without present trouble or prospective lawsuits, for from \$10 to \$20 each. THE TITLE is absolutely PERFECT, being a Spanish Grant, finally confirmed and patented by the United States. The Shafter Bill respects this title: the city authorities respect it; the District Court and the Supreme Court of the State, as well as the District Court and Supreme Court of the United States respect it; besides the TITLE HAS BEEN FOREVER QUIETED BY A FINAL DECREE AND JUDGEMENT AGAINST THE CITY so that there is not even a cloud or shadow upon it. Whoever purchases one of these lots will buy a lot, not a lawsuit. Office No. 19 Naglee's Building corner of Montgomery and Merchant sts. HARVEY S. BROWN. m22

REMOVAL.

**OFFICE OF THE PACIFIC METALLURGICAL WORKS** is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day. Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased. COPPER OBES—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent, 318 California street, near Sansome, up stairs. my30

LEANDER RANSOM,  
CIVIL ENGINEER  
AND SURVEYOR,

Having been connected with the public works of the State of Ohio for 20 years, and the public works of the State of California for 7 years.

ALSO, STATE LOCATING AGENT.

And as such having the sale of  
600,000 ACRES OF THE STATE SCHOOL LANDS,  
At the low price of \$1.25 per Acre.

Terms—Twenty-five per cent. in cash, and the balance on a credit of several years.

OFFICE: Second floor of Express Building, N. E. corner of Montgomery and California streets. oct 3m

**AGENCY FOR PATENTS.**—The undersigned having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Caveats and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETTLER & TIFFANY,  
Office, 410 Montgomery street.

LATEST IMPROVEMENT  
In LADIES' BUCKLES.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS  
State, as well as to Jewelers and dealers in Jewelry, that he has made  
important improvements in BUCKLES, which surpass any and all heretofore  
made. Their simplicity, commodiousness, and beauty render them the  
most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or  
address, FREDERICK REICHEL,  
Manufacturing Jeweler,  
620 Merchant street, San Francisco. sep11

THE  
NEW ENGLAND EWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before  
the public. In cheapness, neatness, compactness, durability and beauty,  
it has no rival. It is made with special reference to the wants of a family,  
and any one with the aid of the printed directions can learn to work it  
successfully in a few hours. It will work from leather to the finest cambric  
without the change of needle, tension, or feed. It gives the best satisfaction  
where it is sold, and all who use or examine pronounce it better adapted to  
meet the wants of every family than any other machine now offered to the  
public. Guage and bummer attached.  
Every machine warranted, and kept in order free of charge. This is the  
only cheap machine that will do all kinds of family sewing.

STEWART & SHEAR, General Agents,  
No. 60 Second street. sep11

Deeds for California Virginia City, N. T. my23

THE FOLLOWING GOODS TO BE FOUND AT  
H. D. PEARCE'S:

Gents' Heavy Gold Cases, different patterns;  
Ladies' Heavy Gold Cases, do do;  
Gold Telescopic Pen and Pencil Case;  
Extension Screw, Heavy Silver, for Gents';  
Extension Screw, Heavy Silver, for Ladies';  
Silver Extension Cases;  
Silver Telescopic Cases;  
Screw, Silver and Ebony Desk Holders;  
Slide Silver and Ebony Desk Holders;  
Reverse Silver and Ebony Desk Holders;  
Pen Holders, Silver and Ebony;  
Pen Holders, Gold and Ebony;  
Pen Holders, Gold and Ivory;  
India Rubber Propelling Pen and Pencil Cases;  
India Rubber Propelling Pencils, short.

All the above goods are made to order and warranted; will be sold  
cheap for cash. There are some thirty different patterns, leaving an opportunity for parties to select and be suited.

A cheaper class of Pens direct from New York, at wholesale only.

Gold Pens constantly on hand. Gold Pens repaired.  
H. D. PEARCE,  
606 Montgomery street, between Clay and Merchant, up stairs.

GREAT REDUCTION  
IN PRICES.

## Mining and Scientific Press.

W. B. EWER, Editor.

SATURDAY..... NOVEMBER 8, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance. Advertisements at FIFTY CENTS per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

WE execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the *Mining and Scientific Press*, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## Notice to our Friends and the Public.

The undersigned, your most obedient servant, begs leave to retire from the publication of the far-famed and wide-spread *Mining and Scientific Press*. In bidding adieu to my many friends and patrons, I cannot omit expressing my sincere thanks and obligations for the many favors and kind acts rendered unto me. We leave the tripod with regret, though a responsible one, and full of care and much labor. For three years have we labored and toiled for the advancement and progress for which the *Press* has been called into existence, and we are assured and feel confident that we have not labored in vain. There is, however, much evil to be remedied, and this we leave to our able successor, W. B. EWER, Esq., who will from this date conduct the *Press*, with his usual good judgment, talent and capacity. I would ask the friends of the *Press* to aid him in his efforts, and to perpetuate the advocate of our chief resources.

In a few months, we take our departure for the Atlantic States and Europe, for the purpose of rendering great service to our Pacific States! of which due notice will be given. We sever our connection with the *Press* so far as business matters go, but we shall ever find time to give through its columns matters of importance regarding discoveries, inventions and improvements in every branch of science, arts and industry, especially when we shall be far off on the European Continent. Very respectfully,

JULIUS SILVERSMITH.

San Francisco, Nov. 1st, 1862.

No portion of the globe offers a more inviting field for the publication of such a paper as is contemplated in the prospectus of the *Mining and Scientific Press*, than the state of California. The mineral resources of the Pacific coast have already astonished the world—not less by their unparalleled richness, than in their remarkable variety and extent. Though but little over a single decade has elapsed since California was known simply as an exporter of hides and tallow, still that brief period of time, under the magic influence of the few grains of shining metal accidentally brought to light on the banks of one of her mountain streams, has been sufficient, under the potent direction of Anglo Saxon energy, to establish within her borders the foundation of an empire which is even now felt as a power in the world, and to which the nations are already looking as the great center from whence, at no distant day, must radiate all the chief arterial currents which give life and energy to every department of industry and commerce throughout the earth.

The mineral resources of the Pacific coast, great as they already appear, are yet only in the infancy of their development. Hitherto the attention of our people has been mainly directed to searching for the precious metals. In the early future a heavier and much more important class of mining is to be undertaken. Recent explorations have pretty fully demonstrated the existence, in our valleys and mountains, of unlimited quantities of coal, iron and copper, which are the real foundations of all material wealth, and without which no people can hope to rise to any commanding position in the present progressive age of national advancement.

With such a field before us, and in a community so prolific of publications on almost every conceivable topic, it would indeed be a matter of surprise if not one journal was found devoted to the great leading interest of the State,

and to the mechanical and industrial pursuits which are the necessary adjuncts of every important mining community. Such a paper we have—already established and continued for upwards of three years, under discouraging circumstances it is true, but nevertheless continued as the only special exponent and advocate of an interest, second in prospective importance to none on the globe!

The course of events has thrown this publication, known as the *MINING AND SCIENTIFIC PRESS* into the hands and under the control of the undersigned. Numerous friends and parties having a deep interest, pecuniarily and otherwise, in the development of the mineral resources of our state, and the permanent establishment of an organ which shall be a suitable and worthy exponent of such an enterprise, have induced us to undertake the task of its editorial control. We should shrink from such a responsibility were it not for the fact that we have been promised the aid and assistance of numerous well known writers, of practical and scientific attainments, to assist us in our labors; and it is in confident assurance of such aid that we venture to promise the readers and patrons of the *Press* that this publication shall be made both a welcome and instructive visitor to the miner, the mechanic and the merchant; and that its columns shall ever be replete with information useful and interesting, embracing within its scope all the arts and sciences, and trades and manufactures, in addition to the great leading features of mining and metallurgy.

The miner will find from time to time, carefully digested, every class of information which shall be useful to him in his laborious and precarious calling. We shall arrange, at an early day, for careful and reliable correspondence from all the important mining sections of our State and the Pacific coast generally, not forgetting the great mineral region now looming up in such magnificent proportions all along our eastern mountain border. Particular attention will also be devoted to the general interest and advancement of the mechanic and workingman; and especial effort will be made to render the columns of the *Press* useful, instructive and advantageous to their peculiar interests, by imparting to them early and full knowledge of late and approved discoveries in science and art, and placing in review before them the most useful information already obtained and reduced to practice in their various departments of industry.

In fact, to everything coming within our peculiar field of observation, we shall pay especial attention. The importance of home manufactures and productions, and all efforts of native ingenuity and talent will receive encouraging notice. We shall endeavor to keep our readers properly advised with regard to what the philosopher, the inventor, the artisan, the mechanic and the miner may be doing, each in his peculiar department, whenever such knowledge shall be deemed of general interest or utility. With these purposes well and truly carried out, we feel assured that our efforts will not be without avail in the general accumulation of useful knowledge, and that they will be duly appreciated, and rewarded with a commensurate support from a community so proverbially liberal in the encouragement of all useful undertakings as Californians are universally acknowledged to be.

W. B. EWER.

VERY LIKELY.—British traders and trappers have found diggings on the east side of the Rocky Mountains, a few miles south of the national boundary. They express the hope that our Government will permit the alteration of the line so that those mines shall be in the British possessions. This expression of "hope" is very modest, to say the least; and we presume the recent cordial and humane acts of our British friends in allowing the fitting out, repairing and coal-ing of rebel privateers in their harbors, and at the same time refusing federal war vessels the same privileges, are considered by them as fully warranting the inference that our Government will, in return, oblige them by changing the national boundary so that certain mines now our own may become British property—very likely!

A SAVING.—The California merchants are now paying their debts in legal tenders. By the last steamer one could purchase a draft for \$1,000 by paying \$800 in gold, so that the California trader saved twenty per cent. A handsome profit and easily made.

A NEW style of light wagon now driven by gentlemen on he road in England is called a wagonette.

A VERY PROPER PRECAUTION.—The Grand Jury of Virginia City, N. T., at their late sitting, recommended that their representatives in the next Territorial Legislature should advocate the passage of a law compelling the owners of mining shafts, not in use, to either fill them up or cause them to be properly secured against the accident of persons falling into them. This we conceive to be a very wise and proper precaution, especially in the vicinity of all populous neighborhoods. Scarcely a week occurs that we do not notice the result of severe or fatal accidents which have occurred from this source. As we write, no less than three are noticed in papers lying upon our desk, one of which was fatal. Such legislation might be had as would empower municipal authorities or county supervisors, to take notice and designate such localities as it might be deemed proper to keep guarded against this class of accidents. Heartless and deficient in every human feeling must be any party or parties who, after digging a shaft for the purpose of obtaining "filthy lucre," and after finding themselves disappointed fail or refuse to place some safeguard over the dangers they have created.

THE SAN FRANCISCO QUICKSILVER MINE.—Quite a little excitement was created on Montgomery street a few days since by the exhibition of a very pretty specimen of cinnabar, said to have been taken from a ledge upon the line of the Spring Valley Water Works, at the point where the Company is constructing a reservoir, near the Orphan Asylum. The specimen referred to was quite rich, but a subsequent visit to the locality failed to convince us that the "discovery" is very promising of any other mineral than an excellent article for McAdamising the sandy roads of that vicinity.

A NEW INVENTION.—The success of Ericsson in revolutionising naval warfare by the construction of his Monitors, seems to have given a new direction to Yankee ingenuity.—Having taught the world how to build and fight those naval monsters, our inventors have already entered upon the task of teaching it how to *destroy* them. If they do not succeed we shall think the "Universal Yankee" has forgotten his cunning—or in common parlance is "played out." That such is not the fact we have an earnest in the following paragraph which we clip from an Eastern Exchange:—

A correspondent of the Boston *Traveler*, writing from the United States steamer Kearsarge, says that the Chief Engineer of that vessel, Whittaker, has made an invention designed to destroy iron-plated vessels, and that the officers all believe that he has succeeded. The Captain has ordered him home to report to the Navy Department.

MOUNTAIN HEIGHTS.—The height of Mount Shasta has recently been taken by Professor Whitney, of the California Geological Survey, and ascertained to be 14,440 feet above the level of the sea, or 1,450 feet higher than Mount Hood in Oregon. Mount Shasta is the highest mountain in the United States, the measurement of which has been scientifically ascertained.

During the recent visit of the Professor to Washoe, he also ascertained the height of Mount Davidson 7,827 feet above tide water. Mr Whitney is provided with excellent instruments, and his estimates can be relied upon as correct.

PRONUNCIATION OF "AFTERTAM."—The Baltimore American—good authority—says that the name of the last great battlefield, should be pronounced An-tee tam. This is not only euphonious, but is the pronunciation employed by the inhabitants of that vicinity themselves. It is well that a name which is destined to occupy such an important place in history should be correctly pronounced by the people to whose glory it will redound.

AN account of a tremendous hail-storm in West Lavington and Easterton, England, is published in the London Times. It is said that the hail fell to the astonishing depth of seven feet in less than half an hour. Large fields of unharvested crops were ruined, and many fowls were killed.—The hail was accompanied by rain, and a fearful flood resulted, which filled cellars and greatly increased the damage done.

CAMELS.—A train of six Bactrian camels arrived in Virginia City, N. T., recently. Each animal came through with six hundred pounds on his back.

## The Divisibility of Matter.

Everything which is the object of our senses is composed of matter differently composed or arranged. But in a philosophical sense matter is defined to be an extended, solid, inactive and moveable substance.

Every portion of matter, however minute, must have two surfaces at least, and it follows of course that it is divisible; that is, the upper and lower surfaces may be separated; and though there may be particles of matter too small for us actually to divide, yet this arises from the imperfection of our instruments; they must nevertheless, in their nature, be divisible. A few years since a lady spun a single pound of wool into a thread 168,000 yards long. And Mr. Boyle mentions that two grains and a half of silk were spun into a thread 300 yards in length. If a pound of silver which contains 5,760 grains, and a single grain of gold be melted together, the gold will be equally diffused through the whole silver, inasmuch that if one grain of the mass be dissolved in nitric acid, the gold will fall to the bottom. By this experiment it is evident that a grain may be divided into 5,760 visible parts, 5,751st part of the gold is contained in a single grain of the mass.

Goldbeaters can spread a grain of gold into a leaf containing 50 square inches, and this leaf may be easily divided into 500,000 parts, each of which is visible to the naked eye; and by the use of a microscope, which magnifies the area or surface of a body 100 times, the 100th of each of these is visible: that is the 50 millionth part of a grain of gold will be visible, or a single grain of that metal may be divided into 50 millions visible parts. But the gold which covers the silver wire used in making what is called gold lace, is spread over a much larger surface, yet it preserves, even if examined by a microscope, an uniform appearance. It has been calculated that one grain of gold, under these circumstances, would cover a surface of nearly thirty square yards.

The natural divisions of matter are still more surprising. In odoriferous bodies, such as camphor, musk, and asketida, a wonderful subtlety is perceived; for though they are perpetually filling a considerable space with odoriferous particles, yet these bodies lose but a very small part of their weight in a great length of time.

It is said by those who have examined the subject with the best glasses, and whose accuracy may be relied on, that there are more animals in the melt of a single codfish, than there are men on the whole earth, and that a single grain of sand is larger than four millions of these animals. Now if it be admitted that these little animals are possessed of organized parts, such as heart, stomach, muscles, veins, etc., and that they are possessed of a complete system of circulating fluids similar to what is found in larger animals, we seem to approach to an idea of the infinite divisibility of matter.

It has been calculated, that a particle of the blood of one of these animalculæ is as much smaller than a globe one-tenth of an inch in diameter, as that globe is smaller than the whole earth; nevertheless, if these particles be compared with the particles of light, it is probable they would be found to exceed them in bulk as much as mountains do grains of sand. Many other instances of the extreme divisibility of matter, might be enumerated but these are sufficient to show into what very minute parts matter is capable of being divided.

We shall send copies of the present issue of the "PRESS" to many of the old subscribers to the "CALIFORNIA MINING JOURNAL," formerly published in Grass Valley, Nevada County. We should be pleased to add the names of such of our old friends and former readers of the MINING JOURNAL, as may choose to aid us in our present undertaking. The "MINING JOURNAL AND SCIENTIFIC PRESS" will be published every Saturday morning at \$4 per annum, at No. 24, Federal building, San Francisco, and being the only mining paper in the State we trust the friends of mining enterprise, and all who would keep thoroughly posted with regard to the great leading interest of the State, will send in their orders for the "PRESS." The paper has now become permanently established, having already entered upon the fourth year of its existence.

The *Herald* of this city, of a recent date, chronicles as a notable circumstance, the fact that not a single mining company was incorporated on the day previous.

**TREATING IRON PYRITES.**—An invention has recently been patented by Mr. John Longmaid, of Scotland, for treating iron pyrites and other ores containing copper, silver, and tin, or either of them, and sulphur, which consists in first crushing the ore and passing it through a sieve having about 100 holes in the square inch, and afterwards calcining it and treating with common salt. The invention appears to be a modification of or improvements upon, the inventions of Mr. William Longmaid, patented 1842, 1844, and 1845. According to the new invention the partially calcined pyrites and salt are kept at a low red heat, until decomposition converts them into sulphate of soda and soluble chlorides of the metals. These are washed out and precipitated with iron in the usual manner.

**A NEW APPLICATION OF STEAM.**—A novel experiment is announced as soon to be tried by a steam fishing vessel lately fitted up at Leith. Her trawling gear, which is very heavy, is to be wound up by a capstan driven by steam power, and all living fish thus taken will be put into a well, or salt water aquarium, having a constant circulation of water through it, and thus the fish will be kept in existence until brought to market. This is said to be the first direct application of the steam engine to the purpose of catching fish.

**SILVER BRICKS.**—The citizens of Virginia City, propose to send to the Sanitary Commission, the sum of \$20,000 in silver bricks. The *Enterprise* says: The shipment will be made in solid silver bricks, stamped with an appropriate inscription, and will prove the biggest ad vertisement for Nevada Territory that ingenious brains have yet conceived.—These silver bricks will be curiously examined and commented on by many a man in New York who would forget in fifteen minutes after he heard it, the fact that \$20,000 in gold coin or Treasury notes had been sent from the unknown land of Nevada.

**NORTH PACIFIC REVIEW.**—We have received from Messrs A. Roman & Co., Montgomery Street, the first and second numbers of the North Pacific Review, published in this city, and find them well filled with interesting matter, both original and selected. Each number is illustrated with an engraving, those in the numbers before us being portraits of the late James Donahue and the late Col. Doane—the latter of which is a remarkably striking likeness. The contents are varied to suit all tastes, from the lively, sparkling sketch, to the more sober paper on mining, scientific, or agricultural matters. A well written chapter of notices of new publications, being also one of the features. Judging from the numbers before us, the North Pacific bids fair to take a permanent place, as a first class literary monthly.

**THE CALIFORNIA IRON CLAD.**—The iron clad steamer for the defence of this harbor and coast, is rapidly approaching a completion. She is to be called the "Comanche," and will be a beautiful specimen of naval architecture.—The New-York correspondent of the Marysville Appeal states that when all is finished she will be put together, tried, and if everything works rightly, she will then be taken to pieces and shipped to California. She will differ in several particulars from most of the other Monitors; but all visitors are requested not to make public her important features. Her length is 250 feet, breadth and depth proportionate, and she is to be coated with iron of immense strength, and great thickness; and, in view of the precious national treasures she is to guard, she will carry a terrible armament.

**"OLD VIRGINIA" vs. OPHIR.**—The Territorial *Enterprise* of October 31st, in its "Stock Remarks" says:—

The "Old Virginia" bubble seems to have exploded; at least, there is little or no demand for Virginia. It has been offered to-day at a comparative low figure, with no takers.

THE CONNECTION of the present editor with this paper having been consummated somewhat hastily and unexpediently, he will be under the necessity of begging the indulgence of the patrons of the paper for a delay of one week in the next issue—a delay unavoidable to allow him time to visit his late mountain home and make the necessary arrangements for a permanent removal to this city. The next issue will therefore be made on Saturday, November 15th.

## WASHOE ITEMS.

**THE GOULD AND CURRY MILL.**—The *Enterprise* says that a large number of workmen are engaged upon this great work. A huge ore-house has been erected near the mill, and two or three immense walls are being constructed of cut stone for the protection of a terraced road-way and a large yard. A village of fifteen or twenty neat frame houses has sprung up about the mills, and everything in the neighborhood tells of an industrious and prosperous community. Ore from the Gould and Curry mine is now being crushed at the Hoosier State mill.

**THE DANBY MILL** is a large first class mill, and fast approaching completion. We learn from the *Enterprise* that the mill contains fifteen stamps, twelve iron-bottomed amalgamating tubs, and three large "treating-tubs." The latter are to be placed near the batteries and will be used for mixing the chemicals used with the pulverised ores. The floor of the room containing the batteries and treating-tubs is several feet higher than the amalgamating room, thus greatly facilitating the distribution of the pulp throughout the building and saving much labor in the various departments.

The Company has a large amount of wood piled up near the mill, and will be enabled to "fire up" the moment their mill is completed. Many improvements are being made in the mine. A very rich vein has lately been struck in the lead, which consists of a species of brown, compact earth or decomposed rock, which is literally full of bright, glistening gold. This seam or streak, as far as opened, varies from two inches to a foot in width—the entire lead being about fifteen feet in width.

The eastern extension of this mine is known as the CANEY LEAD, and has been traced for a considerable distance. On the west extension is the GOVERNOR NYE CO., who are now cutting through what is supposed to be the wall-rock of the same lead into a reddish, decomposed earth which yields very fair prospects in gold.

We clip the following items from the Territorial *Enterprise*:—

**BUILDING LOTS.**—Hundreds of building lots have lately been staked off east of town by speculative peg-drivers.—We shouldn't wonder if there was money in those lots.—This city would not stop growing should it try. It's bound to go ahead, and must have some place to spread.

**BREVOORT'S MILLS.**—Col. Brevoort's new mill is rapidly advancing towards completion. A commodious gallery has lately been built, connecting it with the old mill.

**TRENCH'S MILL.**—Additional batteries are being erected at this mill, and there will be a considerable increase in its capacity for amalgamation.

**A NEW MILL.**—The foundation for a very large new mill, to be called the "Rhode Island," is being built on Gold Canon, a short distance below Gold Hill.

**THE NEW SUCCOR MILL.**—This on Gold Canon, near the Succor mine, is in full blast. It is a very little affair, and conveniently arranged.

**GOLD CANON REDUCTION WORKS.**—Some addition has lately been made to the amalgamating machinery of the Gold Canon Reduction Works. This consists in seven new five foot pans with Wakely, or rather improved Wakely, mullers. The new machinery was started yesterday morning.

**THE HOOSIER STATE MILL.**—This new mill works as smoothly and correctly as a well regulated watch, and is one of the neatest and most substantial institutions in the district. It is crushing the Gould & Curry rock at present.

**TAR SPRING.**—The Territorial *Enterprise* mentions the discovery of a tar spring—petroleum probably—which is located between Mud and Pyramid lakes. This spring emits a thick, bituminous fluid; the discharge being quite hot where it bubbles out of the earth. According to the *Enterprise*, the Indians frequent the tar spring for the purpose of pitching their baskets and willow water vessels.

**VIRGINIA CITY POTTERY.**—The Territorial *Enterprise* of the 31st ult. says:—"A kiln of fine glazed ware is ready for drawing at this establishment. The proprietors find no difficulty in disposing of their ware."

## The next Mining "Sensation."

Late Victoria papers, received at this city, are filled with glowing accounts of extraordinary gold yields from the placers of Fraser river, Cariboo, Similkameen, etc. The *Colonist* published in that city says that the late arrivals of gold from those places "puts to blush the croakers who have come here and left," and asserts in the very face of the ragged and starving thousands that are fleeing from those localities that "there will be good diggings there for the next ten or twenty years; and that it will take five years to get them opened." Still, as if doubting the possibility of again inducing a crowd of adventurers to visit and leave their money, if not their bones, in those same localities, that paper has the presumption to announce "new and important discoveries," still further north, beyond the Fraser and over the divide, along the waters of Peace river, which find their outlet in the Arctic Ocean! "There," says the *Colonist*, "we are met by a new El Dorado, where the miner can render muddy by his industry, waters that fall into the Arctic Ocean." Further on, in the same article, we find the following significant paragraph:—

"We really claim to have a greater extent of gold-bearing country than any other country in the world. [!] \* \* \* With our small population we are doing wonders in discovering it. [No doubt.] What we want from abroad are capitalists and capital, laborers willing to labor—to put up with the "blues" and hardships of a rugged country—rugged above the average. We want for next year, mules, pack-horses, freight-wagons, stage-coaches, steamboats, express-men, mail-carriers in all directions, coasters, seamen, and merchants. The more we get of these classes—not forgetting the farmer—the better. [No doubt of it.] Here is the field for speculation, enterprise. We assert it, we know it, are sure of it, have not a doubt about it, that our Pacific Territory is a rich one in gold." [!]

Other columns of the *Colonist* are filled with details of "rich strikes," and "extraordinary yields," from which the uninitiated might be led to suppose all one had to do was to go to the mines and scrape up gold by the handful! Who does not see in these paragraphs the most unmistakable evidence of the ground work of another mining "sensation" for the coming season?

Whatever may be the ultimate value of British Columbia as a mining region, certain it is that, notwithstanding the vast pretensions of the *Colonist*, and other journals in like interest, (some of which may be found in this state,) we have, as yet, no reliable evidence upon which to base the propriety of any extensive mining emigration to that quarter. Still as it seems to be a *sine qua non* with California, that she must have her periodical mining excitements, we trust, if such things are to be, the speculators will hereafter select for their field of operations, some locality within the confines of our own state, so that those who are bent upon going upon a fool's errand may be kept within easy reach of their friends, and be induced to spend their money for the benefit of their own countrymen.

It is now upwards of four years since a base and nefarious set of swindlers, made up of steamboat and ship owners, and land pirates of every specie and class that can thrive by such excitements have been annually enticing thousands upon thousands of miners from California, and people from other parts of the world to try their fortunes among the placers of British Columbia. After each year of failure they have been told that the new El Dorado was certainly to be found only a little farther beyond the point visited the previous year—that they were sure to strike it, if they persevered, and return, every one with a "pile," if they would "only go a little farther North or East this year!"

Each fall the roads from these regions have been thronged with these same thousands, returning from their explorations, disgusted and discouraged, and, in a majority of cases with nothing but rags to cover their nakedness and scarcely a dollar to provide that sustenance which is doled out to them by these same speculators, at enormous prices. Hundreds we are told, have put a violent end to their existence, or sat themselves down to die after their last possible effort to escape from this modern Golgotha. These are facts—not fancies—as may be almost daily brought to the knowledge of every person residing in any of the principal commercial or mining centres of the State, who will take the least pains to enquire into them. The present is no exception to the rule, but has been quite as disastrous as any season which preceded it. And yet the journal already alluded to, as

published in the chief city of that region, has the effrontery to jeer at the great array of sufferers hastening home from that inhospitable country, ere the rigors of a northern winter deprive them of the last hope of ever again reaching the bounds of civilization—it denounces them as 'croakers', etc.!

The press throughout this state has, year after year, given timely cautions against these delusions, and pointed to the well attested facts that such reports are all got up for speculative purposes, having, it may be, some few data from which to work; but showing that they were, in the main, baseless as the fabric of a dream. We trust that now, at least, the days of humbuggery and excitement, in this peculiar channel, at least, have gone by and that our miners will hereafter conclude to let well enough alone, and adhere to the good old adage that "a bird in the hand is worth two in the bush." Let them pay no farther attention to the oft repeated tale of rich and richer mines far and still farther north. Let them endeavor to settle down into the reasonable conclusion that the extraordinary stories of rich diggings now coming in from the distant Peace river mountains, are but repetitions of the "same old story," and resolve to settle down quietly, even if they do not earn more than \$2½ or \$3 per day, since, in the end, they will even at that, with economy and industry, amass a competence for old age.

**HENNESSY PASS ROAD.**—A new line of stages has recently been put on between Grass Valley and Virginia City, connecting with the California Co's coaches at the former place. The first trip over this road was made in 17 hours 40 minutes, traveling time. Travelers will find this decidedly the best route of travel to Virginia City. Arrangements have been made by the Stage Company and the people living along the route to keep the road open through the winter, and in good condition for teaming. This can easily be done, if entered upon with a will, and would be of vast benefit to both California and Nevada Territory.

**A WISE MOVE.**—The wine growers of Anaheim have joined in an association called the United Wine growers of Anaheim, the purpose of which is to establish a depot in San Francisco, where their wine can be obtained in abundance and purity.

**RECENT PATENTS.**—Granted to CALIFORNIA INVENTORS through the Pacific Agency, J. SIEVERS SMITH, Solicitor:

**E. E. MATTESON, Nevada:** *Hydraulic Derrick.* This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

**ELANDER HEATH, San Francisco,** *Spiral Spice and Sage Mill.* See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

**G. F. DEETKEN, formerly of Nevada:** *Apparatus for separating Gold from Pyrites.* This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

**THE GERMAN BAR LEDGE.**—This famous ledge which was taken up during the great excitement of 1851-2 and of the yield of which most astonishing reports were circulated, seems to have quite passed out of mind of late years, but has now been again brought before the public—as rich as ever. The Nevada Democrat gives the following in relation to it:—

**A RICH STRIKE.**—We learn that a rich quartz strike has lately been made in a ledge on the north side of the Middle Yuba near German Bar. The ledge is known as the "Copper Hill Lead," and is owned principally by Mr. George Fellows, who has been working it most of the time since 1851. It was taken up during the quartz excitement of that year by a party of miners, of which Mr. Fellows was one, and the company, fortunately striking a rich pocket, took out from \$150,000 to 160,000. Having worked out the pocket, it was found that the rock in other places would not pay, and the partners, one after another, sold out or threw up their interests and returned to the Eastern States. Mr. Fellows, however, stuck by the ledge, and has been working it more or less ever since. He erected a mill some years ago, known as the "German Bar Mill," which was carried off by the flood of last winter. The rock, however, hardly paid for the expense of working, but he continued on, in hopes of striking another pocket, and his perseverance has at length been rewarded.—The workmen came upon another rich place a month or six weeks ago, and have since been taking out gold by the wholesale. We cannot learn how much has been taken out, as Mr Fellows keeps these matters to himself. He went below at the State Fair with \$10,000, which had been taken out within a week or two previous; since then the lead has been getting richer, and up to the present time there are no indications of the pockets giving out. One gentleman, who visited the ledge a few days ago, and who has some means of judging, informs us they must have taken out nearly \$100,000 in the past month. Others place the amount at from \$50,000 to \$100,000.

**A NEW CITY.**—It appears from the subjoined letter from the Morning Call of Monday, that a new city has recently been laid out on the west bank of the San Joaquin, at the point of its confluence with the Sacramento. It seems that the site possesses advantages, which will doubtless soon become known. It has already arrived at sufficient importance to call for the stopping there of the Sacramento Steamers for way freight and passengers. We give the letter:—

COLLINGSVILLE, Oct. 25, 1862.

**EDITORS MORNING CALL:**—You will receive this from our new city at the mouth of the Sacramento and San Joaquin rivers twenty miles (about equal distances) from Suisun and Rio Vista, and opposite the towns of New York and Antioch. We have a fine wharf and store-house now built, and a good hotel. We are making a fine road from the wharf. Parties are about putting on a ferry boat to run to Antioch. The distance then will be only 35 miles to San Francisco, saving a distance of over one hundred miles, going by land and driving stock. A number of gentlemen from your city are now laying out our place in town lots, and we hope soon to have a post office, application having been made. The Sacramento steamers stop every other day—Saturday, Monday, Wednesday and Friday, going up; Tuesday, Thursday and Saturday, coming down. If you or any of your friends would like a few days' gunning, there is no other place in this State where game is so plenty. One of our gunners this week killed 164 geese in three shots. Our ponds are full of mallard and other ducks; our tules full of winter snipe and larks. X. Y. Z.

**PREVENTING INCRUSTATION OF STEAM-BOILERS.**—NOVEL APPLICATION OF PEAT.—The advantage of employing pure water in steam-boilers is too well known to require comment; and the processes by which it has been sought to remove impurities have been very numerous. Mr. John Cameron, of the Hematite Iron-works, Hindpool, now proposes an extremely simple method of causing vegetable acids to act upon the impurities which have usually to be contended with. He forms a tank with two divisions, that may hold from 50,000 to 60,000 gallons of water; one division being on a lower level than the other, so that the contents of the upper division may be emptied into the lower. The upper tank is filled with water, and about 30 tons of peat is added to each 25,000 gallons of water; the peat is put in part dry and part wet, and is occasionally stirred, that every part of the water may be acted upon. It is then left at rest, and the organic compounds (humic, ulmic, humic acid, ulmic acid, crenic acid, and apocrenic acid) existing in the peat precipitate the earthy matters contained. The purified water may then be drawn off into the lower tank, and the upper tank refilled.—*London Mining Journal.*

**BATTLES.**—During the Revolutionary war, there were fought thirty-six battles; during the war of 1812, eighteen; during the Mexican war, twelve; and in the present war, thus far, fifty-three.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA  
connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company at Aspinwall.

### FOR PANAMA,

The following Steamships will be dispatched in the month of 1862

1st—UNCLE SAM, Captain R. H. Horner.  
11—GOLDEN AGE, F. R. Baby, Commander.  
21st—SONORA, ————— Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York

For freight or passage, apply to

**FORBES & BABCOCK, Agents,**

Je4

Corner of Sacramento and Leidesdorff sts.

### RE-OPENING OF

## THE NICARAGUA ROUTE!

**People's Line,  
CONNECTING CALIFORNIA and NEW YORK.**

**700 Miles shorter than any other route!!**

**EXPECTED TO MAKE THE TRIP THROUGH  
WITHIN 21 DAYS.**

The fast and favorite *Double Engine Steamship*

**MOSES TAYLOR, 1,500 tons,**

**E. HOWES** ..... Commander.

Will be dispatched for

**SAN JUAN DEL SUR,**

From Mission street Wharf.

Punctually at 9 o'clock A. M., of

**MONDAY, ----- DECEMBER 1st.**

Connecting with the splendid Steamship

**AMERICA,**

2,000 Tons.....**JEFF. MAURY, Commander.**

**THE PEOPLE'S LINE**

Has been established on this

**Shortest, safest and Healthiest Route,**

To meet the universal demand for an

**OPPOSITION,**

And every Californian should give it a preference for the public good, as well as his own private advantage, which will be secured by

**Reduced Fare, Good Accommodations, and Quick Trips.**

This line is intended to be a permanency, and is not put on for the purpose of being bought or driven off. Speed, safety and the utmost comfort of passengers are the main objects. To secure these no merchandise freight (other than specie) will be taken. The **MOSES TAYLOR** is built with **Water-Tight Compartments**, and is unequalled for safety as well as speed.

For information or passage apply to

**ROSS, DEMISTER & CO., Agents,**  
425 and 427 Battery street.

### LABOR-SAVING

## Rock Drilling Machines.

**TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRY-**  
men. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

**HAND, HORSE, AND**

## STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A **FOUR-HORSE POWER MACHINE**, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to **WM. W. DUNN,**  
oc7-3m] Fremont street, bet. Market and Mission, San Francisco.

**F. G. BEPLER,**

## PRACTICAL COPPERSMITH,

**No. 118 (Old No. 22) Bush street,**

Between Sansome and Battery,

SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work.

All orders from the country promptly attended to.

Je8

## V. SQUARZA'S PUNCH FACTORY.

WE PRESENT HERewith THE PORTRAIT AND TRADE MARK OF the gentleman who heads this article. Mr. Squarza is favorably known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is an adept in the chemic-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser,
Arac do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Cocoa do.	Anti-Dyspepsia Bitters,
Coffee do.	—	Appetizer,
Tea do.	Morning Comfort,	Ladies' Tears.
Pineapple do.	Kuennel,	

And CHAMPAGNES of all brands.

## THE EYES! THE EYES!! THE EYES!!!

**DR. E. H. PARDEE,**

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

**JULIUS SILVERSMITH,**

## COMMISSIONER FOR NEVADA TERRITORY.

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery & Washington sts., Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

## FREDERICK KESMODEL, Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO.

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

**FREDERICK KESMODEL,**  
Inventor and Patentee.

ap3 1f

**W. T. & J. GARRATT,**

Manufacturers of "Garratt's Patent Improved Journal Metal."

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine.....3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine.7cts " "  
 " " 750-1000ths to 950-1000ths "14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts, " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

## READ THIS!

COAL OIL EXPLOSION.—ON SATURDAY EVENING, WHILE MR. BREWER was engaged in the Sumner street House in pouring coal oil from one can to another, his wife imprudently approached with a lighted candle and the oil exploded. Mrs. Brewster's arms were badly burned, as were also the husband's hands. However, he succeeded in mastering the flames, and preventing worse consequences.—[Evening Bulletin, Aug. 4.]

## THEN THIS!

## COMET ILLUMINATING OIL!

Manufactured expressly for Stanford Bros.

THIS POPULAR

## BRAND of KEROSENE

Is warranted free from Camphene, Petroleum, or any other explosive material, and is the

Best Family Oil in the Market

STANFORD BROTHERS,

au14

Nos. 121, 123 and 125 California street.

## 50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE.—Mix three parts Mineral Paint with one part white lead, thin with Linsseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF.—Five parts of Mineral Paint, one part white lead; mix with Linsseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. FORTUNE, Superintendent.

WORKS, North Beach; Office, 318 California st.,  
 SAN FRANCISCO

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 611 Market street,  
 Opposite Battery, San Francisco.

Old Stand, corner of Bush and Market Streets.  
 Opposite Oriental Hotel, San Francisco, Cal.

LEWIS COFFEY

J. N. RISDON

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

A Circular containing further information, and a synopsis of the Patent Laws of various countries, will be furnished on application to J. Silversmith, Government House, San Francisco.

Miners, Inventors, Agriculturalists, Capitalist and Mechanics, will find it to their advantage to subscribe for the MINING AND SCIENTIFIC PRESS—being the only journal of that class published upon this continent. Issued every Saturday at four dollars per annum.

Address, J. SILVERSMITH,  
 SAN FRANCISCO.

## MUSIC! MUSIC!! MUSIC!!!

A. KOKLER,

IMPORTER OF EVERY DESCRIPTION OF

Musical Instruments and Musical Merchandise.

Sheet Music and Music Books.

GENUINE ROMAN STRINGS, &c., &c., &c.

Lighte's New Patent Insulated Iron Frame is put into all of  
 Lighte & Bradbury's OVERSTRUNG PIANOS.

Wherever these instruments are known they

RANK AS THE FIRST AND BEST

In tone, delicacy of touch and durability.

All the leading Musicians of the country have testified to their superiority.

A. KOHLER, Agent for the Pacific Coast.

Melodeons and Harmoniums,  
 FROM THE CELEBRATED MANUFACTORY OF

MASON & HAMLIN.

Warranted superior to all others.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can commend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

We subscribe ourselves yours,

Rev W Stanton, L.L.D.,  
 Richard A Vaux,  
 Dr Straud, M.D.,  
 Dr Loomis, M.D.,  
 Cleopole Stevens, M.D.,  
 Samuel Fancett, M.D.,  
 Walter C Foster, M.D.,

S W Howard, Att'y at Law,  
 Pierce Butler,  
 Henry B Linton, M.D.,  
 Wm L Howard, M.D.,  
 Philippe Lidy, M.D.,  
 Myers Davis, M.D.,  
 W M Thompson, M.D. and others.

No. 718 Catharine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skillful surgeon.

MRS. J. W. HAMMOND.

From Dr. W. L. Stevens: Dr. Kennedy has operated upon my feet, and has effectually cured me of some torturing pests that I have been annoyed with for years.

From the Rev. Walter M. Thompson: This is to certify that while sojourning in Philadelphia, Dr. Kennedy has operated on three of my family to my entire satisfaction.

From the Hon. Wm. M. Thorn, ex-member of the Ohio Legislature: This is to certify that I called on Dr. Kennedy to operate on my feet: He displayed great skill as a surgeon, and I am satisfied that he has effectually cured me of those torturing pests which have annoyed me for many years.

From Geo. F. Omerly, 637 Arch street: This is to certify that I called on Dr. Kennedy. He has operated on my feet to my entire satisfaction. au21

# Mining and Scientific Press.

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI. SAN FRANCISCO, SATURDAY, NOVEMBER 29, 1862. NO. 5.

MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR: VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

## The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

## The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

## The Mechanic and Manufacturer!

Will be greatly benefitted by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

## To Chemists, Architects, Millwrights and Farmers!

This Journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

## Terms.

### Club Rates.

Five Copies for Six Months, \$8.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

## W. B. EWER, Publisher,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

## ARTS & SCIENCES

## SCIENTIFIC CORRESPONDENCE.

The following ably written article is taken from the *Washington Times*. T. B. Truckee is evidently well versed in geology and metallurgy, hence his interesting recital:

MR. EDITOR—Dear Sir: Will you kindly admit a few remarks upon the subject of minerals and metals, into your valuable journal, which may not be unacceptable to your numerous readers?

The greatest matter of importance to this Territory, is the mineral wealth which lies buried in all its mountains, and the vast varieties in which it is found. It may be safely stated that this country possesses, in large measures, all the valuable known minerals; and, in a few years, this will become one of the most, if not the most, important region of the commercial world.

The question, in fact, is not, With what mineral does this country abound? but, really, What are the minerals which are not found in the vast mountains which form the eastern escarpment of the Sierra Nevada?

We find gold, silver, copper, iron, zinc, mercury, antimony, bismuth, lead, arsenic, platinum, cobalt, coal, &c., in every variety of matrices; all of which will, in due course of time, be developed and worked. Tin ore may be said to be the only valuable mineral not yet found, but it may, nevertheless, be present as black tin, near some of the lodes where copper has been obtained; although most of the copper ores, yet discovered, are associated with gold and silver.

The metal to which the attention of the present population of this country is mostly directed is silver; and the many and varied forms in which this mineral is to be found, and the great variety of its associates is a matter of vast importance to the commercial community of this part of the new world.

The mineral of silver has no less than twenty-six known varieties, viz: 1st, Native massive silver; 2nd native needle silver; 3d, auriferous native silver; 4th, antimonial silver; 5th, arsenical-antimonial silver; 6th, telluric silver; 7th, sulphuret of silver; 8th, black sulphuret of silver; 9th, flexible sulphuret of silver; 10th and 11th, dark and light red silver blend; 12th compact silver glance, or vitrious silver; 13th, earthy silver glance; 14th, rhomboidal silver glance; 15th, white silver; 16th, gray carbonate of silver; 17th, bismuthic silver; 18th, malzprite; 19th, stromeyerite; 20th, seleniuret of silver; 21st, eukarite; 22d, iodide of silver; 23d, carbonite of silver; 24th muriate of silver; 25th, chloride of silver, and 26th, butter-milk silver.

These varieties have their respective associated minerals, which may be placed as follows: Alumina, antimony, arsenic, barytes, calcium, cinnabar, cobalt, copper, gold, iron lead, mica, selenium, silica, sulphur, and tellurium.

Most of the silver ores of this country are very strongly impregnated with sulphur and arsenic, which substances render the obtaining the precious metal both difficult and precarious.

It has been the study of some years to endeavor to form some general principle by which the ores of the precious metals could be worked; but to the present time it has proved wholly impracticable, as the features of every new mine differ, in some respect, from its neighboring deposit; and, therefore, little quack medicines, which are said to cure

all disorders, and are found to be failures in most, so in this instance, except the matrix be treated according to its constitution, a good and perfect result cannot be obtained. In order to procure the finer and more precious metals, it requires that the impure qualities of the matrix should be either neutralized or expelled; and, in fact, the material treated according to its analyzed constitution, without which it is quite impossible but that a very serious loss must always take place. This is tacitly acknowledged in all the works for the reduction of ores of this country, by the fact that every mill reserves its tailings for some future working.

It would occupy too much of your valuable space to, at present, enter further into this subject, but I will, with your polite permission, do so on some future occasion.

I am, Dear Sir,

Yours, faithfully, J. B. TRUCKEE.

MAKING ICE BY MACHINERY.—The following is an account given in the *World* of a patent improved ice-making machine, manufactured by D. Siebe, Lambeth, London. This machine is in actual use in India and Peru, where it produces ice at the rate at from two and a half to six dollars per ton.—The principle upon which the machine is constructed is an application of the well-known natural law, that by evaporating fluids the caloric contained therein passes off with the vapor, thereby reducing the temperature of the evaporating body. In this process a volatile fluid steam is used as an evaporating agent; a powerful pump forms a vacuum, and in its efforts to do so assists the evaporation at a low temperature on the one hand, and by pressure, with the assistance of water at an ordinary temperature, reduces the vapor again to fluid on the other hand, thereby using and re-using the same volatile fluid without loss. No chemicals of any kind are used, unless ether, benzola, &c., are chemicals. To talk about making ice in the United States may at first sight seem absurd. I am not so sure that it is so in all localities and under every condition of things. But there is a purpose to which this ice-making machinery is applied which may be deserving of attention in the United States.—It is proposed to cool hospitals by this machinery on the converse principle by which buildings are warmed. It has been proved by experiment that this is practicable, the inside temperature of a chamber having been reduced to within six degrees of the freezing point, while the thermometer outside ranged at 90° Fahrenheit. In the progress of the war something of this sort may be very desirable. The machinery for making a ton of ice at a time might be carried on a large wagon.

IRON FORMED BY ANIMALCULES.—The *Journal de l'Instruction Publique* contains a curious article by M. Oscar de Watterville, in which he announces the fact, not generally known, that in the lakes of Sweden there are vast layers or banks of iron, exclusively built by animalcules, not unlike those that have laid the foundations of large islands in the ocean, by silently and for ages cementing matter with matter, so as to create those beautiful forms known as madre-pore, mille-pore, corals, &c. The iron thus found is called in Sweden "lake ore," distinguished, according to its form, into gunpowder, pearl, money, or cake ore. These iron banks are from 10 to 200 metres in length, from 5 to 15 broad, and from a fourth to three-fourths of a metre and more in thickness. In winter the Swedish peasant, who has but little to do in that season, makes holes in the ice of a lake, and with a long pole probes the bottom, until he has found an iron bank. An iron sieve is then let down, and with a sort of ladle, conveniently fashioned for the purpose, the loose ore is shoveled into the sieve, which is then hoisted up again. The ore thus extracted is of course mixed with a quantity of sand and other extraneous matter, which is got rid of by washing it in a cradle like that used by gold diggers. A man may get out a ton of iron ore a day by this process.

## IVORY.

The immense demand for elephants' teeth has of late years increased its supply from all parts of Africa. At the end of the last century the annual average importation into England was only 192,600 lbs.; in 1827 it reached 364,784 lbs., or 6,080 tusks, which would require the death of at least 3,040 male elephants. It is probable that the slaughter is much greater, for the teeth of the female elephants are very small, and Burchell tells us, in his African travels, that he met with some elephant hunters who had shot twelve huge fellows, which, however, altogether produced no more than two hundred pounds of ivory. To produce 1,000,000 lbs. of ivory, the present annual English import, we should require (estimating each tusk at 60 lbs.) the life of 8,333 male elephants. It is said that 4,000 tuskers suffer death every year to supply the United States with combs, knife-handles, billiard balls, etc.

A tusk weighing 70 lbs. and upward is considered by dealers as first-class. Cuvier formed a table of the most remarkable tusks of which any account had been given. The largest on record was one which was sold at Amsterdam, which weighed three hundred and fifty pounds; in the late sales in London the largest of the "Bombay and Zanzibar" was 122 lbs.; of "Angola and Lisbon" 69 lbs.; of "Cape of Good Hope and Natal" 106 lbs.; of "Cape Coast Castle, Lagos," etc., 114 lbs.; of "Gaboon" 91 lbs.; "Egyptian" 114.—But it must not be inferred from this that large tusks are now rare. On the contrary, it is probable that more long and heavy teeth are now brought to market than in any previous century. A short time ago Julius Pratt & Co. cut up at their establishment at Meriden, Ct., a tusk that was nine and a half feet long, eight inches in diameter, and which weighed nearly eight hundred lbs. The same firm in 1851 sent to the "World's Fair," London, the widest, finest, and largest piece of ivory ever sawed out. By wonderful machinery, invented in their own factory, they sawed out (and the process of sawing did the work of polishing at the same time,) a strip of ivory forty-one feet long and twelve inches wide. It took the precedence of all the specimens sent in by England, France, or Germany, and received rewarding attention from the Commission.

It may be asked what can be done with such an immense piece of ivory? We reply that the time has come when this beautiful material can be used for purposes of veneering, and we shall soon doubtless see tables, bureaux, writing-desks, and other members of the furniture family rendered as resplendent as the throne of Solomon. We believe that it is now contemplated by Steinway & Sons to build a piano whose keys shall not be the only portion from the teeth of the African elephant, but an instrument whose whole surface shall be of burnished virgin ivory. One thing is certain, that any piano-forte manufacturer who should first attempt this will make a sensation by the novelty of the affair, and will doubtless be well rewarded for his labor.

The most costly tusks, or portions of the tusks, are those which are used for billiard balls. What are termed "cut points" of just the right size for billiard-balls, from  $2\frac{3}{8}$  to  $3\frac{1}{8}$  inches in diameter, brought the highest price (£53) per cut of any ivory offered in the London market at the late sales. Billiard-ball making has of late become a very important item of manufacture in this country.

The teeth from the West coast, with the exception of "Gaboon," are less elastic, and less capable of bleaching, than those that come from other portions of Africa. The West coast tusks are much used for knife-handles. Since the French have possessed Algeria, France receives a considerable portion of ivory from Central Africa by the large caravans that travel from Timbuctoo northward.

Ivory is also furnished by the walrus or sea-horse, and commands a price equal to the best qualities of elephant ivory. It is, however, too hard and non-elastic for many purposes, and has the disadvantage of being too small to cut up profitably.

**SILK FOR THE MILLION.**—Some very encouraging experiments in the culture of a new kind of silk, called ailanthe, have been made in France under the patronage of the Emperor. The worm is an importation from China, where its silk is in common use among the people for every day wear. The food of the worm is the leaves of the ailanthe, a hardy tree that flourishes equally well in the temperate or torrid zone, and grows on soil worth little for any other purpose. The silk is not so fine nor glossy as that produced by the mulberry worm, but it is strong and easily produced, takes most dyes well, and is emphatically a silk for the people. Thus far the silk derived from the ailanthe worms has been what is known as corded silk—a material in great demand among manufacturers—but specimens of Chinese manufacture show that they must possess some method of reeling off the cocoons. Says an English paper, in speaking of this new kind of silk, "To Henry IV. the country owes the silk of the rich; to Napoleon III., courteous history will record, she owes the silk of the people. In 1599, a great king wished to patronize the introduction of a silk-worm, but a great minister, Sully, was hostile to the enterprise; at the present epoch it is again a great sovereign who patronizes the introduction of a new silkworm, but it is impossible that a minister could now be found who would repeat the error committed by Sully."

**EFFECT OF THE AMERICAN WAR UPON ENGLAND.**—The loss which England already sustains by the blockade of the secession ports can hardly be stated at less than a quarter of a million per week, including the cessation of employment and wages for the operatives, and the waste and loss of interest on capital sustained by the employers, in the staple manufacture of Lancashire. The localization of the interrupted industry adds terrible weight to the severity of the blow.

Two hundred thousand hands suddenly thrown out of work, in a population of twenty millions, might easily be fed and kept from severe suffering by the care and assistance of their immediate neighbors. But that number deprived of their means of subsistence, in the midst of a population of some two millions, all impoverished by the same calamity, and most of them actually dependent on the wages of those who are now unemployed, are in danger of actual starvation.

Some idea of the state of affairs in the manufacturing districts may be obtained from the report of a deputation sent from Birmingham into the cotton districts to make inquiries. In Manchester, the subscriptions to the general fund amount to £25,000, and £10,000 has been given to the Provident Society; while Liverpool, which merely imports cotton, and where only 1,000 or 2,000 cotton porters are dependent for a living by removing it from the ships into the warehouses, has already contributed £32,000. Exceptional cases are, however, mentioned by the Birmingham deputation. A large mill owner is stated to have lent his work-people £3,000 to "tide over the evil hour;" and another has spent £1,000 in unproductive labor. The Birmingham deputation calculate that the diminution of wages in the distressed districts during the coming winter months will be at least £150,000 a week, and the same authorities state that, when the distress has reached its height, it will require advances at the rate of £100,000 (500,000) a week to keep the population from starving.

**COPPERING THEM.**—The Monitors, now in course of construction, have one weak point, notwithstanding the universal faith in their invulnerability. Water will do that which hostile shot cannot—it will slowly but surely eat its way through the iron plates which compose the hull so as to fatally weaken or destroy them ultimately. A method of copper coating these plates has been devised, however, which seems to afford effectual protection from corrosion. Copper is fused and heated to 1,000 degrees, when the iron plates which are to be coated are plunged into it and kept there until they are nearly at a white heat. Then partial fusion between the two metals takes place, and the plates when withdrawn are found to be much more effectually coated than is possible by the galvanic process which has hitherto been employed.

**A POWERFUL RAM.**—The rebel ram, Fingal, building at Savannah, will soon be completed, and when her iron-plating is finished she will be fully equal in point of strength to the Merrimack. She was an English iron steamer, and ran the blockade early last spring, and on this account is much stronger than ordinary vessels, being iron-braced in every part. She was built in Greenock, in England. The rebels have cut this vessel down, razeing her some eight feet, and widening her by the introduction of eight feet of white oak on either side, bolted on, and the iron plating is bolted and riveted to this. The whole vessel is roofed over with iron, on the same principle as that evident in the construction of the Merrimack. She is provided with eight hundred horsepower, double oscillating engines, and will be a troublesome customer, if she is ever allowed to get out from Savannah.

**WHAT IRON-CLAD SHIPS HAVE DONE.**—The Liverpool Post says:—In a short time, the war continuing, America will have the largest and most effective navy in the world. The Government at Washington does not yet feel quite secure against the chance of European interference. Possibly the alarm of intervention is encouraged to sustain the military ardor of the nation under present circumstances; for it is difficult to suppose that any sane man could believe for a moment that England would interfere in the present quarrel otherwise than in a friendly spirit. Hereafter there can be no war between an European Power and the United States. Iron-clad steamers torrid it.

**NEW MODE OF CATCHING TROUT.**—Levi Bartlett describes in the *Country Gentleman* some trout ponds on the farm of Colonel Tappan, of Bradford, N. H., and speaks also of the mode of feeding. Last winter, after the ponds had frozen over, he states that a boy was sent to feed the trout with chopped meat. Having cut a hole through the ice and put in the meat, the boy lay down with his face near the water to watch the fish, when a trout grabbed him by the nose, and the boy by a sudden jerk of the head, threw the fish upon the ice. He thus obtained a trout of three-fourths of a pound weight, but at the expense of a sore nose for three weeks.

According to Simon's analysis, healthy blood contains in 1000 parts—

Of water.....	797.707
Fat.....	2.346
Fibrin.....	2.104
Albumen.....	76.600
Globulin.....	103.022
Hematin.....	6.209
Extractive matter and salts.....	12.012

**SOURS OF ACIDS.**—The sourness of the juice of a lemon and the acidity of vinegar are so well known that the mere mention of them is sufficient to convey a knowledge of the chief qualities of sours or acids in their natural state. There are so many acids that two or three pages of an index to a chemical book are taken up in enumerating them. Every fruit contains an acid; nearly all the minerals are capable of forming acids. When coal, wood, paper, rag, charcoal, brimstone, phosphorous, and many other substances are burned acids are produced. A flint stone is an acid. There is an acid in our window glass, and in many of the most costly precious stones. The air we breathe contains an acid. We create an acid in the lungs by the act of breathing.—By a very slight change sugar can be converted into oxalic acid, which is a strong poison. Sugar by another change, is converted into vinegar. These two illustrations show that a sweet can be converted into a sour; but when sour fruit becomes sweet it proves almost to demonstration that a sour can become a sweet acid.

The most powerful acid is that derived from burning sulphur—it is called sulphuric acid, and is one of the most important articles of manufacture. Its acidity is so great that a tea-spoonful is sufficient to make a painful of water quite sour. Nitric acid obtained from niter, or saltpetre, is of the next importance in the arts; it is so corrosive that it has long been distinguished by the name of *aqua fortis*, that is, strong water—strong, sure enough for a nodule of iron, lead or silver, dissolves in it like sugar placed in water. From the number of acids which we find in nature, and the tendency of many artificial substances to become sour, it is evident that acids and sours are essential to our life and well being. Acids assume all forms and colors; some are liquids, some gaseous, others solid. The acids of fruits when separated from the grosser particles that accompany them, are very beautiful and crystallizable substances. By the ingenuity of the chemist the sour or unripe apples, grapes, tamarinds, lemons, &c., may be crystallized into beautiful snow-white bodies, which, however, when touched by the tongue, at once indicate their origin by their flavor.

**THE NEW METAL THALLIUM.**—This new metal, which was discovered by William Crooks, of London, has lately been described by the discoverer in the *Chemical News*, and preparations of it have been placed in the Great Exhibition.—Thallium, in most of its physical properties, resembles lead. It is not so white as silver, but when freshly cut, it presents a brilliant metallic luster. It is soft, malleable and easily cut with a knife, and it marks paper when rubbed upon it, leaving a yellowish streak. It has a great tendency to crystallize, and ingots of it crackle like those of tin when bent. To flame it communicates a deep green color; and in the spectrum, according to the researches of M. M. Bunson and Kirchhoff, its single green ray is as sharply defined as the yellow ray of sodium. Thallium rapidly tarnishes in the open air, and it becomes covered with a thin pellicle of oxide which, like the oxide of tin, preserves the rest of the metal from oxidation. Its oxide is soluble, alkaline in its nature, and it has a taste and smell similar to potash. Sulphuric and nitric acids dissolve it under heat, and it burns in chlorine gas heated to 200°. It exists in many of the pyrites that are used in the manufacture of sulphuric acid.

Three inventions have appeared lately that will, perhaps, ultimately revolutionize those branches of industry they are designed to effect. One is an engraving machine, which produces on steel designs from surfaces, either flat or in relief, with marvelous fidelity. The second is a spiral trowel, which, when attached to a plowshare, cuts a round hole, so that, in a few hours, a permanent drain is formed—the processes of plowing and draining going on simultaneously. The third is a trifle, but a useful trifle. It is a match which cannot be ignited by any species of friction, nor by fire itself, but only by being rubbed against the box prepared for its reception, which is coated with the flame-giving property.

**MANUFACTURE OF SHOT.**—The Dubuque shot tower having been purchased and closed up by a St. Louis house, in order to remove its competition, the citizens of Dubuque became indignant, and commenced experimenting to make shot by dropping metal down the deserted lead mine shafts, and with the most satisfactory results. They are now going into the business quite strongly, having decided that there is no necessity for building fifteen thousand dollar towers, when a hole in the ground, with an expenditure of \$500, will do as well.

**TWO WAYS OF FISHING.**—Rev. Dr. Bellows says that when men go a fishing for trout they take a light, tapering pole, with a fine silken line attached, and a sharp hook with a sweet morsel of worm on the end. They noiselessly drop the line on the water and let it float to the fish, which nibbles, and by a slight twitch is landed safely on the bank.—But when men go fishing for souls, they tie a cable to a stick of timber, and an anchor is the hook. On this a great chunk of bait is stuck, and with this ponderous machine grasped in both hands, they walk up and down thrashing the water, and bellowing at the top of their voice—"Bite, or be damned."

The purest metal is produced from the hottest furnace, and the brightest thunder bolt from the darkest storm.

## TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Title of Company and names of officers for the year.	Am't of stock & value per share.	When incorporated

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.

## Routes and Fares from San Francisco to Foreign and Domestic cities.

**Pacific Mail Steamship Company**—Steamers leave for New York *via* Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

**Nicaragua Steamship line**, Ross, Dempster & Co., agents. —Steamers leave for New York *via* isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

## PALMER, HANSCOMB &amp; CO.,

**Golden State Foundry and Machine Works,**  
First Street, near Market, San Francisco, Cal.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast. San Francisco, November 29, 1862 3m

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 ACRES, HAS RECENTLY been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to  
HARVEY S. BROWN,  
No. 19 Naglee's Building.  
Lithographic Maps can be seen and had at the above named office,  
no 13 6mo

## DEETKEN'S

**Chemical and Metallurgical Works,**  
ON SAN BRUNO ROAD, ISLAIS CREEK,  
SAN FRANCISCO.

CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON. ALL THE GOLD EXTRACTED by Chemical process. Yield of Sulphurets from 30 to 50 per cent higher than the BEST AMALGAMATION PROCESS. Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov8-3m

## JULIUS SILVERSMITH,

## COMMISSIONER FOR NEVADA TERRITORY.

OFFICE, IN LATE STATE CAPITOL,  
Corner of Battery & Washington sts., Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

LEANDER RANSOM,  
CIVIL ENGINEER  
AND SURVEYOR.

Having been connected with the public works of the State of Ohio for 20 years, and the public works of the State of California for 7 years.

## ALSO, STATE LOCATING AGENT.

And as such having the sale of  
600,000 ACRES OF THE STATE SCHOOL LANDS,  
At the low price of \$1.25 per Acre.

Terms—Twenty-five per cent. in cash, and the balance on a credit of several years.

OFFICE: Second floor of Express Building, N. E. corner of Montgomery and California streets. oct 3m

AGENCY FOR PATENTS.—The undersigned having been long established in the Patent Agency business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Caveats and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETHERED & TIFFANY,  
Office, 410 Montgomery street.

CHARLES R. BOND, (Late City and County Assessor.)  
REAL ESTATE AGENT,  
410 Montgomery street, San Francisco.

REAL ESTATE PURCHASED AND SOLD, LOANS NEGOTIATED

**Washoe Stock Exchange,**  
N. E. cor. Montgomery and Merchant sts.,  
SAN FRANCISCO.

L. W. NEWELL & CO.,  
Buy and sell Washoe, Emeralds and other Mining Stocks and Securities.  
sep20

THEODOR KALLENBERG,  
MAKER OF MODELS  
for Inventors,

MACHINES, MATHEMATICAL, Optical and Philosophical Instruments  
Scales, Weights, etc.; Steel Stamps, Dies and Die Sinking, Embossing Stamps.  
Repairing of Machinery promptly attended to. au7 3m  
(No. 4 Sansome street, corner Market, San Francisco.)

DEVOE & CO.'S  
STEAM ENGINE  
—AND—  
MACHINE WORKS,  
Corner Market & Fremont streets, San Francisco.

ALL KINDS OF MACHINERY, SUCH AS STEAM ENGINES, SAW MILL  
Iron, Flour Mills, Quartz Mills, etc., etc., made to order and repaired.

ALSO,

BLACKSMITHING, TURNING, FINISHING, PLANING, AND SCREW-BOLT  
Cutting  
AGRICULTURAL MACHINERY of all kinds made and repaired.

Duplicate parts of **Thrashing and Reaping Machines** and  
Thrashing Teeth made to order, on the most reasonable terms.

Steam Engines and Boilers constantly on hand, and for sale  
cheap. Screw-Cutting Turning Lathes for sale. DEVOE & CO.  
jul8

LATEST IMPROVEMENT  
In LADIES' BUCKLES.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS  
State, as well as to Jewelers and dealers in Jewelry, that he has made  
important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or  
address, FREDERIK REICHEL,  
Manufacturing Jeweler,  
620 Merchant street, San Francisco.

THE  
NEW ENGLAND SEWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Gauge and hemmer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.  
STEWART & SHEAR, General Agents,  
No. 60 Second street.  
sep11

WILLIAM FELL, Notary Public for Storey County, N. T. Commissioner of  
Deeds for California Virginia City, N. T. my23

THE FOLLOWING GOODS TO BE FOUND AT  
H. D. PEARCE'S:

Gents' Heavy Gold Cases, different patterns;  
Ladies' Heavy Gold Cases, do do;  
Gold Telescopic Pen and Pencil Case;  
Extension Screw, Heavy Silver, for Gents;  
Extension Screw, Heavy Silver, for Ladies;  
Silver Extension Cases;  
Silver Telescopic Cases;  
Screw, Silver and Ebony Desk Holders;  
Slide Silver and Ebony Desk Holders;  
Reverse Silver and Ebony Desk Holders;  
Pen Holders, Silver and Ebony;  
Pen Holders, Gold and Ebony  
Pen Holders, Gold and Ivory;  
India Rubber Propelling Pen and Pencil Cases;  
India Rubber Propelling Pencils, short.

All the above goods are made to order and warranted; will be sold cheap for cash. There are some thirty different patterns, leaving an opportunity for parties to select and be suited.

A cheaper class of Pens direct from New York, at wholesale only.

Gold Pens constantly on hand. Gold Pens repaired.  
H. D. PEARCE,  
606 Montgomery street, between Clay and Merchant, up stairs.

GREAT REDUCTION  
IN PRICES.

**STANFORD BROTHERS,**  
121, 123 and 125 California Street,  
KEEP THE LARGEST STOCK OF ALL KINDS  
OF  
Lamp Stock,  
And will Sell Cheaper than any House in this State.

LAMPS,  
CHIMNEYS.  
WICKS,  
CAMPHENE,  
BURNING FLUID,  
ALCOHOL,  
TURPENTINE,  
COAL OIL,  
KEROSENE OIL  
COMET ILLUMINATING OIL.  
SPERM OIL,  
LARD OIL,  
MACHINERY OIL,  
RAPE SEED OIL,  
CHINA NUT OIL  
LINSEED OIL, Raw and Boiled,  
POLAR OIL,  
SHARK'S OIL,  
NEATSFOOT OIL,  
TANNER'S OIL,  
&c., &c., &c.

Our customers in particular, and the country trade generally, are requested to ascertain our prices before purchasing from traveling agents, as we will sell at less rates than they can afford to. ap1861

**PHILADELPHIA BREWERY,**  
Second street, corner of Folsom, SAN FRANCISCO, CAL.  
Hölscher, & Wieland Proprietors.

Thankful for past patronage to a discriminating public, we beg leave to apprise at the same moment our many friends and patrons that the above well known Brewery has been permanently located in our new premises, on Second street—the former residence of Capt. Folsom where we shall endeavor to continue in furnishing our numerous patrons with the best article of "Beer." We shall strive to perpetuate the good reputation for promptitude and the faithful execution of orders as heretofore, and thereby increase our custom. Nov9.

## FULTON FOUNDRY AND IRON WORKS.

**HINCKLEY & CO.,**  
MANUFACTURERS OF STEAM ENGINES,  
Quartz, Flour and Saw Mills; Cast Iron Fronts for Buildings,  
Mining Pumps, and all kinds of Machinery,  
Amalgamators, Etc., Etc.  
47 & 49 First Street,  
BET. MARKET AND MISSION, SAN FRANCISCO

ALL kinds of Iron and Brass Castings furnished at short notice. Every style of finishing to Iron when cast. Repairing to Machinery neatly done. Pattern Making in its various forms.

D. B. HINCKLEY WM. E. WORTH. WM A. FIELD

## SQUARZA'S PUNCH.

## HOME MANUFACTORY,

WHOLESALE AND RETAIL.  
No. 44 Leidesdorff street, near Sacramento st.  
Branch at 406 Montgomery street. my30

A. S. ROSENBAUM & CO.—Importers of pure Havana Cigars, Tobacco, etc., corner Clay and Battery, 26 and 27 Cedar street, New York.

## Mining and Scientific Press.

W. B. EWER, Editor.

SATURDAY..... NOVEMBER 29, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plans or Colored Printing.

JOB WORK.—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## Incorporated Mining Companies.

The furor for incorporating Mining Companies under the Laws of the State of California, seems to be on the increase, and not a day passes that some Company with a nominal Capital, ranging from \$100,000 to \$500,000, is not incorporated, by some of our Courts. Although liable to abuse, this is undoubtedly the best method of working and managing the financial affairs of a Mining Company, as it facilitates business, enables parties interested to buy and sell, or borrow upon their interest in the mine, and in various other ways brings undoubted benefits with it. The *'modus operandi'* is simple and as follows: All the parties interested in a Ledge or Claim, being desirous of forming a Joint Stock Company, meet and adopt a name and a code of By Laws for the new Company. They then prepare in due form a Certificate of Incorporation, which sets forth the intention of the parties, and the names of the Trustees of the company, this, being signed and acknowledged, is filed with the Clerk of a Court of competent Jurisdiction, and a certified copy sent to the office of the Secretary of State, after which a trust deed of all the right, title and interest of each of the parties owning in the mine is signed, acknowledged and recorded, conveying to the Company all their interests in the mine. The proper officers are then elected, the books opened and stock issued. Then the Institution is fairly afloat, on the tide, either to become a permanent, paying fixture, or to subside and die suddenly out.

For the facilitating of business, the collection of assessments, and the general system of conducting the affairs of a Company—there is nothing like an Incorporation. But the great trouble with it appears to be, that the miners of Nevada Territory (where the principal Incorporations have been effected) have conceived the erroneous idea, that the simple form of issuing stock must necessarily give value to the mine it represents—losing sight of the fact, that stock of any kind which does not pay dividends, is substantially valueless.

The mines of Washoe have now been open long enough for them to commence paying their owners, and with proper management, there is not a developed mine in the Territory that could not be made to pay dividends, which, however small, would serve to renew the confidence which is now beginning to wane in Incorporated Mining Companies.

CANADIAN PETROLEUM—ITS ORIGIN.—The Canadian *Journal of Art* asserts that Canadian petroleum is not derived from coal, nor is it of recent origin. It says:—

Petroleum was formed long before coal, and is the result of the decomposition, under pressure of an infinite number of oil-yielding animals which swarmed in the seas of the Devonian period, long anterior to the coal. The decomposition of marine plants may have given some oil to the rocks of Canada and the United States, which are saturated with this curious substance. The shale beds of Collingwood furnish an answer to those who object to the infinite number of animals it would require to produce the oil locked up in the earth. Those shale beds are composed altogether of the remains of Trilobites—they extend from Lake Huron to Lake Ontario, and far west and east of these lakes. The oil-bearing rocks of Canada were once a vast coral reef, extending from the Gulf of Mexico to Lake Superior. There is the best ground for belief that the supply of oil will last for a long period, and that new discoveries will be made in different localities.

ANOTHER ASTEROID was discovered by Henry M. Parkhurst, at New York, on Sept 25. It is in the constellation *Pisces*, and is of the eleventh magnitude.

## MONEY NOT WEALTH.

A correspondent has furnished a communication controverting the leading article in the "Scientific American" of November 8th, which appears under the title of "The Gold Mines of California of No Value to the World." Our correspondent characterises the article in the *American* as "ridiculous reasoning." If our friend will carefully re-examine the same he will find that the only proper application of his term to the article in question, is to the impropriety of its heading. Of course, the proposition that "The Gold Mines of California" are of "No Value to the World," is ridiculous in the extreme. But the *American*, after announcing the above proposition, immediately loses sight of it and proceeds to discuss the very different proposition that "Gold-Mining, provided the metal is used for coin, adds nothing to the wealth of mankind." This latter proposition, we apprehend, our correspondent will admit is correct, and incontrovertible. Gold, when "used for coin" may be a valuable auxiliary in the transaction of business, as a representative of wealth—but no amount of gold, manufactured into coin, can add as much to the value of the wealth of the world as a simple plow made of iron. The following which we quote from the *American* is correct reasoning, in the main:—

If a man owns a steam engine worth ten thousand dollars, the engine forms this portion of the wealth of the world.—And if the man devotes his surplus labor, besides that which is necessary to procure a living, or expends his surplus profits in constructing a second engine of equal efficiency and value, he adds another ten thousand dollars to the wealth of the world. But if he expends the same amount of surplus labor or profits in simply adding to the weight of his engine, without increasing its efficiency or usefulness in any respect, he does not by the operation augment the wealth of himself, of the community or of mankind. In complex states of society, the innumerable exchanges of property which people mutually desire to make, are effected through the medium of money. The article which first came into use as money were the more valuable metals. As civilization advanced, and the organization of society became more complex, certain individuals and associations exchanged their notes, promising to pay either gold or silver or platinum on the presentation of the note, and these notes also came into use as money, being received by persons in exchange for articles of value on the faith that the stated quantity of valuable metal could be obtained for them at any time. The money in circulation in this country amounts to about two per cent of the whole wealth of the country. Now the point that we make is, that this proportion (of two per cent) will not be altered by doubling the amount of money in the world; for prices will advance so as to double the nominal value of other property, and thus the proportion will be maintained.

"The Gold mines of California" have proved valuable auxiliaries to the increase of the wealth of mankind within the past twelve years. The addition of the \$700,000,000 which they have given to the "circulating medium," has produced an impetus to commercial and mechanical pursuits which is truly astonishing. They have failed, as we think, to increase the percentage of wealth in proportion to the increase of the percentage of the "circulating medium," as, in the opinion of the *American*, must be the universal law of the increase of coin; yet they have done better than that—the facility which they have afforded by their increase to a reliable circulating medium has so stimulated all branches of business, and in such a healthy manner, as to greatly increase the proportionate wealth of the world to its proportion of circulating medium. In all this, however, in far as their yield has been converted into coin, the "Mines of California" have added nothing to the actual wealth of the world. A coined dollar of California gold is simply a representative of a certain amount of wealth. Destroy its value as a representative of that wealth, and it will be sought after no more earnestly than will its equal weight in iron.

COAL OIL FOR DRILLING GLASS.—A correspondent of the *Scientific American* says that the best lubricating fluid for drilling glass or very hard steel is coal oil. The direction is to merely wet the point of the drill with the fluid when it is found to give the instrument a better "bite" than anything else. The correspondent says he has thus drilled into the edge of common window glass to the depth of an inch, using a drill one forty-eighth of an inch in thickness. The glass is not so apt to flaw, or break, as when other substances are used.

THE finest features of the face are chiseled by the mind—as the latter becomes cultivated and refined, the former becomes more and more beautiful.

## Imports and Exports—The Currency Question.

Our imports, during the nine months preceding Nov. 1st, have been only about \$30,000,000 in excess of our exports; yet our exports of specie have reached, during the time, the high figure of \$45,000,000. The balance of trade has but little to do with this extra outflow of gold. This excess of specie shipments is due in part to the large transfers of capital which are now being made for investment in foreign stocks, but mainly to the present depreciated condition of our currency. This currency depreciation has increased the rates of foreign exchange about 30 per cent, which, in effect, is equivalent to an export tax of that amount on all produce and manufactures shipped to foreign ports. Our exports the current year are estimated at about 200,000,000. The present high rate of exchange, therefore, is equivalent to a direct tax of \$60,000,000 on our exporters, or, indirectly on the consumers of imported goods. This is the annual rate of amount which our people are now paying as a consequence of our present disorganized currency. The burden might be borne more resignedly, if that amount were being paid into the National Treasury—but when it is borne in mind that this large sum of money goes into foreign hands, and to that extent directly impoverishes our people, the fact calls loudly upon the incoming Congress to devise some means to remove this great burthen from the nation. Congress can undoubtedly accomplish such an act, without overstepping its constitutional limits.

It has been suggested that the end desired may be reached, or at least very closely approximated, by the Government simply confining itself to the paying out of Certificates of Indebtedness, only instead of Demand Notes, which, when paid in, should be retained and destroyed. This, with a vigilant and economical prosecution of the war, with a view to its speedy termination, would, no doubt, greatly reduce the premium on gold, and, to that extent, relieve the people of the present indirect system of taxation in favor chiefly of a Power which entertains but little sympathy for the Cause of our National Unity. The people earnestly demand some action in this matter.

THE HEIGHT OF AN OCEAN WAVE.—It was prophesied that Mr Brunell's first ship, the Great Western, would be doubled up as she rested on the crest of the Atlantic waves; and we all know how the prophesy was fulfilled. When it was made, indeed we were very much in the dark as to the size of the ocean waves, and it was not until the introduction of long steamers that they could be measured with any accuracy. Dr. Scoresby, while crossing the Atlantic in one of the Cunard boats, some years since, closely observed the waves, and by means of the known length of the ship, was enabled to form a pretty accurate idea of their dimensions. The old vague account of their being *mountains high* was well known before that time to be an exaggeration; but we do not think that even philosophers were prepared for the statement made by this observer, at a meeting some years since, of the British Association, that they averaged no more than twenty feet in altitude, and rarely exceeded twenty-eight feet.

OCEAN HIGHWAYS.—Persons who do not pay special attention to nautical matters, are likely enough to suppose, that considering the large number of vessels at sea, the surface of the great ocean must be dotted over, almost in every part, with the sails of the countless fleet. This, however, is not the case; the ocean, like the land, has its frequented highways and its wide regions of loneliness. If an observer, furnished with a forty-Herschell telescope power of vision, could be elevated to a height great enough to give him a view of the whole Atlantic, he would be struck by beholding hundreds of vessels following one another upon certain lines along a very irregular course, while over a very large portion of the surface not a sail would be visible. In the extensive spaces on both sides of these "Ocean Paths," few vessels will be seen.

MAP OF NEVADA TERRITORY.—Warren Holt, Esq. has just issued another splendid map of Nevada Territory, compiled and drawn by Dr. Henry Degroot, the editor of the *Virginia City Times*. Thus far no better map has appeared and its sale has been extensive. It appears to contain every place and district of note and is executed on copper plates and colored. It will prove valuable and instructive to those interested in that quarter.

**A New Amalgamator.**

The Miner's Foundry, of this city, has been for some weeks engaged in casting and finishing off a number of amalgamating pans or tubs, on a new principle. They are the invention of Mr. Zenas Wheeler, formerly of Grass Valley, Nevada county, and will be known as "Wheeler's Amalgamators." They may be used for both gold and silver. One principle involved in this invention is that the amalgamating and triturating is done in one set of tubs or pans, and the separating (of the quicksilver and amalgam from the sand) is accomplished in another. A set of these pans was constructed at the above foundry and forwarded to the Zephyr Flat mill, on Carson river, owned by Messrs Raymond & Thomson, about three months since, where they have been running, side by side, with the pans in common use, and operating upon a common vat of sands from the mill. The difference in the yield of the two classes of pans, as we learn from several letters from the proprietors and agents of the mill, which we have been allowed to examine, has been from 20 to 30 per cent in favor of the Wheeler pan. This percentage is certainly very large, and we should hesitate to give it were we not able to do so upon the authority of the owners and agents of the mill, who have no other interest in the invention than the providing of the most efficient process for saving the mineral from their ores. The ore upon which the mill is running is the 3d class Ophir ore, a large quantity of which has been sold by the Ophir Company to Messrs Raymond & Thomson. These gentlemen have shown their confidence in the Wheeler pans by ordering eight more of them, (a full compliment for the mill.) The order has been filled as above, and the pans are already at the mill, and will soon be at work. Mr Wheeler has secured a patent for his invention. We shall give an illustration of it next week, or the week after, and a full description. We trust this invention may prove to be all that it is represented. Every invention tending to improve our mining facilities adds materially to the wealth of our State by increasing the yield of her mines.

**MACHINES AND DEVICES FOR THE REDUCTION OF ORES.**—It seems from present appearances, that most Mining Associations, throughout this State and Nevada Territory, are doing very little in the working of ores except by the modes heretofore employed, and in the latter district they are falling back upon Mexican and German processes. A most happy omen has manifested itself, namely: that when a professional quack arrives with new processes, he is viewed with suspicion and distrust, hence their operations are limited and short lived in that quarter. Our stamp mills as constructed by the different foundries in this city, seem to fully answer their intended purpose. An innumerable number of pans for amalgamation have, of late, been presented to the mining public, many of which are employed with great advantage, and form, at present, the chief utensil in Washoe for extracting silver and gold. The Freiberg barrel process seems, however, to gain over all new fangled notions, a few of the leading companies having adopted this mode already.

The latest discovery announced is that of a smelting furnace on an entirely new principle—the oxygen of the atmosphere being the chief or only fuel employed. This invention is designed to do away with all reduction works and extract the ores by smelting alone. The inventor is a lady, Mrs. E.J. Hall, of this city. We have in our office the result of the last attempt to put the invention to a practical test. It was tried upon copper ore, with but partial success. It is claimed, however, that the failure was caused by an improper construction of some portion of the furnace, which cracked during the progress of the experiment. We are told that another trial is to be made soon. Whenever any successful and practical result is attained we shall be happy to announce the same and do what we can to bring the invention into notice and use.

**GRAIN SHIPMENTS.**—Large quantities of grain and flour are now being shipped from New York to Europe. During the week ending October 17th, there were thus shipped from that port, 1,140,750 bushels of grain, and 40,138 barrels of flour—in addition a general assortment of other provisions.

**Metallurgical Treatment of Pyrites.**

No mining district or country outside of Mexico and the South-American states, has ever furnished a greater field for the extraction of precious metals from Pyrites, than this State and adjacent Territory. Comparatively few have even succeeded in making this branch of industry pay, owing to immense expenses, time and labor required in treating minerals of this nature; and at present, only Pyrites containing a goodly portion of gold, will pay to work. It may be safely estimated (although many reducing establishments concentrate their sulphurets or pyrites) that, perhaps millions of dollars are allowed to float and pass through the tail-races and streams, in a year. The metallurgical treatment of pyrites is one involving great chemical skill, and can only be undertaken by persons of experience. Although many general processes for the reduction of ores have heretofore failed, yet a universal method for treating pyrites has of late been patented, which works successfully, and greater results have been obtained by this process, than by any other method heretofore known. A short distance from this city, on the San Bruno road, may be seen a newly constructed edifice, containing a reverberatory furnace of considerable capacity, several vats, from 6 to 8 feet in diameter and from 4 to 5 feet deep, metallic gas generators, together with much chemical apparatus, and paraphernalia requisite in a well established metallurgical work. The process which this enterprising proprietor employs has just been patented and is known as the Hydro-chloric process. In a former edition of this journal we gave a description of the *modus operandi*. Many mill owners and mining companies have made arrangements with this establishment for the reduction of their sulphurets, and shipments arrive constantly at the works, which are not far from a landing on the bay. The gentleman who has erected these works is Mr. G. F. Deetken, who has had years of experience in this branch, he has also adopted expeditious plans for concentrating the sulphurets or pyrites, and he shortly anticipates to contract for their pyrites, with all the mills in the State, either purchasing the same at the assay value, or reducing the same for a stipulated percentage. It may be safely stated that from 20 to 30 per cent more of the gold may be gained, than by any of the amalgamation processes.

**PRESSURE OF STEAM IN BOILERS.**—A pamphlet has been published in England by Mr. Anderson, the well known machinist, on the management of steam boilers, in which he says that the pressure within a steam boiler is greater than is generally supposed. With a pressure of fifty pounds per square inch, it amounts to 7200 pounds on every part of the surface exposed to the steam, amounting frequently to many thousand of tons in the boiler, thus accounting for the enormous havoc made by explosions. The joints are weaker than the solid parts; good solid plate will withstand from 56,000 to 60,000 pounds per square inch of sectional area—the joints will give way at about 34,000 pounds, which shows the importance of seeing that the rivets and other fastenings are always in sound condition. Mr. Anderson divides explosions into four classes, namely, from want of strength, deficiency of water, heating of plates, and a variety of other circumstances.

**THE TWINKLING OF THE STARS.**—According to M. Arago, astronomers and others have failed to arrive at a satisfactory explanation of the twinkling of the stars on account of their failure to give an exact definition of the term scintillation. He affirms then, that, in so far as naked eye observers of the heavens are concerned, scintillation, or twinkling, consists in very rapid fluctuations in the brightness of the stars. These variations are always accompanied by variations of color and secondary effects, which are the immediate consequences of every increase or diminution of brightness; such as considerable alteration in the apparent magnitude of the stars, and in the length of the diverging rays, which appear to issue in different directions from their centers. It has been remarked from a very early age that the phenomena of twinkling is accompanied by a change of color. It is asserted that the name of Barakeach, given by the Arabians to the star Sirius, signifies the star of a thousand colors. M. Arago also asserts that the planets twinkle.

The less a man knows, the wider his mouth opens. It is as impossible for a fool to keep his jaws shut as it is for a sick oyster to keep his shell closed.

**Mining Stock Report.**

SAN FRANCISCO, Nov. 28th, 1862.

During the past two weeks the Mining Stock Market, in this city, has been more active than for some weeks previous.

Ophir, appears to be steadily advancing. Sanborn's circular of last week quotes one sale of 16 shares (3 feet) at \$6000 per foot, on 60 days. Sales have varied during the last ten days from \$2,525 to \$3000 per foot. The Market for this stock is very irregular. Buyers at the present time are evidently basing their operations somewhat on the expected dividends for this month. 17½ feet changed hands last week.

Gould and Curry is steadily advancing—probably with the expectation of an early starting of their new and extensive mill. The quotations for the week have run from \$2,200 to \$2,300 per foot.

California is quoted at \$1,400. Market quiet.

Chollar, rests quiet at present, with small sales at slightly reduced rates of previous quotations. It is firm at \$275—\$280 asked.

Potosi has been but little enquired for since the late adverse decision with regard to title. It is quoted at \$70—enquired for at \$65. North Potosi is quoted at \$9—offered at \$12 with no sales.

Sierra Nevada has improved somewhat during the week. It is quoted at from \$75 to \$80.

Danby is quoted out at \$200—220 asked.

Burning Moscow, Considerable has been done in this stock during the last ten days. Quoted at \$60 to \$75. Being freely offered, of late, its tendency has been slightly downward. Present indications, however, intimate an early advance.

Mount Davidson is selling from \$5 to \$6 50

Meredith is quoted at \$15 to \$20—an advance of \$5.

Burnside is quoted at \$22 to \$25—Buyers free at \$20 to \$22.

Iowa quoted at \$130 to \$140.

Norton quoted at from \$12 to \$15—a large advance.

Sacramento is quoted at \$25—Saleable at \$22.

Hazel Green which has recently struck their ledge, was at first thereafter quoted at from \$6 to 10, but owing to a general disposition of share holders to sell, the stock declined to \$5. Late accounts, however, report that the workmen continue to make developments of a valuable mine, and it is confidently expected that there will be an early demand for the Stock at advanced prices.

Chenango saleable at \$1½ asking 3. St. Louis \$3. Kutch & Baker ground has been enquired for at \$10 to \$12—none offered. Cedar Hill Tunnel is held at \$8—no sales. Late discoveries at that point will probably soon bring out purchasers. Rogers is quoted at \$22½.

**Emerald Stocks.**

Wide West appears to be a live institution and is quoted at from \$365 to \$400 in Sanborn's Circular of Nov. 22, and at \$395 sales and \$420 asked, in the Bulletin Mining Stock report of Nov. 25. It has improved about \$90 during the week.

Antelope is quoted at \$65—with \$75 to \$100 asked.

Elton is quoted at \$8 and \$10 is asked.

Silver Hill quoted at the Mining Board at \$10.

Utah has no buyers—held at \$40.

Rio Del Monte quoted at \$11 with \$15 asked.

**Coso Stocks.**

The Josephine, Coso and Willow Springs are the best known Stocks in this district—but no recent transactions have been made in either of them.—The former is held at \$20. No offers are quoted from either of the others.

**Mexican Mines.**

St. Nicholas Silver Mining Co. is quoted by Sanborn's Circular at \$100. Mina Prieta finds no recent buyers, but is held at from \$110 to \$130.

Dios Padre is held at \$50.

Considerable enquiry has recently been made for low priced stocks—more than has been manifested for some time.

**DELAY.**—The delay of our present issue has been unavoidable in consequence of the necessarily prolonged absence of the editor, to so arrange his business in the mountains that he might hereafter devote his entire time and energies to the management of the *Press*. This has now been accomplished, and he can promise the prompt and regular issue of the paper hereafter. Some weeks may elapse before he will be able to make it what such a paper should be; but, by the promised assistance of friends he confidently hopes, ere long, to render the *Mining and Scientific Press* a welcome and valuable weekly visitor to the miner and mechanic, the inventor and manufacturer, and indeed to every one in pursuit of useful and practical knowledge in every department of life and industry.

**IRON CLADS AND THE FEDERAL NAVY.**—There are at the present time not less than 384 vessels of all classes built and being built for our navy. Of these 13 are iron clad, now afloat, and 40—mostly gunboats, in process of construction. When these are all completed we shall number about 40 iron-clads—a number nearly equal, and quite as effective as all the other iron-clads of the world combined!

**EQUALIZING THE SEXES.**—At the outbreak of the present rebellion, as appeared by the census of 1860, there were 730,000 more males than females in the Union—a fact unprecedented in the history of any other civilized nation.—The war, however, is fast equalizing the sexes.

A full and particular account of the Grass Valley Silver Mines will be given in our next issue.

## Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

## PROSPECTUS TO THE PEOPLE OF THE STATE OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hither from England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our Government—to marine conveyances—the merchant—the manufacturer, the mining companies and professional community, cannot but be beneficial, provided the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Pre-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have we the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils; also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay these several important features before our people through the Mining and Scientific Press, and the work he hereby offers. But the most important subject in his mission is the inducements he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the counting house, to the professional man and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

**THE SPIDER.**—This sprightly little insect, usually so much dreaded, is as cunning and courageous, as he is watchful and active. He never hesitates to give battle when his inclination tends that way, and is prompt in his own defense when attacked. But Mr. Spider's morals are not of the best quality, and his voracious appetite sometimes leads him astray; for instance the male will frequently make a meal of his progeny, and highly relish the dish; but this is not always a safe operation, as the female is more affectionate, and loves them tenderly; and if she cannot save them in circumstances of peril, she prefers to perish with them.—The love which she bears to her little ones, she does not always extend toward her mate; but sometimes, after having in vain attempted to prevent him from devouring her offspring, she changes her tactics, and acting on the idea that a cannibal may himself be fit for food, she falls upon him—conquers him, and eats him up.

**WHAT IS DIRT?**—Old Dr. Cooper, of South Carolina, used to say to his students, "Don't be afraid of a little dirt, young gentlemen. What is dirt? Why nothing at all of offense when chemically viewed. Rub a little alkali upon that 'dirty-grease spot,' on your coat, and it undergoes a chemical change and becomes soap. Now rub it with a little water, and it disappears; it is neither grease, soap, water, nor dirt. 'That is not a very odorous pile of dirt,' you observe there. Well, scatter a little gipsium over it and it is no longer dirty. Everything you call dirt, is worthy your notice as students of chemistry. Analyze it! It will all separate into very clean elements.

"Dirt makes corn, corn makes bread and meat, and that makes a very sweet young lady that I saw one of you kissing last night. So after all you were kissing dirt—particularly if she whitens her skin with chalk or fuller's earth.—There is no telling, young gentlemen, what is dirt. Though I must say that rubbing such stuff upon the beautiful skin of a young lady is a dirty practice. 'Pearl powder,' I think is made of bismuth—nothing but dirt."

**ANCIENT DOCTORS.**—Mayerne, a French physician, who is said to have numbered among his patients two French and three English sovereigns—Henry IV. and Louis XIII. of France, and James I., Charles I., and Charles II. of England—was fond of dosing his patients with "pulverized human bones." A chief ingredient in his gout powder was "raspings of a human skull unburied." In the composition of his celebrated "balsam of bats," he employed "adders, bats, sucking whelps, earhewms, hog's grease, the marrow of a sag, and the thigh-bone of an ox." Belief in the efficacy of charms and amulets was once universal with the faculty, and precious stones were regarded as sovereign remedies. The hyacinth and topaz hung about the neck or taken in drink, were certain "to resist sorrow and recreate the heart." The sapphire was "a great enemy to black choler," and was believed to "free the mind and mend manners." A certain kind of onyx was supposed to preserve the vigor and good estate of the whole body. One physician went so far as to declare "that in the body of a swallow there is a stone found called chelidonium, which, if it be lapped in a fair cloth and tied to the right arm, will cure lunatics, madmen, and make them amiable and merry." Herbs were also in great request, and daisy tea was accounted a certain cure for gout and rheumatism. Dr. Bulleyn (of the same family as Queen Ann Bulleyn,) a physician in the reign of Elizabeth, prescribed for a child suffering under a certain nervous malady "a small young mouse roasted." The same doctor stated that "snayles broken from the shelles and sodden in whyte wyne with oyle and sugar are very holsonne, because they be boat and moist for the straightness of the lungs and cold cough."

**FATAL EXPERIMENT.**—A few years ago, a young lady in easy circumstances enjoyed good health; she was very plump, had a good appetite and a complexion blooming with roses and lilies. She began to look upon her plumpness with suspicion; for her mother was very fat, and she was afraid of becoming like her. Accordingly, she consulted a woman, who advised her to drink a small glass of vinegar daily; the young lady followed her advice, and her plumpness diminished. She was delighted with the success of the remedy, and continued it for more than a month. She began to have a cough, but it was dry at its commencement, and was considered as a slight cold which would go off. Meantime, from day to day, it became moist; a slow fever came on, and a difficulty of breathing; her body became lean, and wasted away; night sweats, swelling of the feet and of the legs succeeded, and a diarrhea terminated her life. On examination, all the lobes of the lungs were found filled with tubercles, and somewhat resembling a bunch of grapes.

**COMPOSITORS.**—Compositors are a placid and unimpressible race, who do their work dutifully, without yielding to the intellectual influences represented by it. A clause of an Act of Parliament, with all its whereases, and be it enacted, and hereby repealed, creates quite as much emotion in them as the most brilliant burst of the fashionable poet of the day. They will set you up a psalm or blasphemous ditty with the same equanimity, not retaining in their minds any clear distinction between them. Your writing must be something very wonderful, indeed, before they distinguish it from other 'copy,' except by the goodness or badness of the hand. A state paper, which all the world is mad to know about, is quite safe in a printing office; and they will set up what here is set down of them without noticing that it refers to themselves. It is said that this stoic indifference is a wonderful provision for the preservation of the purity of literature, and that were compositors to think with the author under the "stick," they might make dire havoc.

FRENCH glove-makers are said to derive a handsome revenue from the rats of the Paris sewers, the integuments of which vermin are converted into the most filmy of white gloves for use in London drawing rooms.

**RECENT PATENTS.**—Granted to CALIFORNIA INVENTORS through the Pacific Agency, J. SIEVERSMITH, Solicitor:

E. E. MATTESON, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

ELANDER HEATH, San Francisco, *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

G. F. DEETKEN, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

**TIGHT BOOTS.**—For years there has been a great deal of fault found with the prevailing Paris fashions, because they necessitated the compression of ladies' waists beyond the natural limits; and we have been among the fault-finders, because that we believed that undue compression of any part of the human form is productive of evil results. We begin in the beginning with this matter, in the first place objecting *in toto* to the old-fashioned style of babies' belly-bands, and keep on with our objections whenever and wherever undue compression or restraint upon body or limbs is used.

Tight waists are our greatest abomination, and tight boots come next. They are not quite so life-destroying as corsets, but they are just as foolish; and he whose thoughts are kept down by corsets, bunions, and carbuncles never can expect to succeed. The dandy who will endure the misery of a tight boot for the sake of showing a small foot—and there are plenty of them—deserves no pity.

Bootmakers want reforming. There is no more than one in a hundred who knows how to make a good fitting article, and they will not learn, because people are not so particular as they should be. We would be willing to wager, if it were in our way, that there is not a dozen pair of feet in New York that have not been forced out of their natural shape by the shoemakers. True, we are not so bad as the Chinese, but we are bad enough.

The human foot is a very complex affair; its bones, and tendons, the nerves, and muscles are wonderfully arranged, and were at first all put in the position where they could work together for the best advantage, and it is our duty to keep them as nearly so as possible; and to do this, every full grown man and woman should have a pair of lasts of their own, made exactly like their feet, and should wear no boots or shoes not made carefully on these lasts.—*Hygienic Teacher*.

**HOW TO BREAK A BAD HABIT.**—Understand clearly the reasons, and all the reasons, why the habit is injurious.—Study the subject till there is no lingering doubt in your mind. Avoid the places, the persons, the thoughts that lead to the temptation. Frequent the places, associate with the persons, indulge the thoughts, that lead away from the temptation. Keep busy; idleness is the strength of bad habits. Do not give up the struggle when you have broken your resolution once, twice, ten times, a thousand times.—That only shows how much need there is for you to strive. When you have broken your resolution, just think the matter over, and endeavor to understand why it was you failed, so that you may be on your guard against a recurrence of the same circumstances. Do not think it a little or an easy thing you have undertaken. It is folly to expect to break up a habit in a day, which may have been gathering strength for years. This, in brief, is our answer to a question which is put to us by anxious inquirers from ten to twenty times a week.—*Hygienic Teacher*.

**A ROLLING STONE GATHERS NO MOSS.**—Well! what of that! Who wants to be a mossy old stone, away in some damp corner of a pasture, where sunshine and fresh air never come, for the cows to rub themselves against, and for snails and bugs to crawl over, and for toads to squat under among poisonous weeds?

It is far better to be a smooth and polished stone, rolling along in the brawling stream of human life, wearing off the rough corners, and bringing out the firm crystalline structure of the granite, or the delicate veins of the agate or the chalcedony.

It is this perpetual chafing and rubbing in the whirling current that shows what sort of grit a man is made of, and what use he is good for. The sandstone and soapstone are soon ground down to sand and mud, but the firm rock is selected for the towering fortress, and the diamond is cut and polished for the monarch's crown.

SEAWEED is being extensively used by New York upholsters in place of curled hair. It is said to be a very good substitute, and quite a brisk business has grown up on Long Island, in gathering and drying it for the market. It is put up in bales like hay.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA  
connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company, at Aspinwall.

### FOR PANAMA.

The following Steamships will be dispatched in the month of December 1862  
Dec. 1st—St. LOUIS, Captain E. S. Farnsworth,  
" 11—GOLDEN AGE, W. H. Hudson, Commander.  
" 21st—SONORA, W. F. Laidge, Commander.  
Will leave Folson Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York  
For freight or passage, apply to

**FORBES & BABCOCK, Agents,**

Je4 Corner of Sacramento and Leidesdorff sts.

### RE-OPENING OF

## THE NICARAGUA ROUTE!

People's Line,

CONNECTING CALIFORNIA AND NEW YORK.

700 Miles shorter than any other route!!

EXPECTED TO MAKE THE TRIP THROUGH  
WITHIN 21 DAYS.

The fast and favorite *Double Engine Steamship*

**MOSES TAYLOR, 1,500 tons,**

**E. HOWES** ..... Commander.

Will be dispatched for

**SAN JUAN DEL SUR,**

From Mission street Wharf.

Punctually at 9 o'clock A. M., of

**MONDAY, - - - - - DECEMBER 11.**

Connecting with the splendid Steamship

**AMERICA,**

2,000 Tons.....**JEFF. MAURY, Commander.**

**THE PEOPLE'S LINE**

Has been established on this

shortest, safest and Healthiest Route,

To meet the universal demand for an

**OPPOSITION,**

And every Californian should give it a preference for the public good, as  
well as his own private advantage, which will be secured by

**Reduced Fare, Good Accommodations, and Quick  
Trips.**

This line is intended to be a permanence, and is not put on for the purpose  
of being bought or driven off. Speed, safety and the utmost comfort of pas-  
sengers are the main objects. To secure these no merchandise freight (other  
than specie) will be taken. The **MOSES TAYLOR** is built with **Water-  
Tight Compartments**, and is unequalled for safety as well as speed.  
For information or passage apply to

**ROSS, DEMPSTER & CO., Agents,**  
426 and 427, Battery street.

### LABOR-SAVING

**Rock Drilling Machines.**

**TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRY-**  
**men.** The subscriber, Patentee and Agent for **GARDNER'S PATENTS**,  
will continue to receive orders for

**HAND, HORSE, AND**

**STEAM-POWER MACHINES.**

The Hand Machines are expressly adapted for working in Tunnels, Galle-  
ries, etc., one man performing the labor of three in the ordinary way.

A **FOUR-HORSE POWER MACHINE**, operated by one man, drives a ma-  
chine capable of drilling a four to six inch diameter hole in granite four feet  
deep, and in hard limestone, six feet per hour—the rapidity of the work  
being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the  
machine, and its entire success in reducing the cost of drilling holes to one-  
tenth of the former expense, and on a rock excavation of any extent, from  
fifty to seventy-five per cent. on the entire work. Responsible parties who  
have rock excavations to make in any part of the State, the subscriber will  
undertake and guarantee to perform the work required, at a saving of at  
least twenty-five per cent. over any other process.

Address orders to **WM. W. DENN,**  
oct-3m] Fremont street, bet. Market and Mission, San Francisco.

**F. G. BEPLER,**

**PRACTICAL COPPERSMITH,**

No. 118 (Old No. 22) Bush street,

Between Sansome and Battery,

SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to  
say that I am ready to make and repair with cheapness and dispatch every-  
thing in my line of business; especially all kinds of apparatus used in Brew-  
eries and Distilleries; also, all such as are used where steam, spirits, or  
pumps of any kind be required. Also, Kitchen utensils for Hotels, Restau-  
rants and private houses. Baking apparatus for Bakers and Confectioners,  
as well as all other kinds of copper work.  
All orders from the country promptly attended to.

## A. ROMAN & CO.

WHOLESALE AND RETAIL

## BOOK ESTABLISHMENT.

417 and 419 Montgomery street,  
SAN FRANCISCO.

Orders respectfully solicited and promptly attended to.

A Treatise on Metallurgy, Comprising Mining and General and Particular  
Metallurgical Operations, Etc. Etc. By Frederick Overman.

A Manual of Metallurgy, or A Practical Treatise on the Chemistry of Metals.  
Manual of Metallurgy, more particularly of the precious metals; but includ-  
ing such others as are employed in dental practice.

Records of Mining and Metallurgy, or Facts and Memoranda for the Use of  
the Mine Agent and Smelter. By James Phillips and John Darlington.  
Piggot on the Chemistry and Mining of Copper.

Practical Mineral Assaying and Mining. Overman.

Gold Mining and Assaying; by Philips.

Miners' Companion and Guide, compiled by Silversmith.

Assayers' Guide; or Practical directions to Assayers, Miners and Smelters.

Practical Assaying, by Michell.

Liver Ores and Silver Mines, by Pro. Blake.

Ure's Dictionary of Arts, Manufactures and Mines.

Weybach's Mechanics of Machinery and Engineering.

Neville's Hydraulic Formula Tables.

Fresenius' Chemical Analysis.

Together with many other works in this & similar lines

Books imported to order on short notice.

**A. ROMAN & CO.,**

417 & 419 Montgomery Street.

## Gird's BUDDING KNIFE

THE ATTENTION OF FARMERS, HORTICULTURISTS AND CUTLERS. OR  
manufacturers of Horticultural Implements, are referred to the above  
invention. For description and engraving see MINING AND SCIENTIFIC PRESS  
No. 24, vol. v.

State, Territory and workshop rights for sale at reasonable prices.

Address, J. SILVERSMITH, (Agent for Patentees),  
sep1-3m San Francisco.

## Zur Beachtung für Erfinder.

## V. SQUARZA'S

## PUNCH FACTORY.

WE PRESENT HERewith THE PORTRAIT AND TRADE MARK OF  
the gentleman who heads this article. Mr. Squarza is favorably  
known in this State for his Anti-Divorce Liqueur and similar productions, as  
manufactured by him. We may mention that Mr. Squarza is an fair in the  
chemico-distilling science, hence the celebrity of his articles. He has two  
establishments for the sale of his famous Punch—one on Leidesdorff, the  
other on Montgomery street—which are constantly thronged with our bon  
vivaists.

The following is a list of his liquors, all of which we have tasted, and find  
them the most delicious and harmless beverages in this city, being pure,  
and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser,
Arac do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Cocoa do.	Anti-Dyspepsia Bitters,
Coffee do.		Appetiser,
Tea do.	Morning Comfort,	Ladies' Tears.
Pineapple do.	Kuennel,	

And CHAMPAGNES of all brands.

**Dr. Van Zandt,**

Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practi-  
cal Medicine.

The Mysterious Problem of Material Nature, Electricity!  
Made Subservient for the Cure of all Nervous  
and Spinal Diseases.

**THAT THIS PRINCIPLE,** successfully applied to diseased states  
of the system, is to prove the great sought-for necessity, long wanted  
by physicians, to aid their medicines in overcoming organic and functional  
derangements of the human body. It is a part of the great principle of vi-  
tality known as nervous influence and necessarily must have much to do in  
obviating diseased action.

### Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equi-  
librium of the ELECTRIC principle; and should this secret and hidden equi-  
poise of health be broken or lowered—should the body be negatively electri-  
fied when it should be positively charged—is not the current broken, and is  
there not a war of forces going on in our system? This needs correcting,  
and in order that the tissues of the body should be susceptible to remedial  
agents we must first restore and

### Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly  
in this great magnetic or electrical intensity of the earth, with its influence  
upon our bodies in health and disease, I am led to take advantage of the  
press, through which to awaken attention to the subject, that good may  
come to all.

### No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life  
blood, render the stomach, liver, heart, kidney and all the natural func-  
tions active by ELECTRICAL excitation, and at once the aged, the palsied,  
the nervous, the dispirited, the melancholic, the dyspeptic and the invalid  
revive under its benign influence.

### To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and  
office practice, is owing to his correct views of the origin of all their mal-  
adies. Ladies can consult him with entire confidence, as he is no speculator  
upon human life—but is proving himself the only member of the legitimate  
profession in California who is really successful in removing those ills which  
are the peculiar province of the sex. His high appreciation of their deli-  
cately attuned nervous organism, together with their great sympathetic  
life, renders him doubly able to assuage those silent complaints which  
they bear so patiently and so long. No social disquietude need longer af-  
fect our home circles; for he can arouse the stricken energies; restore the  
wonted tenacity of the body; awaken the melancholic and desponding; ar-  
rest those drains which cause so much anxiety; cure those protean mal-  
adies which have so long

### Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at  
the stomach, wandering pains, wasting away of strength; extreme debility  
and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that  
general depression of life's powers, which go to render her life a misery  
and death a boon. Dr. Van Zandt, with his new method of exciting the  
Electro-Galvanic current, together with his remedial measures which are  
adapted to the necessities of California, will assure you of a complete and  
radical recovery of all bodily and mental infirmities, and will restore you  
to usefulness, and spare you a blessing to your family and to society.

### All the World Over

wherever disease exists, whether special to the soil and climate or com-  
mon to all regions—epidemic or casual, acute or chronic, contagious or non-  
contagious—it is as necessary to restore the ELECTRO-GALVANIC equilib-  
rium, especially in California, as it is to give food to the starving. This state-  
ment is based upon a series of facts extending through many years, and  
verified by hundreds of patients; so that no principle of science, no rule of  
experience, no result of any well known cure, rests upon more sure and  
unassailable foundations, than those which underlie the world-wide reputa-  
tion of Electricity for the cure of all nervous states of the body, faulty di-  
gestion, men al and physical debility or prostration, coughs, asthma, wan-  
dering pains of a rheumatic, gouty or mercurial character, and all forms of  
disease, the result of scrofula or coarctate habit of body.

### None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—  
melancholy which you cannot shake off—loss of power which you cannot re-  
gain—depression of spirits which weigh you down—wakefulness that knows  
no sleeping—business that languishes for want of energy—a void which no  
society can fill—suspicion which no assurance can allay—Go to Dr. Van  
Zandt, for great success, and the safety with which he administers his  
new method of electrical excitation, together with his remedies, which are  
adapted to the requirements of climate and constitution, will assure you a  
radical removal of all bodily and mental infirmities, within the scope of  
science and man to remove.

### The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt  
has made these afflictions an especial study, and that he is the only Sur-  
geon in our State, who has a diploma for that branch of practice. Very  
many of the eye and ear troubles are purely deranged nervous actions, and  
are cured by his electro-galvanic battery—as amaurosis, squinting, catar-  
act, floating specks before vision, twitching of the eyelids, nervous deafness,  
roaring and buzzing noises in the ears, giddiness, etc. All operations suc-  
cessfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29—3m

**FREDERICK KESMODEL,**

Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO.

RECEIVED a diploma at the Fair of the Mechanics' Institute, September,  
1868, also in Sacramento in 1861 for California made Cutlery.

This excitation of the affected with HERNIA, or rupture, or any one in-  
terested, is called to his new method of fitting and adapting Trusses to the  
different cases. It is a well known fact that there has as yet been no system  
of fitting Trusses. There are many different styles which have proven good  
in many cases, but they are all uncertain and cannot be relied on, and in  
severe cases are altogether useless. The following are some of the advan-  
tages I claim for these Trusses above any and all others: First—The Pad is  
formed on the parts to be compressed by taking a plaster cast. Second—  
Having a correct model, it enables me to make the Pad of any desirable  
material, such as horn, ivory, etc. Third—The Pad is so adjusted to the  
spring that no movement of the body will move or displace it. There are  
many other advantages. Examine and judge for yourselves.

**FREDERICK KESMODEL.**

Inventor and Patentee.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent. wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts " "  
 " " 750-1000ths to 950-1000ths " 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight

301 " 500, 7cts, " " "

## DEPOSITS FOR FINE BARS

\$1.16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1.21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1.16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1.16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

## READ THIS!

COAL OIL EXPLOSION.—ON SATURDAY EVENING, WHILE MR. BREWSTER was engaged in the Summer street House in pouring coal oil from one can to another, his wife imprudently approached with a lighted candle and the oil exploded. Mrs. Brewster's arms were badly burned, as were also the husband's hands. However, he succeeded in mastering the flames, and preventing worse consequences. —[Evening Bulletin, Aug. 4.]

## THEN THIS!

## COMET ILLUMINATING OIL!

Manufactured expressly for Stanford Bros.

THIS POPULAR

## BRAND of KEROSENE

Is warranted free from Camphene, Petroleum, or any other explosive material, and is the

Best Family Oil in the Market

STANFORD BROTHERS,

ad14

Nos. 121, 123 and 125 California street.

## 50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. FORCER, Superintendent.

WORKS, North Beach; Office, 318 California st.,  
SAN FRANCISCO

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 511 Market street,  
Opposite Battery, San Francisco.

## LEWIS COFFEY &amp; RISDON'S

## STEAM BOILER AND SHEET IRON WORKS.

The only exclusively Boiler Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work or the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner of Bush and Market Streets.

Opposite Oriental Hotel, San Francisco, Cal.

LEWIS COFFEY J. N. RISDON

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

A Circular containing further information, and a synopsis of the Patent Laws of various countries, will be furnished on application to J. Silversmith, Government House, San Francisco.

Miners, Inventors, Agriculturalists, Capitalist and Mechanics, will find it to their advantage to subscribe for the MINING AND SCIENTIFIC PRESS—being the only journal of that class published upon this continent. Issued every Saturday at four dollars per annum.

Address, J. SILVERSMITH,  
SAN FRANCISCO.

## MUSIC! MUSIC!! MUSIC!!!

A. KOKLER,

IMPORTER OF EVERY DESCRIPTION OF

Musical Instruments and Musical Merchandise.

Sheet Music and Music Books.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

We subscribe ourselves yours,

Rev. W. Stanton, L. L. D.,

Richard A. Vaux,

Dr. Straud, M. D.,

Dr. Loomis, M. D.,

Cleopole Stevens, M. D.,

Samuel Panchot, M. D.,

Walter C. Foster, M. D.,

S. W. Howard, Att'y at Law,

Pierce Butler,

Henry B. Linton, M. D.,

Wm. L. Howard, M. D.,

Philippe Lidy, M. D.,

Myers Davis, M. D.,

W. M. Thompson, M. D., and others.

No. 718 Catharine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skillful surgeon.

MRS. J. W. HAMMOND.

From Dr. W. L. Stevens: Dr. Kennedy has operated upon my feet, and has effectually cured me of some torturing pests that I have been annoyed with for years.

From the Rev. Walter M. Thompson: This is to certify that while sojourning in Philadelphia, Dr. Kennedy has operated on three of my family to my entire satisfaction.

From the Hon. Wm. M. Thorn, ex-member of the Ohio Legislature: This is to certify that I called on Dr. Kennedy to operate on my feet: He displayed great skill as a surgeon, and I am satisfied that he has effectually cured me of those torturing pests which have annoyed me for many years.

From Geo. F. Omerly, 637 Arch street: This is to certify that I called on Dr. Kennedy. He has operated on my feet to my entire satisfaction. au21

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI. SAN FRANCISCO, SATURDAY, DECEMBER 6, 1862. NO. 6.

MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

#### The Mining Interest!

Will find it of great value as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

#### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

#### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

#### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

#### Terms.

To mail subscribers:—Four Dollars per annum.

#### Club Rates.

Five Copies for Six Months, \$8.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 50.

Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

W. B. EWER, Publisher,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

#### Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

**THE FATAL COLOR.**—The present war is teaching the nations many things both new and strange. Many of its lessons are great with present importance, as for instance the introduction of iron armor for war vessels and the vastly increased weight and effectiveness of artillery now brought to bear, etc. There are other lessons which it is teaching, of minor present importance, but which to the observing mind, are not to be passed over, as things of too trivial import to be heeded in this age of rapid progress. Among the latter lessons may be enumerated a large class of facts having a bearing upon the sanitary condition of soldiers in the field and hospital—to one of which, only, we would now allude, by copying from the N. Y. Journal of Commerce, the following paragraph which appears in that paper under the head of "The Fatal Color."

In this age of Minie rifles, telescopic sights and sharpshooters, it will not do for our soldiers to wear red. Of all the colors that is the very best to "draw a bead" on. An aim which might be uncertain at a green, blue gray or neutral tint, becomes fearfully exact when it is brought to bear on a flaming red target. The fate of those two fine, daring regiments, the New York 5th and the Brooklyn 14th, of which red is the distinctive color, proves this. Each of these regiments is reported to have lost far more than its proportion of men in every engagement. About three fourths of the casualties among them are said to be in the red-trousered less. After the battles of South Mountain and Antietam, the Brooklyn 14th, mustered less than fifty men. If the Zouaves could show a larger number, that is because they have been more recently recruited. The brave men of these two regiments would probably vote unanimously to retain the fatal uniform in which they have won their reputation. But their safety, and that of all other regiments of the red order, demands that red trousers, red coats, red shirts, and red caps, should not be allowed on the field of battle.

**INTERESTING IRON EXPERIMENT.**—A simple illustration serves to show a very important fact connected with iron, viz: extreme elasticity, which yields to a force almost incredibly feeble.

Make a hoop of one inch square bar-iron, about the size of the brim of a man's hat; let the inside of the hoop be made quite smooth and true. On examining such a hoop, it would appear that the power even of a horse could in no way alter its shape or form, provided the strain be put to it fairly and equably. Now make a rod of iron of the thickness of a lead pencil, that shall exactly fit the diameter of the hoop, so that, when placed in the hoop it will not fall out unless the hoop be altered in shape. If, acting in a similar way, we take a child's wooden hoop with a stick across it in the centre, and then press it at the sides opposite to that of the cross stick, the hoop will assume an oval shape, and, of course, the cross stick will fall out. Just so does the iron hoop described, act; when any one presses it, the iron rod falls out, showing clearly the elasticity of the iron. The hoop will become oval shaped with a very little pressure not greater than that which can be exerted by a young girl.

**A WHISTLING OIL WELL.**—A novel incident, says the Philadelphia Ledger, occurred on the McClintock Farm Oil Creek, recently. That portion of the tubing of the Van Slyke well which runs into the receiving tanks from the well, was removed in order to make some repairs, leaving the conductor pipe still in the well. Next morning the inhabitants of that region were startled by the sound of a gigantic steam whistle, and found that it proceeded from this well. The gas forced up through the pipe had probably met with some obstruction, which caused it to perform in this way. The scream of this whistle was tremendous, and could be heard several miles.

**THE GREAT THEATRE OF EPHEBUS.**—The great theatre of Ephesus has recently been examined and measured. It must have been the largest ever erected. Its diameter was 660 feet—40 feet more than the major axis of the Coliseum. Allowing 15 inches for each person, it would accommodate 56,700 spectators. Drury Lane Theatre (London) will contain only 3,200, and old Convent Garden held 2,800. This edifice was the scene of one of Apollonius' miracles; it is memorable for the uproar described in Acts XIX., when the Ephesians accused Paul and the Christians in this building. To this edifice the writer to the Corinthians alluded, probably, when he said: "If, after the manner of men, I have fought beasts at Ephesus, what advantageth me?"

**STABILITY OF WATER.**—We cannot any longer sustain the ancient faith in the stability of the "terra firma," as contracted with the ever changing nature of the sea. Recent discoveries have proved, on the contrary, that the land changes and the waters are stable. The ocean maintains always the same level; but, as on the great continents, table lands rise prairies sink, so does the bottom of the sea rise and fall. In the South Sea this takes place alternately, at stated times. To such sinking portions of our earth belongs among others, New Holland. So far from being a young land, it is on the contrary, with its strange flora, so unlike that of the rest of the world, and its odd and marvelous animals, an aged dying island, which the ocean is slowly burying inch by inch.—*Stray leaves from the book of Nature.*

**FALLING FROM ALOFT.**—The New York Times, in an article on seamen falling from aloft, remarks:

We doubt if any one is aware of the number of seamen in our merchant service, whose lives are annually sacrificed in this way. It is a brief record and attracts no attention, which appears in the marine reports every morning—that on such a day, a seaman fell from the jib boom or the top-sail yard of the fine packet ship Blowhard, and was lost. Yet we venture to say that not less than a thousand seamen fall from aloft on Amer can ships every year, while in the discharge of their duty, and perish, unknelt, uncoffined, and unknown.

**VOLCANO NEAR ROME.**—A Roman journal states that something like an incipient volcano has made its appearance near the Civita Vecchia railway, about two leagues from Rome. A committee of Engineers and Geologists have been sent to examine the eruptions of smoke and sulphurous exhalations have been observed. In their report they state that the seat of fire is on the right hand of the railway, at a place called Monte delle Preche. For the space of two hundred square metres the ground is so hot that no one can stand on it long.

**CONFLAGRATIONS IN THE PENNSYLVANIA OIL REGIONS.**—Numerous fierce and destructive conflagrations have from time to time occurred among the oil wells of Pennsylvania the latest of which is thus noticed in a local paper dated, Oil City, Pa., Oct. 8th, 1862.

A terrific fire is raging on Oil Creek, on the Blood & Tarr farms. The oil wells and several refineries are in flames, and a large amount of oil has been consumed. The flames extend over half a mile. The loss is estimated at from \$100,000 to \$200,000. The flowing wells are still on fire. 30,000 bbls. of oil have been destroyed, besides a great many buildings.

**POISONOUS GREEN PAPER.**—Dangerous green paper hangings, stained with arsenical color may be recognized by a very sure and easy test, common spirits of hartshorn, or ammonia. On application of this, the beautiful but dangerous green becomes blue. The danger from these paper hangings is much greater than is commonly supposed. Deaths are constantly being recorded, now that attention has been called to it, which are clearly due to arsenical poisoning from its source.

## Lubricating Fluid.

Few subjects of an apparently simple nature are of more commercial importance than the discovery of some suitable and reliable material for the proper lubrication of machinery and some self-acting machine or instrument which shall properly feed such portions of machinery, as from their condition, require a regular and constant supply of lubricating fluid.—With regard to the fluid to be used, many preparations simple and compounded, patent and otherwise, have been offered to the public.

Mr. F. W. Perrott of Walworth, England, has recently patented, in that country, an invention which, after much experience, he thinks appears to meet the end desired a little nearer than any thing else yet produced. He uses a mineral preparation which consists of micaceous iron ore, in combination by preference with oleaginous and fatty matters. Micaceous ore is a species of hematite, found in various parts of the world. The proportions he uses are for one sort—ore 7 parts, oil and tallow combined, 1 part. The tallow is first boiled, and then the ore, which must have been carefully washed to free it from grit, is stirred in and mixed with the tallow, to which the oil is added. Another sort is composed of ore,  $6\frac{1}{4}$  parts; tallow,  $\frac{1}{4}$  part; oil,  $\frac{1}{2}$  part; and a third kind—ore, 5 parts; tallow,  $\frac{1}{8}$  part; oil,  $\frac{3}{8}$  part. The first is strong, the second medium, and the third a thinner and finer quality.

Mr. Leroy, of Paris, France, another eminent practical machinist, recommends a composition made up as follows: Tallow 252 parts; good lubricating oil, 333 parts; soda, 14 parts; potash, 12 parts; and water, 389 parts. The potash is first dissolved in the water, the soda is then introduced, and, finally, the oil and tallow are kneaded with it.

Messrs. Huck & Lambert, of this city, also make a very superior article of lubricating fluid, designed more particularly for heavy bearings—such as heavy teams, etc. It is produced by a chemical combination of suitable oily substance, purified by distillation, and carefully freed from all resinous, or pitchy matter which tends to gumming. The chief peculiarity of this article is its great consistency—not being attended by any ordinary exposure to the sun or any moderate artificial heat—its liquifying point being 200 degrees. Its tendency is to adhere closely to the axle and keep it cool, in a hot sun, where other materials would become heated and run or wear off.

The obstacles to good lubrication—hot bearings, the gumming of different oils, continual waste and its necessary lack of cleanliness, the constant attention required, great cost, and others which might be enumerated are all involved in the mode of lubrication generally employed. The gumming is as often occasioned by an excess of quantity, as by the impurity or inappropriateness of the material used. In order to obviate the excess of quantity and ensure a regular supply, an ingenious mechanic in England has recently invented a simple instrument which may be attached to almost any machinery, and which is described in the London *Mining Journal* as follows:—

A simple tin box contains the lubricating matter, of which we have so many descriptions for all sorts of purposes. The box is furnished with an axle running its whole length, supplied with as many cups as there may be journals or bearings to lubricate. At one end is fixed a small cog wheel, which is caused to rotate by a small crab-pin resting against an eccentric. The quantity contained by the cups as they rotate can be determined by a small screw inserted in each, and may vary from 1 drop to 50, supplied to the lubricating tubes, and, once the box filled with oil, no further attention is necessary for from 12 to 24 hours.

The Editor of the Journal adds—

No waste can accrue, as all the oil necessary for lubrication being used up, and no more than is necessary supplied, there is no further waste that must accrue by the use of the best known lubricators, after the lubricating properties have been extracted and made use of. Seeing that by the simple nature of the construction of the instrument it will continue to work while the machinery is in motion, it will suffice to refill the cans every 12, 24, or 48 hours, according to the size of the instrument. It requires no unnecessary attention or constant labor. Any kind of oil may be used, an essential called Feint's oil has been for some months in use by the inventor. This instrument has not yet been brought into public notice, and it is only at the instigation of several friends that the inventor, Mr. Swan, has been induced to register his instrument, and allow the public the opportunity of profiting by his ingenuity. That the cause of the gumming of

various oils is difficult to solve, and depends, no doubt, on a peculiar quality in such oils, the exact composition of which is not yet determined, there can be no question; but that a very great deal depends on the manner in which oil is supplied to bearings, or journal, requiring lubrication there can likewise be no question. We ourselves have seen hot bearings cooled by the incessant application of small quantities of resin oil, generally supposed to be peculiarly subject to the quality called gumming, and certainly not considered a good lubricator. But from what we have seen at Messrs. Haig and Co.'s distillery, Hammersmith, and which every one interested in this matter may also see, little more remains to perfect the present obstacle to lubrication.

**TRIAL OF A STEAM PUMP.**—A trial of Capt. C. H. Harrison's Eccentric Pumps took place on Broadway wharf, in this city, on Friday last. The machine continued in operation for some hours, and its performance was witnessed by quite a number of scientific and curious spectators, all of whom pronounced it a complete success. A very much accelerated speed may be given to the pump over that applied at the late trial; and, of course, the volume of water raised will be in proportion to the speed attained. It is a light pump, and the elevation to which a column of water can be raised is limited, only by the force of the driving power, and the strength of the pipes. This pump has been arranged in three sizes; the first or smallest of which, at ordinary work, will raise seventy-five gallons per minute, the next larger size will raise five hundred in the same time, and the third or largest about three thousand gallons. Of course these amounts may be considerably increased, when occasion requires—provided the requisite power be applied. For mining purposes, where large quantities of water are to be raised from great depths, this pump seems to be peculiarly calculated, as it is simple in construction, compact, light, and easy of transportation.

From a return made to the Surveyor General of the State by the Assessor of the City and County of San Francisco, we compile the following Statistics of the Vegetable and Fruit products of this County for the past Fiscal year:

Apple Trees,	4679,	Peach Trees,	428,
Pear “	2771,	Plum “	196,
Nectarine “	32,	Cherry “	401,
Quince “	71,	Apricot “	50,
Gooseberry Bushes,	1701,	Strawberry Vines,	2589,
Raspberry “	3390,	Grape “	107,

and the following numbers of Live Stock and Poultry during the same time:—

Horses,	735,	Mules,	358,
Asses,	275,	Cows,	5440,
Calves,	621,	Oxen,	50,
Sheep,	3070,	Goats,	414,
Hogs,	7377,	Chickens,	7329,
Turkeys,	274,	Ducks,	3130,
Geese,	800,		

For a County that is nearly all brick and mortar this is a good showing.

**OCBRE.**—It is almost impossible to keep pace with the new mineral developments of the Pacific Coast. The deposit of ochre, recently found at Marines, opposite Benecia, seems to be attracting some attention and may yet prove a valuable find. The *Call*, of recent date, says that a quantity of this mineral was lately placed in the hands of Mr. G. A. Lloyd, a master painter, of this city, who at once pronounced the article fully as good as the earth paint which is exported so largely from Sicily. Without trusting, however, to a superficial examination of that kind, he determined to thoroughly test the packages. The rock (for it is a species of soft rock) was ground up and Lloyd mixed it in the same manner that painters mix the *terra di sienna*. Slabs were procured and a very fine specimen of oak and rosewood graining was produced.

**OPHIR ROCK.**—The float rock, in fact the original croppings taken from the famous Ophir mine, says the *Virginia City Union*, 22d inst., are now being hauled away for crushing at the various mills. Most of that large pile of rock, at first thrown out as worthless, has been crushed and found to pay, and now the croppings are to take their turn. The day is not far distant when much of the rock from other claims, now considered valueless, will be worked and made to furnish its proportion of our daily shipments of bullion. The Ophir, we see, has commenced two new dump piles to receive, we suppose, the first and second class ores, while the third class will probably continue to be thrown upon the old and original dump.

## Musical Artists and the Drama.

The California public is said to be a great patron of the arts and sciences, which in a measure we will verify and attest as being the fact; but that it is possessed of a proper judgment or knowledge of the real merit of an artist is far from the truth. We have been visited by many renowned in their profession abroad, and these have left our shores never to return. And again we have been favored with lesser talent, and because extensive posters puffs, and long-winded editorials, commendatory of such upstarts, heralded them, these have remained and amassed fortunes from a deluded people. Our public is decidedly a peculiar one, particularly for taste and style, for instance: a new nigger-minstrel is announced, and performs before the *elite* in this city; the next day the *Alta* will come out with a criticism on his *debut*, as though he were as great as Formes, or any of the celebrated Tenors, and the minstrel goes on rejoicing night after night. A few who claim to be versed in music will go to see the opera, we will call these the *elite* of our city, and include therein the musical critics of the various daily journals, who like *claqueurs*, applaud before a melody or *recitation* is half finished, thus betraying a vast amount of stupidity and ignorance, besides annoying those sitting beside them. Opera after opera is announced and performed, and no matter how badly put upon the stage or executed, the same commendatory notices appear, and the “able management” (?) eulogized for the great enterprise displayed.

The opera of *Macbeth* has been twice performed, and we confess that since we listened to it in Havana years ago by a talented Italian Troupe, the several leading artists failed not in ringing applause from the writer. Our pity and disgust reached its highest point, when, though informed by bills, etc., that new costumes, scenery, etc., had been added for the occasion, those improvements failed to appear, while several scenes most essential to the work, were omitted, to say nothing of being seated in that dense little box of a melodeon, where the best efforts of artists, either vocal or instrumental, seem not to blend, but rather form a racket of musical and boisterous concord. That “able management” (?) ever ready to cater to the taste of our people, seems to be up with the requirements of a well appointed orchestra. One violin has to do all the tall “fiddling” in that sublimest work of Verdi!—entitled *Macbeth*. The dollar paid we regretted, as did many others. We advise the Bianchi's, if they propose to bring out more new operas, to take the Metropolitan, or some other theater, and appoint an orchestra worthy for the task; the opera can then be successful. When the “able management” bandies for a few paltry dollars with musicians by reducing their wages and similar shortcomings, no success can attend their efforts. S.

**RICH ON PAPER.**—It appears from a recent report of a Committee of the Nevada Territorial Legislature, that from the 29th day of November, 1861, to the 21st day of October, 1862—a period of less than eleven months—one hundred and eighty mining incorporations were formed under the general laws of the state of California to operate on mining interests within the territory of Nevada. The capital stock of these companies foots up to the round number of *seventy-eight millions* of dollars! We have not the means at hand of giving the amount of incorporated capital, organized in that Territory prior to the first above mentioned date, but presume it cannot fall but little if any short of the amount since organized—which would give a total aggregate of at least \$150,000,000, a pretty good capital for a new Territory to begin business with.

**TALC.**—The editor of the *Territorial Enterprise* has seen some very fine specimens of talc obtained from an extensive deposit of this mineral somewhere in the vicinity of Pyramid Lake. This mineral is also found in great abundance near the Humboldt mines, where it is said that it may be obtained in sheets, four feet square! and in unlimited quantities. It has been suggested that this mineral might make an excellent and durable material for roofing. We can see no reason why it might not be altogether preferable to slate for such a purpose. The experiment is certainly worth a trial, and when we get a railroad from this city to the Eastern Slope, if the roofing experiment is found to succeed, it would afford a large amount of return business for the road, and furnish the city of San Francisco with a most elegant, and durable fire proof material for roofing and siding too.

## TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Title of Company and names of officers for the year.	Am't of stock & value per share.	When incorporated

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.

PALMER, HANSCOMB &amp; CO.,

**Golden State Foundry and Machine Works,**  
First Street, near Market, San Francisco, Cal.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast.  
San Francisco, November 29, 1862 3m

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 ACRES, HAS RECENTLY been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect. For further particulars apply to  
HARVEY S. BROWN,  
No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office, no 13 6mo

## DEETKEN'S

Chemical and Metallurgical Works,

ON SAN BRUNO ROAD, ISLAIS CREEK,  
SAN FRANCISCO.

CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON. ALL THE GOLD EXTRACTED by Chemical process. Yield of Sulphurets from 30 to 50 per cent higher than the BEST AMALGAMATION PROCESS. Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov8-3m

JULIUS SILVERSMITH,

COMMISSIONER FOR NEVADA TERRITORY.

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery &amp; Washington sts., Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

W. T. &amp; J. GARRATT,

THE  
NEW ENGLAND SEWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before  
the public. In cheapness, neatness, compactness, durability and beauty,  
it has no rival. It is made with special reference to the wants of a family,  
and any one with the aid of the printed directions can learn to work it  
successfully in a few hours. It will work from leather to the finest cambric  
without the change of needle, tension, or feed. It gives the best satisfaction  
where it is sold, and all who use or examine pronounce it better adapted to  
meet the wants of every family than any other machine now offered to the  
public. Gauge and hemmer attached.

Every machine warranted, and kept in order free of charge. This is the  
only cheap machine that will do all kinds of family sewing.

STEWART & SHEAR, General Agents,  
No. 60 Second street.

# Mining and Scientific Press.

W. B. EWER, Editor.

SATURDAY ..... DECEMBER 6, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## Practical Science Indispensable to National Progress.

"Science and information are the joy and justification of mankind. They form the springs of a nation's wealth, being often, indeed, substitutes for those material riches which nature, in many cases, distributed with so partial a hand.—Humboldt.

A more important truth was never penned by the great German philosopher than the one above quoted. It is a truth which should be converted into a living faith in the minds of all who have a heart interest in the material development and national progress of the country of their birth, or of that land which they call "home." It is one of the great faults of our political system that, with us, Government seems to lose all sight of its obligations to provide cheap and universal education after it has carried the child through a course of primary instruction in our common schools. With the exception of a little stinted assistance, now and then, to some Collegiate Institution, where the dead and dying languages, and the mere theories of science are taught to a limited extent, government, in this country, both state and national, seems to conclude that it has fulfilled its educational duties to its adult population. There is not a leading state in Europe which is not far in advance of this people in the practical acknowledgment of the importance of providing intellectual training for those entrusted with the great mercantile, mechanical and manufacturing interests of their several nationalities. The evidence of this may be found in the large endowments and appropriations constantly being made by foreign governments in support of institutions and publications connected with industrial science.

There never was a period when a union of skill and science was so much needed by the nations of the earth as at this present time—there never was a people to whose national advancement universal practical science would add such an impetus as to our own, and among our state organizations not one other of all the number would derive a tithe of the benefits which would accrue to California from a universal diffusion of such information as would combine science with its practical application to the development of the varied resources, mineral and agricultural, of our state.

It is true and "pity 'tis 'tis true" that practical science has not yet reached its just position, in public esteem, with any people. It was a knowledge of this fact that brought out the happy expression already quoted from Humboldt, who again writes—"An equal appreciation of all parts of knowledge, is an especial requirement of the present epoch, in which the material wealth and increasing prosperity of nations are in a great measure based on a more enlightened employment of natural products and forces."

The time has been when a nation's prosperity was founded almost exclusively upon local advantages or accidental combinations. In the incipient progress of England's greatness the occurrence of coal and iron within her borders, to an extent nowhere else known at the time, served as a foundation for a progress in manufacturing art which, at one period, promised to make and continue her as the overshadowing power of the earth. At that time immense tracts of fertile land, and a genial atmosphere pointed out this country as the future granary and staple producer of the world, while the still more genial climes of France and Italy seemed to give those countries the exclusive control of the production of silks and wines.

Had not the struggles of science in the 16th century suc-

ceeded in freeing itself from the trammels of an ignorance that would have laughed Columbus out of the effort which gave to Europe a new world, and deprived Galileo of his liberty for presuming to assert that the earth revolved on its axis, each of these countries, even to this day and a century hence, might have continued in the dull routine, which, according to the theory of the day, nature designed them.

But science, in its progress and practical adaptation to industrial pursuits, has of late produced a wonderful transition in human conceptions, and is now teaching the nations the important lesson that they must acquire and maintain their respective levels by the force of their intellectual developments, instead of resting in security upon the natural developments of soil and climate. It has now come to the knowledge of mankind that that people which is most liberal and earnest in the intellectual development of its working and producing classes—of its artisans and mechanics—is destined to override all local advantages and leave far in the rear, in material progress, all other peoples, who attach less importance to the intellectual development of their adult population. Even a superabundance of capital, or the possession of inexhaustible mines of the precious metals, if unaccompanied with intellectual training, will be without avail to save a people from becoming laggards in the modern march of national progress.

Neither the highest order of "common sense" nor the most abundant gift of "Yankee shrewdness" will avail a people unless her "sons of industry" become the earnest disciples of practical science. Practice and science must henceforth go hand in hand, or a general emigration of the former will soon leave the laggard people who reject the union in a slough of national despondency.

We have said enough, if, indeed, it were necessary that anything should be said to awaken our newly elected legislators, and all others having influence or power, to the importance—to the indispensable necessity—that the people of our country at large and those of this state in particular should have the means placed before them for the acquirement of practical, scientific information—each one having a reference to his own particular calling in life, whatever he may have chosen. The miner needs his "School of Mines;" the farmer his "Agricultural College;" the merchant his "Mercantile Academy;" the mechanic and artisan each need their appropriate fountain heads of instruction, and those who go down upon the sea in ships, who carry our manifold products to the ends of the earth, and defend our flag upon the highway of nations, need also their "Schools of Navigation." As surely as night follows day, so surely, unless our people demand and secure additional facilities for practical science to those which now exist, will our people fall, early, into the sere and yellow leaf of decay. Nothing else, as we have already said, can save us in the modern march of material progress wherein other nations are endeavoring to outstrip us by the superior intellectual advantages, which they are placing within the reach of their peoples. The terrible dangers and awful forebodings which now hang over our national existence, betoken less real danger to the Republic than does the apathy and indifference manifested by our people with regard to the subject which we have been considering, and which we propose to still further discuss in future numbers of the Press.

## THE GRASS VALLEY (NEVADA Co.) SILVER MINES.

During our recent trip to Grass Valley, we paid a visit to what are now pretty extensively known, throughout the state, as the "Grass Valley Silver Mines." We were accompanied on the visit by our excellent friend PHIL. ROBERTS, one of the proprietors, and one who is, if not the first discoverer, at least the chief pioneer of these mines, and one who has done as much or more than any other person toward their development. The mines are located about six miles, almost due East from the town, in a very wild, romantic region, and near the banks of Greenhorn Creek, from which stream the first company located took its name.

The mine is located, according to the best of our recollection—for we did not notice particularly at the time of our visit—in a region of talcose slate. The direction is nearly N. W. and S. E., dipping east, very winding, but easily traced, by surface croppings, about 3000 feet. The only companies which have yet struck the vein are the GREEN

HORN, 1200 feet, and thence, running south, the CENTRAL, 600 feet and the MONROE, 1000 feet. The next company, south, now known as the Potosi, but which, we understand, intends to change its name, have run a tunnel into the hill about 150 feet, but have not as yet struck the lead.

Below this company we understand that a company, known as the Buffalo Co., have located a set of claims, and commenced work. We learn that they have already struck a heavy ledge, with good indications, which is thought to be a continuation of the Monroe Lead.

The Monroe company is the only one which has been incorporated. They have ten or twelve men now at work, getting out ore, under the direction of Mr. D. C. Odell, and are working in two shafts, and also running a tunnel, commencing at the lower extremity of their ground. This tunnel will drain the upper portion of the mine fully 150 feet. This company was the first to secure a working prospect for the mine. One of the proprietors, Mr. G. C. King, sent down some 1900 lbs. of croppings, in July last, which were reduced by Bradshaw & Co. of this city, who returned a result of \$42 in gold and \$53 in silver. The rock crushed at their mill, hereafter mentioned, was taken from near the same locality. About 100 feet from their lower line a cross vein appears, which presents quite as favorable an aspect as the true vein, which latter does not appear to have been at all disturbed by this apparent intruder. The company has leased a mill which will be more fully alluded to at the close of this article, and when we were there had about 50 tons of rock on its platform.

On the Central company, nothing was doing so far as we were informed. A tunnel was driven up to the vein a short time since, from a neighboring ravine. We are not advised as to what their intentions are for the present season; but they will, in all probability, soon undertake active operations, as their mine, lying between two others known to be rich, must, beyond a doubt, be valuable.

The Green Horn company, which is made up chiefly of Grass Valley men, was the first located and has thus far proved the richest of the three, gold being its chief return. It is from this ground that all the gold specimens, which first brought this mine into special notice, were taken. Two pockets have been struck, the first in September, which yielded about \$3000 in specimens, the last in November, yielding about \$400. This mine is also well located for working. About 120 tons of rock have been taken out and a very comfortable board cabin built during the past two or three months, all at an expense of about \$350. "PHIL" however, has a peculiar way of making a little money perform a large amount of work. The mine, when we were on the ground, was worked by an open cut about 40 feet in length on the line of the vein, which is very heavy, averaging, throughout this cut about four feet in thickness. Since that time a short tunnel has been commenced, from which rock will be taken during the winter. When the Monroe company's tunnel shall have been driven up to the south line of the Green Horn claims it will drain their present workings to a depth of about 300 feet, and the upper portion of their ground fully 600 feet.

Several other "extensions," than the ones named, have been staked off and recorded—among them we believe are the Green Horn, No. 2, and the Chicago. Of course the excitement connected with the successful opening of this mine has attracted to the neighborhood large numbers of prospectors, by whom "all the region round about" will be thoroughly prospected, and perhaps other equally rich or richer leads will soon be developed. The neighborhood of these mines is an exceedingly rough one—very forbidding in appearance to the prospector, well wooded, and one which until the present time has been but little examined.

## THE REDUCING MILL AND ITS MACHINERY.

Subsequently to our trip to the mines we paid a visit to the Monroe Co.'s mill, accompanied by one of its proprietors, Mr. G. C. King, by whom we were introduced to Mr. S. F. Clouser, the gentlemanly superintendent. The mill is located in Boston Ravine, about half a mile east of the main town of Grass Valley, and has long been well known thereabouts as the Empire Mill. The mill has been leased for a short term with the privilege of purchasing on extremely favorable terms. Of course the unexpectedly rich development of the mine will determine the company to avail itself of its privilege to purchase. It is the intention also of the company to remove the mill, early in the spring, to the

mine, where a location has already been selected, and where an abundance of employment may be found for the same. This mill has eight heavy stamps, to which four more will probably be added, and is driven by a very superior 60-horse power engine. The amalgamating pans now in use are what are known as the "Knox pans," heated by steam chambers. The chemical process employed is that of Smith & Dewey—the same which is used at the Ophir works in Washoe.

The first "clean up" was made on Saturday of last week, after one week's run, with a result, which greatly delighted and surprised every one interested in the success of this new enterprise. The Green Horn company had a little short of 20 tons of rock crushed, and took out two bricks valued at over \$4000—upwards of \$200 per ton! and this rock, we know from careful inspection was from the most unpromising portion of the pile lying at the vein! This clean up was mostly gold, there being merely a trace of silver. The result in that respect was what was expected. The rock which the company is now taking out, and which will enter into the next crushing, contains a large amount of silver with the gold.

We have not learned either the amount of rock crushed or the mineral taken out from the Munroe company's claims. The bricks from their "clean up" are silver bricks, containing, we believe, considerable gold, but their value cannot be ascertained until the metal is parted. The result is, however, quite as satisfactory as that from the Green Horn, and with many, more so, from the undoubted fact that that portion of the mine is unquestionably silver ore, and hence more reliable than any gold mine. The Green Horn is located about 300 feet higher than the present workings of the Monroe, and our impression is that when the former is worked to the same level with the latter, both will prove to be valuable silver mines, and fully establish the fact that we shall not hereafter be obliged to go to the Eastern Slope to find silver. We shall watch with considerable interest the future development of these mines.

#### COPPER MINING IN CALIFORNIA.

Copper mining has already become one of the features of California, and is evidently destined, at an early day, to employ a large amount of capital and form one of the chief mineral products of the State. From every direction we are in the constant receipt of intelligence of new discoveries and the successful workings of already developed leads. The large pile of copper ore which has been lying upon the sidewalk in front of Duncan & Co.'s, on Montgomery Street, for the past week or ten days, affords the most abundant evidence of the value of the recently opened mines in Calaveras county. The ore alluded to is from the Napoleon mine, situated about thirty miles east of Stockton, in Calaveras county. Quite a little town is growing up about this mine, which, in anticipation of its future importance has been christened Napoleon City.

This company effected its first sale of ore a few days since, to an English House, which is represented in this city by Mr. William Shiels. The quantity sold was 100 tons, including, we presume, the lot now on Montgomery Street.—This ore is bought by assay, and will be shipped to Swansea, for reduction. The mines at Copperopolis, a few miles southerly from Napoleon city, are already well known, and have for several months past, been raising and shipping large quantities of very good ore. The ore thus far raised in California is supposed, by persons well versed in copper mining, to be of a quality quite inferior to that which will be found at greater depths than have yet been reached in any of our copper mines.

#### COPPER IN MARIPOSA.

Rich copper ore has also been recently discovered between Coulterville and the Merced river, in Mariposa county, which assays a very satisfactory percent of copper, besides a valuable percentage of silver and gold. A company, composed chiefly of Sacramento capitalists, with a capital of \$300,000, has already been organized to work the same. It is said that they will shortly have a hundred men at work upon the mine. The existence of this vein of copper has been known for several years, but serious attention was never attracted to it till since the late important copper developments in Calaveras county. There are no doubt many other known deposits of a similar character, in other parts of the State, which need only to be brought to the attention of parties properly versed

in copper mining, in order to lead to their early development. As we write we notice a paragraph in point in a late issue of the Nevada Democrat, which we condense as follows:—

#### COPPER MINING EXCITEMENT IN NEVADA COUNTY.

It seems that the vein was discovered about a year and a half ago on a ranch near the Zinc House in that county.—The owners had employed a man to sink a well on the ranch, who after going down a few feet, came upon a hard rock or mineral; he abandoned that place, and dug another well at a distance of fifteen or twenty feet from the first, where he struck the edge of the same vein and threw out a considerable quantity of the mineral. A specimen of the ore was brought to Nevada and assayed, and found to be rich in gold. The proprietors of the ranch took the vein, and in connection with others, worked it as a gold mine, but from some reason it would not pay, and the enterprise was abandoned. One of the proprietors afterward removed to Amador county, and seeing some of the copper ore there, was struck with its resemblance to the ore in his supposed gold mine. He wrote to his partner still on the ranch to send him a specimen of the ore, which was assayed in Amador, when it was ascertained that it contained a large percentage of copper. The Amador partner immediately returned to Nevada county and re-located the lead as a copper mine. These facts, says the Democrat, becoming known, numerous other parties repaired to the locality, where hundreds are prospecting, and locating every rock that looks as though it might contain copper. A number of veins have been found which evidently contain copper, and we shall soon know whether any of them are likely to prove of value.

#### THE DEL NORTE COUNTY COPPER MINES.

A party of scientific gentlemen recently visited this copper locality for the purpose of giving the recently discovered mines in that region a thorough examination. They returned on the last steamer from the North, fully impressed with a belief that the importance of the mines can scarcely be exaggerated. Among the number (we quote from the Herald of this city) was Mr. Price, a Welsh geologist and mineralogist, who recently came out to this country with Mr. Sheil, a shipper of copper ore for the English market. He has for many years been connected with the extensive smelting works at Swansea, and has therefore a practical knowledge of copper ore. He thoroughly examined the copper region and made more than one discovery of as great importance probably as any hitherto made. Mr. Price and his companions had every facility offered to them for investigation by the residents, and his opinion will not fail to have great weight with persons who are interested in property in Del Norte county. Mr. Stearns and other geologists of eminent ability have also visited the county, and they concur with Mr. Price in opinion.

The Panama brought 5,100 pounds of ore from the claim of the Excelsior Company, of which our fellow citizen, Mr. Fay, is President. Within a year from this time, Del Norte will be classed among the most valuable mineral regions of the world.

#### COPPER IN PLUMAS.

Some eight or ten months since a copper ledge was discovered by Messrs. Procter and Cooper, Genesee Valley, Plumas county. The ore, which is said to contain a large per cent. of copper, is very heavy, and somewhat resembles coal. A company has been organized for working the mine, and in another season works will be erected upon the premises. About 16,000 pounds of the ore have been taken out, which will be sent to Boston for the purpose of being tested.

#### COPPER SHIPMENTS.

The ship Regulator sailed from this port on the 21st ult., for Boston, with about \$30,000 worth of copper ore from the Copperopolis (Calaveras Co.) mines. Copper ore has now become a regular article of export from San Francisco. About half a million dollars, in value, from Calaveras Co., having already been sent forward. It is time that our Capitalists were casting about to devise some means for securing the business of extracting the metal from this ore within our own State. Present appearances indicate that the supply will soon be sufficient to warrant the necessary outlay of capital for the erection of works and concentration of skill, which shall make California independent of the world in this particular.

#### Mining Stock Report.

SAN FRANCISCO, Dec. 5th, 1862.

There has been more than usual animation manifested in the Mining Stock Market during the past week. The leading shares have advanced heavily and low priced stock has changed hands very freely.

Ophir continues to steadily advance. Sanborn's Circular quotes one sale of 60 shares (4 feet) at \$3,500 per foot, 15th January. Sales have varied during the week from \$2,500 to \$3,500 per foot—a wide margin for a well established, dividend paying stock. Buyers are still basing their operations somewhat on the expected dividends for last month. 477 shares changed hands last week.

Gould and Curry is steadily advancing. The quotations for the week have run from \$2,500 to \$2,550 per foot—\$2,700 is generally asked. One sale of 20 shares is quoted in the Circular at \$2,500. It was sold at the Board for \$2,525. There are more purchasers than sellers in the market. California is quoted at \$1,100. No transactions. Market quiet.

Chollar still rests quiet, with small sales at slightly advanced rates from previous quotations. It is firm at \$275—\$280 asked. Sales have been made at \$280.

Potosi has been but little enquired for. Small transactions are quoted at from \$75 to \$80—an advance of \$10 over previous quotations.

North Potosi is quoted at \$8—offered at \$10.

Sierra Nevada is quoted at from \$75 to \$80. 140 shares changed hands last week.

Danely is quoted at \$100 bid—200 asked. A slight falling off.

Burning Moscow. But little has been done in this stock during the past week. Sanborn's Circular quotes it at from \$60 to \$65. It sold at the Stock Board, on Tuesday, for \$67. Important improvements at this mine, elsewhere alluded to, will probably soon exert a favorable influence on its stock. Mount Davidson is selling for \$5 50—\$6 asked. A slight advance.

Meredith is quoted at \$15 to \$20—a slight advance.

Burnside is quoted at \$25 to \$30—An advance of \$5 over last week.

Iowa quoted at \$140 to \$150. An advance of \$10 per foot.

Norton quoted last week at from \$12 to \$15, has since been sold at from \$25 to \$30—an advance of 100 per cent. A paragraph in another column, in relation to this mine will fully account for this sudden advance.

Sacramento is quoted at \$25—\$35 is asked.

Hazel Green is mentioned in the Territorial Enterprise, Nov. 28th, as entirely without demand, with a large amount of stock in the market. The latest sale was Nov. 21st—50 feet at \$3 50.

Lucerne is quoted from \$5 to \$8.

Hale and Norcross is quoted at \$250 but \$275 asked. No sale reported.

Rogers quoted at \$22½ bids—\$25 asked. \$5 assessment.

Lady Bryan \$3 bid—no sales at stock board.

#### Washoe Report.

Speculators have been for some time lying back for men of small means to freeze, by the approaching winter, into selling their "feet" at small figures. The continued mild weather, however, has thus far sadly interfered with their calculations. The biters are in a fair way of getting bit. As a consequence stock transactions have recently been small and slow.

The Enterprise, in its stock report of Nov. 26th, says:—The controlling interest in several outside claims, we are informed, has been quietly bought by capitalists in San Francisco, who intend to perfect a speedy development of these mines.

The same paper of Nov. 28th says:—The Santa Rita, have brought suit against the Cole Company for purpose of silencing the dispute against their title. The stock of this company is held firm at \$50 per foot, without sales. With an unclouded title, the stock would read at much higher figures.

The Sacramento have sued some eight different companies on Cedar Hill to quiet title. This company to-day shipped a couple tons of first class rock from their mine to San Francisco, in order, they say, to fairly test its richness. The Enterprise intimates that this transaction is mors for display than any real profit which the company could hope to gain by transporting their ore so great a distance for reduction.

Bald Eagle—40 feet reported sold on the 25th ult. for \$4 per foot. Oriental—25 feet sold at \$4 per foot. A large portion of this Company's stock is reported to have changed hands recently at about this figure.

Ashland is enquired for at \$8—\$10 is asked.

Nevada is enquired for at \$7.

The Enterprise's Stock Remarks of Nov. 22 says:—The Ironsides Company (formerly Vermilion Company) are reported to have struck rich rock in their tunnel. Several sales have taken place to-day in that stock at \$5 to \$7 per foot.

Burdell—last quotation, some ten days since, report 15 feet in this company sold at \$15 per foot.

Blomington at \$5.

Cedar Hill Consolidated is enquired for, and could be sold at very low figures—Cedar Hill Tunnel was last offered at \$6.

#### Emerald Stocks.

The Wide West is still advancing, and is quoted at from \$400 to 405.—\$450 is generally asked. This stock has improved about \$20 during the week.

Antelope is quoted at \$70—with \$85 to \$100 asked.

Atlas is quoted at \$5 and \$8 is asked.

Silver Hill is not quoted this week.

Utah has no buyers—held at \$40.

Real Del Monte quoted at \$12 with \$15 asked.

#### Coso Stocks.

The Josephine, Coso and Willow Springs are the best known Stocks in this district—but no recent transactions have been made in either of them.—The former is held at \$20. No offers are quoted for either of the others. The Josephine had bidders, the past week, at the Stock Board at from \$15 to \$16.—Holders asking \$20 to \$21.

Coso—No bidders at the Board—\$20 asked.

Willow Springs—no bidders—\$35 asked.

#### Mexican Mines.

St. Nicholas Silver Mining Co. is quoted by Sanborn's Circular at \$100.

Mina Prieta finds no recent buyers, but is held at from \$110 to \$130.

Dios Padre is held at \$45 50.

### The Ophir Company.

At a meeting of the Stockholders of the Ophir Company held at their office, on the 26th ult. it was decided, conditionally, to purchase the interest of the Virginia Company in a vein located a short distance above the Ophir or Comstock vein. The amount agreed upon, we understand, is \$100,000—to be paid in monthly installments of \$20,000.

The Virginia Company, located a few feet above, it will be recollected, have recently set up a title adverse to the Ophir the precise nature of which we have not learned. Whether this claim is considered of any account by the Ophir Company, we know not, but presume that that Company has been, in part, induced to make this amicable arrangement from the fact that whatever the decision might be, at present, another difficulty might arise in the future from the great probability, that as the two claims are dipping toward each other, they may eventually come together. A very perplexing question would then arise as to who held the true vein—as it could not in that case belong to both. Undoubtedly the vein which should be found continuous in dip would be considered, in law, the true vein. The danger to be apprehended is, that under such a decision the Ophir might be the loser. Hence the apparent propriety, of coming to an amicable and full decision in the matter at once, especially when it can be done by the payment of the moderate sum named above.

### Washoe Items.

We condense the following items mostly from the *Territorial Enterprise* :—

**BURNING MOSCOW.**—The Burning Moscow, says the *Territorial Enterprise*, are making extensive preparations for working this mine in an economical and systematic manner. A house has been erected some distance above the mouth of the tunnel in which their engine and hoisting machinery will be put up. Their engine, hoisting apparatus and a large pump are now on the ground. An incline has been commenced in the west end of the new building which will be driven down into the lowest portion of the mine as soon as the hoisting machinery is in readiness for use. They are now going to work in the right manner to work their claim to make a mine of it. A company may dig a tolerably deep and very ugly looking hole, and may for a time keep the water out of it and raise some ore, with no other machinery than a bucket and windlass, but when mining is to be done science, system and machinery are demanded.

**THE NORTON COMPANY.**—The Virginia City Union says the Norton Company have just struck their lead after running a tunnel twenty-five feet into Cedar Hill, and sinking a shaft twenty-feet in depth from the end of the tunnel. Their lead is about four feet in thickness, and the quartz, of a honey-combed variety, is literally studded with pure gold. Very little, if any, silver has been found in it, as yet; but the amount of gold visible is large. Stock in this company has advanced the past week from \$15 to \$30 per foot.

**MALDANADO LEAD.**—The company working this lead, situated west of C street, between this place and Gold Hill, are taking out and heaping up ore which the Spaniards in charge say will pay for crushing. The ore is of a rusty, red appearance re-sembling, in many respects that of the Gold Hill mines. The Bachelor company, adjoining the Maldanado on the south have completed the building commenced by some two weeks since, over their incline, and are now preparing to erect their hoisting machinery, etc.

**MOUNT DAVIDSON TUNNEL COMPANY IMPROVEMENTS.**—The Mount Davidson Tunnel Company are erecting a building at the mouth of their tunnel, just south of where the new Gould & Curry ore house is to be erected. The building is intended as a work shop and tool house, also to shelter the mouth of the tunnel from the storms and drifting snows of winter.

**WATER.**—In early times the great fear of those erecting mills on the various canons of this region, was that they would not afford sufficient water during the Summer and Fall months for the numerous requirements of the works. Every year the volume of water flowing in the ravines has increased. Plenty is now running through all the canons on which mills are located to meet every requirement, and we hear no more of the water bugbear.

**SPANISH NO. 2.**—This company have set up their engine and are very nearly ready to commence the work of hoisting the water from their shaft. They are about ready to commence with their steam hoisting and bailing apparatus.

**PHOENIX CONCENTRATING COMPANY.**—This company are still in full blast at their place midway between here and Gold Hill. They have some six or eight men at work at shoveling the ore into sluices, attending the concentrators, assorting, etc. Some seventy five or a hundred tons of this concentrated ore was ready for removing to the mills yesterday, when we visited the works.

**GENIUS TRIED AND TRIUMPHANT.**—This Play, recently from the pen of our talented California author, Rev. Dr. H. BREN, of this city, is to be produced on the 11th instant, at the American Theater. The plot, incidents, language and novelty of this play will create a reputation for the author that will compare favorably with the most celebrated writers of modern drama. The best available talent has been engaged for the season, and we trust our readers and citizens will pay a just tribute to our Reverend friend who is in every way deserving.

**HOW TO TEST SILVER ORE.**—Pound a small quantity of the rock supposed to contain the metal, as fine as possible, then place it on a shovel, or anything handy, and hold it over a slow fire, to burn away sulphur or arsenic, which are generally mixed with the ores of silver. Then take a cup, or any glass or earthenware vessel, into which pour a small quantity of nitric acid (aqua for is,) in which put about a teaspoon full of the powdered ore, which boil in the acid for a minute or two. Then take some common salt, dissolved in water, in another vessel; pour a small quantity of the salt and water into the acid; if it turns white and looks milky, there is silver in the ore. The above is a cheap, convenient and certain test for silver.

We have given, in another column, a full description of the newly discovered Grass Valley Silver Mines, and the result of the first "clean up" from their mill. This, we believe, is the first silver mill which has been fitted up on the Western Slope, but, we trust, will be the precursor of hundreds. It has already pretty clearly demonstrated one highly satisfactory result—that silver ore can be found about Grass Valley, in paying quantities. Having until recently been a resident of that town for some eight years, we know enough of the energy of her citizens to trust them for the future energetic prosecution of this new branch of mining, and feel the utmost assurance that no effort will be spared to make the most out of this present development, as a stepping stone to future researches for more of the same kind of mineral.

### Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

### PROSPECTUS TO THE PEOPLE OF THE STATE OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hitherto from England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our Government—to marine conveyances—the merchant—the manufacturer, the mining companies and professional companies, cannot but be beneficial, provided the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports, exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Pre-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have we the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

"He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils; also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay at the service of our people before our people through the Mining and Scientific Press, and the work he hereby offers. But the most important subject in his mission is the inducements he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the counting house, to the professional man and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

**RECENT PATENTS.**—Granted to CALIFORNIA INVENTORS through the Pacific Agency, J. SIEVERSMITH, Solicitor:

E. E. MATTESON, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

ELANDER HEATH, San Francisco, *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

G. F. DEETKEN, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

### Routes and Fares from San Francisco to Foreign and Domestic cities.

*Pacific Mail Steamship Company*—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

*Nicaragua Steamship line*, Ross, Dempster & Co., agents. Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

*California Steam Navigation Company* dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petaluma, \$3.

*Overland Mail Company*—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

### THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hackneyed course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone." "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who congregate there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE.—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

PACIFIC MAIL STEAMSHIP COMPANY'S line to PANAMA  
connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company, at Aspinwall.

FOR PANAMA,

The following Steamships will be dispatched in the month of December 1892  
Dec. 1st—St. LOUIS, Captain E. S. Farnsworth,  
" 11—GOLDEN AGE, W. H. Hudson, Commander.  
" 21st—SONORA, W. F. Lapidge, Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama  
AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York  
For freight or passage, apply to

FORBES & BABCOCK, Agents,

Corner of Sacramento and Leidesdorff sts.

OPPOSITION

People's Line to New York.

ROUTE CHANGED FROM NICARAGUA TO  
ISTHUS OF PANAMA.

Through in Twenty-one Days!!!

FIVE DAYS AHEAD OF THE MAIL.

The fast and favorite Double Engine Steamship

MOSES TAYLOR, 1,500 tons,

E. HOWES ..... Commander.

Will be dispatched for

PANAMA,

From Mission street Wharf.

Punctually at 9 o'clock A. M., of

THURSDAY, ..... DECEMBER 11, 1892,

Connecting at Aspinwall by the Panama Railroad,

And thence by the Splendid Steamship.

AMERICA,

2,000 Tons.....JEFF. MAURY, Commander.

The America has proved herself the swiftest Steamship afloat, and in comfort, cleanliness and regulation is incomparably superior to any other running to Aspinwall.

The Moses Taylor is known to be the fleetest ship on the Pacific, and passengers may confidently anticipate making the through trip in 22 days, as obstructions which are said to have been thrown in the way of passengers, by the Nicaragua Government, cannot possibly occur on this route.

THE PEOPLE'S LINE

Has been established to meet the universal demand for an

OPPOSITION,

And every Californian should give it a preference for the public good, as well as his own private advantage, which will be secured by

Reduced Fare, Good Accommodations, and Quick Trips.

This line is intended to be a permanency, and is not put on for the purpose of being thought or driven off. Speed, safety and the utmost comfort of passengers are the main objects. To secure these no merchandise freight (other than specie) will be taken. The MOSES TAYLOR is built with Water-Tight Compartments, and is unequalled for safety as well as speed.

For information or passage apply to

I. K. ROBERTS, Agents,  
425 and 427 Battery street.

LABOR-  
SAVING

Rock Drilling Machines.

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRYMEN. The subscriber, Patentee and Agent for GARNER'S PATENTS, will continue to receive orders for

HAND, HORSE, AND

STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to  
oc7-3m]

WM. W. DUNN,  
Fromont street, bet. Market and Mission, San Francisco.

F. G. BEPLER,

PRACTICAL COPPERSMITH,

No. 118 (Old No. 22) Bush street,

Between Sansome and Battery,

SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work.

All orders from the country promptly attended to.

je6

V. SQUARZA'S

PUNCH FACTORY.

WE PRESENT HEREWITH THE PORTRAIT AND TRADE MARK OF  
the gentleman who heads this article. Mr. Squarza is favorably  
known in this State for his Anti-Divorce Liqueur and similar productions, as  
manufactured by him. We may mention that Mr. Squarza is an aid in the  
chemico-distilling science, hence the celebrity of his articles. He has two  
establishments for the sale of his famous Punch—one on Leidesdorff,  
the other on Montgomery street—which are constantly thronged with our  
bon vivants.

The following is a list of his liquors, all of which we have tasted, and find  
them the most delicious and harmless beverages in this city, being pure,  
and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser,
Arac do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Coca do.	Anti-Dyspepsia Bitters,
Coffee do.		Appetiser,
Tea do.	Morning Comfort,	Ladies' Tears.
Pineapple do.	Kuennel,	

And CHAMPAGNES of all brands.

Dr. Van Zandt,  
Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity!  
Made Subservient for the Cure of all Nervous  
and Spinal Diseases.

THAT THIS PRINCIPLE, successfully applied to diseased states  
of the system, is to prove the great sought-for necessity, long wanted  
by physicians, to add their medicines in overcoming organic and functional  
derangements of the human body. It is a part of the great principle of vitality  
known as nervous influence and necessarily must have much to do in  
obviating diseased action.

Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium  
of the ELECTRIC principle; and should this secret and hidden equipoise  
of health be broken or lowered—should the body be negatively electrified  
when it should be positively charged—is not the current broken, and  
is there not a war of forces going on in our system? This needs correcting,  
and in order that the tissues of the body should be susceptible to remedial  
agents we must first restore and

Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly  
in this great magnetic or electrical intensity of the earth, with its influence  
upon our bodies in health and disease, I am led to take advantage of the  
press, through which to awaken attention to the subject, that good may  
come to all.

No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life  
blood, render the stomach, liver, heart, kidney and all the natural functions  
active by ELECTRICAL excitation, and at once the aged, the palsied,  
the nervous, the dispirited, the melancholic, the dyspeptic and the invalid  
revive under its benign influence.

To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and  
office practice, is owing to his correct views of the origin of all their mal-  
adies. Ladies can consult him with entire confidence, as he is no speculator  
upon human ills—but is proving himself the only member of the legitimate  
profession in California who is really successful in removing those ills which  
are the peculiar province of the sex. His high appreciation of their deli-  
cately attuned nervous organism, together with their great sympathetic  
life, renders him doubly able to assuage those silent complaints which  
they bear so patiently and so long. No social disquietude need longer  
afflict our home circles; for he can arouse the stricken energies; restore the  
wonted tenacity of the body; awaken the melancholic and desponding; arrest  
those drains which cause so much anxiety; cure those protean mal-  
adies which have so long

Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at  
the stomach, wandering pains, wasting away of strength; extreme debility  
and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that  
general depression of life's powers, which go to render her life a misery  
and death a boon. Dr. Van Zandt, with his new method of exciting the  
Electro-Galvanic current, together with his remedial measures which are  
adapted to the necessities of California, will assure you of a complete and  
radical recovery of all bodily and mental infirmities, and will restore you  
to usefulness, and spare you a blessing to your family and to society.

All the World Over

wherever disease exists, whether special to the soil and climate or com-  
mon to all regions—epidemic or casual, acute or chronic, contagious or non-  
contagious—it is as necessary to restore the ELECTRO-GALVANIC equilib-  
rium, especially in California, as it is to give food to the starving. This  
statement is based upon a series of facts extending through many years, and  
verified by hundreds of patients; so that no principle of science, no rule of  
experience, no result of any well known cause, rests upon more sure and  
unassailable foundations, than those which underlie the world-wide reputa-  
tion of Electricity for the cure of all nervous states of the body, faulty di-  
gestion, mental and physical debility or prostration, coughs, asthma, wander-  
ing pains of a rheumatic, gouty or mercurial character, and all forms of  
disease, the result of scrofula or cankerous habit of body,

None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—  
melancholy which you cannot shake off—loss of power which you cannot re-  
gain—depression of spirits which weigh you down—wakefulness that knows  
no sleeping—business that languishes for want of energy—a void which no  
society can fill—suspicion which no assurance can allay—Go to Dr. Van  
Zandt, for his great success, and the safety with which he administers his  
new method of Electrical excitation, together with his remedies, which are  
adapted to the requirements of climate and constitution, will assure you a  
radical removal of all bodily and mental infirmities, within the scope of  
science and man to remove.

The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt  
has made these affections an especial study, and that he is the only Sur-  
geon on our State, who has a diploma for that branch of practice. Very  
many of the eye and ear troubles are purely deranged nervous actions, and  
are cured by his electro-galvanic battery—as amaurosis, squinting, cata-  
ract, floating specks before vision, twitching of the eyelids, nervous deafness,  
roaring and buzzing noises in the ears, giddiness, etc. All operations suc-  
cessfully done on these delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29—3m

FREDERICK KESMODEL,  
Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September,  
1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one in-  
terested, is called to his new method of fitting and adapting Trusses to the  
different cases. It is a well known fact that there has as yet been no system  
of fitting Trusses. There are many different styles which have proven good  
in many cases, but they are all uncertain and cannot be relied on, and in  
severe cases are altogether useless. The following are some of the advan-  
tages I claim for these Trusses above any and all others: First—The Pad is  
formed on the parts to be compressed by taking a plaster cast. Second—  
Having a correct model, it enables me to make the Pad of any desirable  
material, such as horn, ivory, etc. Third—The Pad is so adjusted to the  
spring that movement of the body will move or displace it. There are  
many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,  
Inventor and Patentee.

ap8 tf

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts " "  
 " " 750-1000ths to 950-1000ths " 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts. " " "

## DEPOSITS FOR FINE BARS

\$1.16-4-11ths cents per standard ounce,  $\frac{1}{2}$  per ct gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1.21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1.16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1.16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

## READ THIS!

**COAL OIL EXPLOSION.**—ON SATURDAY EVENING, WHILE MR. BREWSTER was engaged in the Summer street House in pouring coal oil from one can to another, his wife imprudently approached with a lighted candle and the oil exploded. Mrs. Brewster's arms were badly burned, as were also the husband's hands. However, he succeeded in mastering the flames, and preventing worse consequences.—[Evening Bulletin, Aug. 4.]

## THEN THIS!

## COMET ILLUMINATING OIL!

Manufactured expressly for Stanford Bros.

THIS POPULAR

**BRAND OF KEROSENE**

Is warranted free from Camphene, Petroleum, or any other explosive material, and is the

**Best Family Oil in the Market**

STANFORD BROTHERS,

Nos. 121, 123 and 125 California street.

## 50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandeliers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE.—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil; if a lighter color is wanted, mix less paint, more lead.

ROOF.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

Old Stand, corner of Bush and Market Streets.

Opposite Oriental Hotel, San Francisco, Cal.

LEWIS COFFEY

J. N. RISDON

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

A Circular containing further information, and a synopsis of the Patent Laws of various countries, will be furnished on application to J. Silversmith, Government House, San Francisco.

Miners, Inventors, Agriculturalists, Capitalist and Mechanics, will find it to their advantage to subscribe for the MINING AND SCIENTIFIC PRESS—being the only journal of that class published upon this continent. Issued every Saturday at four dollars per annum.

Address, J. SILVERSMITH,  
SAN FRANCISCO.

CORNS AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia, and also the people of the State of California, of the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we commend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

We subscribe ourselves yours,

Rev W Stanton, L L D,  
Richard A Vaux,  
Dr Straud, M D,  
Dr Lewis, M D,  
Cleopie Stevens, M D,  
Samuel Panoast, M D,  
Walter C Foster, M D,

S W Howard, Att'y at Law,  
Pierce Butler,  
Henry B Linton, M D,  
Wm L Howard, M D,  
Phillippe Lidy, M D,  
Myers Davis, M D,  
W M Thompson, M D, and others.

No. 716 Catharine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skillful surgeon.

MRS. J. W. HAMMOND.

VOL. VI. SAN FRANCISCO, SATURDAY, DECEMBER 13, 1862. NO. 7.

#### Practical Information for Mineral Prospectors.

Every working miner, and especially every "prospector" in California, should have some knowledge whereby he may be enabled to arrive, at least, to an approximate idea of the nature and value of the various descriptions of ore which are constantly coming under his observation. To neglect this suggestion is to ignore one of the most important advantages which even the commonest laborer, in this state, has of securing, at some opportune moment, a sudden and ample fortune. Very few persons, in this state, will read this article without calling to mind some person, who, to their knowledge, has, for the lack of the very information contained in this article, actually lost an opportunity of enriching himself.

In our last issue we gave a very simple, yet generally reliable acid test by which the presence of silver in any ore may be readily ascertained. For the convenience of those who may wish to preserve the two, we have reproduced it at the conclusion of this article. We now proceed to give some general instructions by which almost any person may use the common blow-pipe, with very satisfactory results, in all ordinary cases, such as will be likely to come under the notice of the California prospector. These instructions have been carefully prepared by a gentleman of large scientific attainments. In all ordinary cases, the rules here laid down may be implicitly depended on, but in complicated cases, where the assay gives uncertain results, proportionate caution should be employed both in operating and deciding. In cases of an extremely doubtful nature, and for final conclusions, previous to the outlay of large expense, resort should always be had to a practical and competent assayer.

In our next issue we shall give a simple method by which the amateur operator may ascertain, with a very great degree of exactness, the proportion of mineral contained in any given quantity of ore presented for assay.

"The miner will commonly judge a mineral to be metallic, if it has a metallic aspect, or if it feels particularly heavy in the hand; but others also discover metallic properties to the blowpipe by:—

1. Yielding a bead of metal to the reducing flame, on charcoal, which is facilitated by the addition of soda.
2. Passing off in vapor, more or less dense.
3. Attracting the magnetic needle, after heating in the reducing flame on charcoal.
4. Coloring borax strongly, either on charcoal or pipe-clay.

"When a metallic bead is produced, it may be pure silver, tin, lead, bismuth, copper, gold, or iron, copper, nickel, or cobalt, alloyed with arsenic, or a mixture of various metals. Gold and silver may be distinguished by not losing their brilliancy in the outer flame; tin by its whiteness and softness; lead and copper are immediately distinguished by their color; and bismuth by fuming and evaporating in the reducing flame. The arsenical alloys and compounds, not clearly distinguishable by these means, nor by their streak upon the black flint, must be examined by fluxing with borax. If it give green or pipe-clay, it is copper, though it happened to be bleached by the arsenic. If blue, it is cobalt. If orange, yellow while hot, and the color fly on cooling, it is iron or nickel; and these are distinguished by their reducing flame on charcoal, where the borax bead is bottle-green with iron, but almost colorless with nickel. If the metal yield no bead, but pass off in vapor, it is quicksilver,

arsenic, antimony, bismuth, or possibly tellurium, cadmium, or zinc. If the vapor smell strongly of garlic, it is arsenic. If it leave a circular halo on the charcoal, it is antimony, tellurium, bismuth, or cadmium. If the halo be white, it is antimony. If orange-yellow, it is to be subjected to the reducing flame. If it disappear easily, tinging the flame green, it is tellurium. If it evaporate with difficulty, and without tinging the flame, it is bismuth. If it be red or orange-red, it is cadmium. If the mineral evaporate readily with no odor, or only that of sulphur, and without leaving a white or yellow halo, it probably contains quicksilver, which is proved, if on mixing a portion of it with soda and iron filings, heating it on charcoal, and holding a bit of gold coin in the vapor, the quicksilver show itself on the coin. If using soda with the reducing flame, the assay burn after a while with a pale green flame and white smoke, covering the charcoal with a white flaky powder, it contains zinc. If it will neither yield a bead of metal or volatilise, but attract the magnetic needle after the operation of the reducing flame, it most probably contains iron; but it may be nickel or cobalt—easily distinguished by fluxing with borax. If the mineral, or the residue, after part has evaporated, will neither yield a bead, volatilise, nor attract the magnetic needle, we have then to flux it with borax, and the following table will show what it contains:

If it stains the borax,		The metal is
In the reducing flame, on charcoal.	In the cacinating flame on pipe clay.	
Blue .....	Blue .....	Cobalt .....
Bright Green .....	Colorless .....	Chrome .....
Colorless or reddish .....	Bluish Green .....	Copper .....
Bottle Green .....	Orange, while hot, paler as it cools .....	Iron .....
Pale .....	As iron .....	Nickle .....
Dirty green .....	Yellow .....	Uranium .....
Purple .....	Colorless .....	Titanium .....
Colorless .....	Purple .....	Manganese .....

"Copper is reduced in the metallic state in the reducing flame; and hence, when in quantity, shows itself in its usual red color in the bead.

"In mixtures of metals the indications are sometimes ready enough. If on pipe clay, we find the borax tinged between orange and purple while hot, and becoming purple in cooling, whilst it gives a bottle green on charcoal, we immediately perceive the indications of iron and manganese—a very common mixture. If, again, we find it bright green on pipe clay, and emerald green on charcoal, a mixture of chrome and copper is indicated. But it more frequently happens that mixtures of metals give ambiguous results, and that they can only be ascertained by caution and perseverance.

"Although most of this is sufficiently easy, it requires a little practice; and, to give the operator confidence in his results, this is best performed upon substances which he knows to contain the metals he assays for. Thus, if he operate on common mundic, he is certain, after a sufficient time of roasting and heating on charcoal, to obtain a residuum capable of affecting the magnetic needle. White mundic will leave the same residue, after giving off an arsenical smoke. Green copper (malachite) will be sure to yield a bead of copper on charcoal, and will as certainly produce a fine green with borax on pipe clay. Any of the ores of a lead may be promptly reduced to a metallic bead on charcoal.

"The vapor of antimony may be easily distinguished from that of arsenic, by the garlic odor of the latter. A minute particle of manganese will tinge borax a fine purple or pipe clay, in the outer flame: but on charcoal in the blue flame, a much larger portion, dissolved in borax, will become limpid and colorless. A particle of titanium ore will give an oppo-

site result, bleaching on the pipe clay, and becoming purple on the charcoal.

"The experimenter should also not fail to reduce tin ore by the aid of soda, and some ore of zinc by the same means, that he may become acquainted with the appearances in these assays. Thus varying his practice as materials happen to fall in his way, he will quickly acquire familiarity with the appearances and results, and feel confidence in any assay he may undertake.

**HOW TO TEST SILVER ORE.**—Pound a small quantity of the rock supposed to contain the metal, as fine as possible, then place it on a shovel, or anything handy, and hold it over a slow fire, to burn away sulphur or arsenic, which are generally mixed with the ores of silver. Then take a cup, or any glass or earthenware vessel, into which pour a small quantity of nitric acid (aqua fortis,) in which put about a teaspoon full of the powdered ore, which boil in the acid for a minute or two. Then take some common salt, dissolved in water, in another vessel; pour a small quantity of the salt and water into the acid; if it turns white and looks milky, there is silver in the ore. The above is a cheap, convenient and certain test for silver.

**THE TALLOW TREE.**—Among the trees which have of late been extensively distributed in the northwestern provinces of India and Punjab is the tallow tree of China—*Shillingia sebifera*. In China it is largely cultivated, and it is said that by its produce alone the taxes are paid in the district of Hong Kong. It grows equally well on low alluvial plains, or the rich mould of canals, in sandy soils, and on the acclivities of mountain. From its seeds tallow and oil are procured, which are extensively used in China. Its wood is hard and durable, and its leaves yield a black dye. It is now thriving well in India. The tallow and oil are easily procured from the seeds. The tree, therefore, is well worthy of attention.

**GIGANTIC IRON CASTINGS.**—Referring to the huge anvil block, weighing from 35 to 38 tons, cast by Messrs. Fawcett, Prestor & Co., Liverpool, for a steam hammer, to melt which two air-furnaces and two cupolas were engaged, the quantity of iron melted being 40 tons—the time required to cast, from opening the furnaces, being less than a quarter of an hour, a correspondent of the "Journal of the Franklin Institute" says: "This was a heavy undertaking, and doubtless the large number of ladies and gentlemen who assembled to witness the operation of casting were highly gratified at the beautiful spectacle. In a mechanical point of view, however, the casting of a similar piece at the Port Richmond Ironworks, Messrs. I. P. Morris, Towne & Co., on July 1, shows a much greater capacity for doing this description of heavy work. The block weighs 31 tons, and to pour it 37½ tons of metal were melted in one cupola in four hours from the time the blast was put on. The quantity of air used in the blast was 4,000 cubic feet per minute. The coal consumed was 1 lb. for each 9 lbs. of iron melted. The mould was filled in four and a half minutes pouring. The work was done with the ordinary resources of the establishment, and without any display or assemblage of visitors."

**GOING UP HILL.**—The *Enterprise* says that people are going up hill in Virginia City—climbing up the sides of Mount Davidson and Mount Ophir to stake off and fence building lots. However high an individual may have set his stakes, another is always found ready to drive pegs a rod or two higher. Proceeding upon this plan what is to prevent people from going with household goods to the highest peak of Mount Davidson.

## California Manufacture of Turpentine and Rosin.

A firm in Marysville have recently commenced the manufacture of the above articles. They have 8000 trees in the foot hills, and are now engaged in tapping them. They calculate on an average yield of about 300 gallons of turpentine and 60 of rosin per week, from the above number of trees upon which they propose to commence operating. The recent advance in the price of these articles will no doubt render their manufacture in this State a very profitable business for some time to come, and as very little capital is required to go into the business we see no reason why large quantities may not be made in this State—sufficient not only for our own consumption, but also for exportation.

## HOW TURPENTINE IS PRODUCED.

In the above connection we clip the following interesting article on the produce of turpentine, from the Oregon Farmer:—

The immense forests in North Carolina, which cover the sandy ridges between the swamps and water-courses, consist mostly of the long-leafed pine, *Pinus palustris* of the Southern States. From them is gathered one of the great staples of North Carolina—the turpentine. And although this product and its derivatives are, in our country, almost in as common use as bread and meat, very little is known of the manner of procuring them. We will therefore endeavor to describe it accurately: These trees at maturity are seventy or eighty feet high and their trunks eighteen or twenty feet in diameter near the base. They grow close together, very straight, and without branches to two-thirds of their height. Overhead, their interlocking crowns form a continuous shady canopy; while beneath the ground is covered with a thick, yellow matting of pine-straw, clean, dry, level, and unbroken by undergrowth. The privilege of tapping the trees is generally farmed out by the land owner, at a stated price per thousand, say from twenty to thirty dollars. Under this privilege the laborer commences his operations. During the winter he chops deep notches into the base of the tree, a few inches from the ground, and slanting inward. Above, to the height of two or three feet, the surface is scarified by chipping off the bark and outer wood. From this surface the resinous sap begins to flow about the middle of March, at first very slowly, but more rapidly during the heat of the summer, and slowly again as winter approaches. The liquid turpentine runs into the notches, or boxes, as they are technically called, each holding from a quart to half a gallon. This as it gathers, is dipped out with a wooden spoon, barrelled, and carried to market, where it commands the highest price. That which oozes out and hardens upon the scarified surface of the tree is scraped down with an iron instrument into a sort of hod, and is sold at an inferior price. Every year the process of scarifying is carried two or three feet higher up the trunk, until it reaches the height of twelve or fifteen feet—as high as a man can conveniently reach with his long handled cutter. When this ceases to yield, the same process is commenced on the opposite side of the trunk. It is estimated that one man will dip ten thousand boxes.

The produce is carried to market on a sort of dray or cart which holds but two barrels, consequently the barrels are always seen setting about in the woods in couples. The trees at length die under these repeated operations. They are then felled, split into small sticks, and burned for tar. The dead trees are preferred for this purpose, because when life ceases, the resinous matter concentrates in the interior layers of the wood. In building a tar kiln, a small circular mound of earth is first raised, declining from the circumference to the center, where a cavity is formed, communicating by a conduit with a shallow ditch surrounding the mound. Upon this foundation the split sticks are stacked to the height of ten or twelve feet. The stack is then covered with earth as in making charcoal, and the fire applied through an opening in the top. As this continues to burn with a smouldering heat, the wood is charred, and the tar flows into the cavity in the center, and thence by the conduit into the ditch, or into vessels sunk to receive it.

**IRON BRIDGES.**—The French will acquire quite a celebrity for iron bridges. The Orleans Company is now engaged in throwing one over the left bank of the Scorf, an arm of the sea which forms with the Blavet the port of Lorient. The bridge will have a length of 1,100 feet, and will be composed of ten arches in masonry, and three spans comprising altogether 576 feet. The metallic part will be supported by two piers, established on a rocky foundation, at a depth of sixty feet below the ordinary tides. When this great work is completed, the first portion of the Nantes and Brest Railway (that is, as far as Lorient) will be in a position to be opened for traffic.—*London Mining Mag.*

**THE SUEZ SHIP CANAL,** which is being cut through the Isthmus, to connect the Mediterranean with the Red Sea, will be 94 miles in length, 260 feet in width, and 26 feet deep. The work upon this gigantic enterprise is rapidly approaching a completion.

## California's Gold-producing Rival.

The Colony of Victoria, in Australia, must always have a peculiar interest for Californians. It is a great rival in the production of gold—our chief rival in the commerce and industry of the Pacific—the head of the British Anglo-Saxon Colonies on the Pacific, as California is of the Anglo-American States.

The first permanent settlement, in what is now Victoria, was made at Melbourne in 1835; but the population continued to be small until the gold discoveries in 1851, three years later than those of California.

The Australian gold fields differ much in character from ours, being mostly in deep diggings, where the hydraulic hose and sluice cannot be used to advantage, or where at least they are not employed so extensively as in this State. They were very rich at first, and for a time they turned out a stream of gold more abundant than that which flowed from the claims of California. But the auriferous deposits of Victoria appear to be approaching exhaustion more rapidly than ours. During the last five years, the decrease in production has been very rapid. By a comparison of the gold exports manifested during the first five months and a-half of the present year, with the corresponding terms of the seven preceding years we see an average decrease of eight per cent. annually. In 1855, the value was \$41,658,100; in 1856, \$29,484,005; in 1857, \$25,364,225; in 1858, \$23,860,815; in 1859, \$21,436,710; in 1860, \$18,648,155; in 1861, \$17,144,695; and in 1862, \$14,340,785. The total decrease from 1858 to 1862 is about sixty per cent. If the manifested exportation during the remainder of the present year be at the same rate as during the first five months and a half, the total exportation will be about \$30,000,000. Victoria imports more grain, provisions and manufactured articles generally than does California, but it produces wool, copper ore and several other articles of export in greater abundance; and the proportion of the amount of gold sent away and manifested to that produced may be about the same in the two countries.

The amount of land cultivated is 430,000 acres, one half the amount in this State. Two-fifths of the title land is in wheat, one-fifth in oats, one-fifth in hay and green forage and 1,400 acres in vines. The average wheat crop this year was 18 bushels per acre; of barley, 18 bushels; and of oats, 23 bushels; of wine, 300 gallons.

The population of Victoria on the 1st of March, 1862, was 544,046, of whom 322,346 were males, and 221,700 females. The number of aborigines is less than 2,000. Of the total number, 138,000 were born in Victoria, 169,000 in England, 87,000 in Ireland, 60,000 in Scotland, 24,000 in China, 19,000 in other Australian colonies, 2,554 in the United States, 10,418 in Germany, and 1,250 in France.

The rate of wages is less than in California. Journeymen carpenters, masons, bricklayers and blacksmiths, get from 8 to 11 shillings (\$2 to \$3) per day, and pick-and-shovel men 5 to 6 shillings. House servants are usually hired for long terms. Female cooks receive from £35 to £50 (\$175 to \$250) per year, general servants £25 to £30, and nursemaids from £16 to £25.

## Weather Prognostics.

Rules for foretelling the weather have prevailed for a long period. There are allusions to them in the scriptures. "When it is evening ye say, It will be fair weather for the sky is red. And in the morning, It will be foul weather to-day for the sky is red and lowering." (Matt. xvi. 2, 3)—Some of the early poets give various weather signs. Virgil (Dryden's translation) says:—

"Wet weather seldom hurts the most unwise,  
So plain the signs, such prophets are the skies."

A Greek poet by the name of Aratas, is said to have written a poem of 417 lines, on weather prognostics, upward of two thousand years ago. From extracts translated into English which we have lately met with, it appears that some of the weather signs by which we are now guided, are mentioned in this ancient poem. For example:—

"Examine attentively when the sun rises and sets. Do you not see the perihelion shine north or south, or even at both of these points at the same time? Beware of neglecting this observation; for when this phenomenon shows itself, evening or morning, at the moment when the sun touches the edges of the horizon, it is a sign that the great Jupiter is going to send us tempests."

The phenomenon alluded to is popularly called "sun-dog" in this country, and is generally thought to indicate stormy weather. According to Aratas—"It is also a sign of rain when a cluster of stars appear indistinct as one. When the heron flies swiftly to the coast, with great cries, it is a sign of coming tempests; and also when sea-ducks and other aquatic birds rise in the air. When the clouds extend themselves, rise, and cover the sky with a grayish veil; when we see in the air a double rainbow; when the rays of any star lose their brilliancy, we may expect rain."

Of signs to be drawn from the animal creation he says: "Often when it is going to rain you will see aquatic birds dip, and dip again, incessantly; you will see the swallow flutter around the banks, balance itself upon the waves, and, skimming the water with a light wing, dare at last to bathe

in its plumage. The importunate voice of the frog will be heard with more power from the midst of the marshes; the melancholy cry of the solitary owl startle the morning." Again, he writes; "The ravens and the jays foretell rain when we hear them, in large bands together, counterfeiting the voice of the sparrow-hawk."

On the whole, probably there is but little new under the sun, in regard to foretelling the weather, since this poet wrote his prognostics, twenty centuries and a half ago.

## Declension of Matrimony.

The Newburyport Herald says that the census statistics show that over four-sevenths of the marriages in Massachusetts are among the foreign born population. Why is it? For the most simple of reasons—the foreign born can afford to get married, and the native cannot; and this must be, so long as our extravagant modes of life continue. In social life there never was a people tending to deeper and more destructive social corruption—and that is most evident from the records of all the courts, and the columns of all the newspapers—than Americans. Once was the time when a wife was a "helpmeet;" now in a thousand of cases you can change the "meet" to "eat" and make it read more truthfully.

We boast of our system of education; we have female high schools, female colleges, female medical schools, and female heavens. Our girls are refined, learned; and wise; they can sing, dance, play pianos, paint, talk French and Italian, and all the soft languages, write poetry, and love like Venuses. They are ready to be courted at ten years, and can be taken from school and married at fifteen, and divorced at twenty. They make splendid shows on bridal tours, can coquette and flirt at the watering places, and shine like angels at the winter parties. But Heaven be kind to the poor wretch that marries in fashionable circles. What are they at washing floors? O, we forgot: nobody has bare floors now—how vulgar that would be! What are they at making bread and boiling beef? Why, how thoughtless we are—to be sure they will board, or have servants. What are they at mending old clothes? But there we are again; the fashion changes so often that nobody has old clothes but the rag men and paper makers now! What are they at washing babies' faces and pinning up their trousers? And here is our intolerable stupidity once more; having children is left to the Irish! What lady thinks of having children about her now? or if she is so unfortunate, don't she put them to wet nurses to begin with, and boarding schools afterward? We repeat—we have come to a point where young men hesitate and grow old before they can marry and afterward keep clear of bankruptcy and crime. What is the consequence? There are more persons leading a single life—are there more leading a virtuous life? It is time for mothers to know that the extravagance they encourage is destructive of the virtue of their children; that all the foolish expenditures making to rush their daughters to matrimony, are, instead of answering that end, tending to destroy the institution altogether.

**EFFECT OF MUSIC ON THE SICK.**—The effect of music on the sick has been scarcely at all noticed. In fact, its expensiveness, as it is now, makes any general application of it out of the question. I will only remark here that wind instruments, including the human voice, and stringed instruments capable of continuous sound, have generally a beneficial effect.—while the piano-forte, with such instruments as have no continuity of sound, has just the reverse. The finest piano-forte playing will damage the sick, while an air "Home, Sweet Home," on the most ordinary grinding organ, will sensibly soothe them, and this quite independent of association.—*Florence Nightingale.*

**RARITY OF THE AIR.**—It appears that the extreme rarity of the atmosphere in Virginia City is quite noticeable. This is to be seen in the reluctant manner in which the smoke of the city rises and hangs suspended but little above the roofs of the houses; also, it is very plainly perceived by the amount of panting we are forced to do if we walk briskly a few hundred yards.

**FIRE.**—A fire broke out in Virginia City on Friday evening of last week, on the west side of B street, a few doors south of Union, which would probably have been very destructive had it not have been almost instantly discovered and as promptly subdued. It took from the stove pipe of a restaurant.

**HORSE POWER.**—The "horse power," as applied to steam engines, is said to have arisen when people began to supercede horse mills with steam mills. The manufacturer would naturally enquire of the party desiring a steam engine, how many horses he wished to dispense with—hence the term now generally used, which is certainly more practical than scientific.

TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Title of Company and names of officers for the year.	Amount of stock & value per share.	When incorporated

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.

PALMER, HANSCOMB & CO.,

Golden State Foundry and Machine Works,  
First Street, near Market, San Francisco, Cal.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast. San Francisco, November 29, 1862 3m

Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 ACRES, HAS RECENTLY been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wildcat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to HARVEY S. BROWN, No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office, No 18 6mo

DEETKEN'S

Chemical and Metallurgical Works,

ON SAN BRUNO ROAD, ISLAIS CREEK,  
SAN FRANCISCO.

CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON. ALL THE GOLD EXTRACTED by Chemical process. Yield of Sulphurets from 30 to 50 per cent higher than the BEST AMALGAMATION PROCESS. Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov8-3m

JULIUS SILVERSMITH,

COMMISSIONER FOR NEVADA TERRITORY.

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery & Washington sts., Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE WHO HAVE BUSINESS relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

W. T. & J. GARRATT,  
CITY

BRASS & BELL FOUNDERS,  
Cor. First & Market sts., opp. Oriental Hotel,  
SAN FRANCISCO.

BABBIT METAL CASTINGS, FIRE ENGINES, FORCE AND LIFT PUMPS, Church and Steamboat Bells, Tavern and Hand Bells and Gongs, Hose and all other joints, Gauge cocks, Cylinder cocks, Oil Globes, Steam Whistles, HYDRAULIC PIPES AND NOZZLES for MINING PURPOSES, Iron steam pipe furnished with fittings, &c.; COUPLING JOINTS of ALL SIZES. Manufacturers of "Garratt's Patent Improved Journal Metal."

LEANDER RANSOM,  
CIVIL ENGINEER  
AND SURVEYOR,

Having been connected with the public surveys of the State of Ohio for 20 years, and the public works of the State of California for 7 years.

ALSO, STATE LOCATING AGENT.

And as such having the sale of

600,000 ACRES OF THE STATE SCHOOL LANDS,  
At the low price of \$1.25 per Acre.

Terms—Twenty per cent in cash, and the balance on a credit of several years.

OFFICE: Second floor of Express Building, N. E. corner of Montgomery and California streets. oct 3m

AGENCY FOR PATENTS.—The undersigned having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Patents and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETHERED & TIFFANY,

Office, 410 Montgomery street.

CHARLES R. BOND, (Late City and County Assessor.)

REAL ESTATE AGENT,

410 Montgomery street, San Francisco.

REAL ESTATE PURCHASED AND SOLD, LOANS NEGOTIATED

Washoe Stock Exchange,

N. E. cor. Montgomery and Merchant sts.,  
SAN FRANCISCO.

L. W. NEWELL & CO.,

Buy and sell Washoe, Emerald and other Mining Stocks and Securities. sep20

THEODOR KALLENBERG,

MAKER OF MODELS  
for Inventors,

MACHINES, MATHEMATICAL Optical and Philosophical Instruments Scales, Weights, etc.; Steel Stamps, Dies and Die Sinking, Embossing Stamps.

Repairing of Machinery promptly attended to. au7-3m  
(No. 4 Sansome street, corner Market, San Francisco.)

DEVOE & CO.'S

STEAM ENGINE

—AND—

MACHINE WORKS,

Corner Market & Fremont streets, San Francisco.

ALL KINDS OF MACHINERY, SUCH AS STEAM ENGINES, SAW MILL Irons, Flour Mills, Quartz Mills, etc., etc., made to order and repaired.

ALSO,

BLACKSMITHING, TURNING, FINISHING, PLANING, AND SCREW-BOLT Cutting

AGRICULTURAL MACHINERY of all kinds made and repaired.

Duplicate parts of Threshing and Reaping Machines and Threshing Teeth made to order, on the most reasonable terms.

Steam Engines and Boilers constantly on hand, and for sale cheap. Screw-Cutting Turning Lathes for sale. jcl8 DEVOE & CO.

LATEST IMPROVEMENT

In LADIES' BUCKLES.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and Dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address, FREDERIK REICHEL, Manufacturing Jeweler,

620 Merchant street, San Francisco. sep11

THE

NEW ENGLAND SEWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Guage and hemmer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.

STEWART & SHEAR, General Agents, No. 60 Second street. sep11

WILLIAM FELL, Notary Public for Storey County, N. T. Commissioner of Deeds for California Virginia City, N. T. my23

THE FOLLOWING GOODS TO BE FOUND AT  
H. D. PEARCE'S:

Gents' Heavy Gold Cases, different patterns;  
Ladies' Heavy Gold Cases, do do;  
Gold Telescopic Pen and Pencil Case;  
Extension Screw, Heavy Silver, for Gents;  
Extension Screw, Heavy Silver, for Ladies;  
Silver Extension Cases;  
Silver Telescopic Cases;  
Screw, Silver and Ebony Desk Holders;  
Slide Silver and Ebony Desk Holders;  
Reverse Silver and Ebony Desk Holders;  
Pen Holders, Silver and Ebony;  
Pen Holders, Gold and Ivory;  
India Rubber Propelling Pen and Pencil Cases  
India Rubber Propelling Pencils, short.

All the above goods are made to order and warranted; will be sold cheap for cash. There are some thirty different patterns, leaving an opportunity for parties to select and be suited.

A cheaper class of Pens direct from New York, at wholesale only.

Gold Pens constantly on hand. Gold Pens repaired. H. D. PEARCE, 606 Montgomery street, between Clay and Merchant, up stairs

GREAT REDUCTION  
IN PRICES.

STANFORD BROTHERS,

121, 123 and 125 California Street,  
KEEP THE LARGEST STOCK OF ALL KINDS  
OF  
Lamp Stock,

And will Sell Cheaper than any House in this State

Our customers in particular, and the country trade generally, are requested to ascertain our prices before purchasing from traveling agents, as we will sell at less rates than they can afford to. apl6tf

PHILADELPHIA BREWERY,

Second street, corner of Folsom, SAN FRANCISCO, CAL.

Hoelscher, & Wieland Proprietors.

Thankful for past patronage to a discriminating public, we beg leave to apprise at the same time our many friends and patrons that the above well known Brewery has been permanently located in our new premises, on Second street—the former residence of Capt. Folsom where we shall endeavor to continue in furnishing our numerous patrons with the best article of "Bier." We shall strive to perpetuate the good reputation for promptitude and the faithful execution of orders as heretofore, and thereby increase our custom. Nov9.

FULTON FOUNDRY AND IRON WORKS.

HINCKLEY & CO.,

MANUFACTURERS OF STEAM ENGINES, Quartz, Flour and Saw Mills; Cast Iron Fronts for Buildings, Mining Pumps, and all kinds of Machinery, Amalgamators, Etc., Etc.

47 & 49 First Street,

BET. MARKET AND MISSION, SAN FRANCISCO

ALL kinds of Iron and Brass Castings furnished at short notice. Every style of finishing to Iron when cast. Repairing to Machinery neatly done Pattern Making in its various forms.

D. B. HINCKLEY WM. E. WORTH WM. A. FIELD

SQUARZA'S PUNCH.

HOME MANUFACTORY.

WHOLESALE AND RETAIL.

No. 44 Leidesdorff street, near Sacramento st.

Branch at 406 Montgomery street. my30

S. ROSENBAUM & CO.—Importers of pure Havana Cigars, Tobacco, etc., corner Clay and Battery, 25 and 27 Cedar street, New York.

## Mining and Scientific Press.

W. B. EWER, . . . . . Editor.

SATURDAY . . . . . DECEMBER 13, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. SPERMOPHYING and ELECTROPHOTING. Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## THE TAX LAW—LEGISLATIVE BLUNDERING.

By the telegraphic report to the Associated Press, published in the *Bulletin* of Saturday last, we are told under the head of Congressional proceedings, that "The Committee of Ways and Means will probably hold a meeting to-day [Dec. 5th] to consider certain propositions of amendments of the Tax Law, believed to be necessary for its successful operation."

Here is a plain admission by the law makers themselves, that the Tax Law, passed at the last session of Congress, and which the Federal Tax Collectors are now endeavoring to enforce, is inept or unjust; probably both, in some of its provision. This is a fact that our mechanics, hereabouts, and business men generally, have seen from the time of the first promulgation of the law. It is to be regretted that so few mechanics and thoroughly educated business men are elected to Congress and our various State Legislatures. It is only by the election of, at least, a few such men, that the great Manufacturing, Mechanical and Mercantile interests of our country can be truly represented. Those interests will ever be imperfectly represented so long as mere politicians, and third rate lawyers—men with scarce a moiety of business qualifications are elected to represent us in the halls of Legislation. The bill in question affords abundant evidence that it was prepared and passed by persons unacquainted with machinery, manufactures, and business generally. For example:—

Under date of October 9, Commissioner Boutwell writes to a gentleman in Baltimore:—"Your letter of the 2d inst., containing inquiries as to whether the tax under the excise law is laid both on castings and finished machinery, without reference to the fact as to whether the component parts of said machinery have been previously taxed as castings or not, is received."

I am of the opinion that the view taken by the manufacturer is sustained by the law. Castings are liable to a tax of three per cent, unless otherwise provided. When sold by the manufacturer the tax must be assessed and paid. If afterward these castings are assessed as component parts of other articles, the latter (that is the articles) will be assessed without regard to the fact of previous payment."—*New York Times*, Oct. 16.

By this decision it will be observed that castings which are made at one shop and carried to another, belonging to a second party, and then put up into a complete piece of machinery are twice taxed, once at the shop where they are cast, and again at the shop where they are put together, as the component parts of an entire machine. Now this certainly cannot have been intended, or if so our law makers have been legislating for the benefit of large capitalists at the expense of smaller ones; for instance:—

In the decision as given above by Commissioner Boutwell, and the comments we have made thereupon, it will be observed, that large machine shops and manufactories, which are provided with foundries, pay a single tax upon their products that are composed partly of cast and partly of wrought metal, while the small manufacturers of such articles pay a double tax on their castings. There are many small machine shops, the proprietors of which purchase their iron and brass castings from separate foundries, and fit up these castings, and combine them with other parts made of wrought iron and steel. Now the castings which they purchase are taxed three per cent, and their finished work is assessed at three per cent upon its whole value, of course their castings are taxed twice. On the other hand, a large establishment in which machinery is manufactured, and

has a foundry connected therewith, escapes the tax upon their castings, &c. Their castings are not taxed, as such, because not sold separately. This tax will inure entirely to the benefit of large machine establishments, and tend to the ruin of smaller ones.

This law also falls injuriously on other classes of manufacturers, and, in most cases is entirely, shifted, in fact, from the capitalists, on whom it was intended to fall, to the poorer classes or the consumers; as for instance the tax on gas, in many cities has been directly levied, by the companies, upon their customers, the consumers, who, in addition to their regular bill of so much to the number of feet of gas consumed, now find a little item of federal tax added to the usual amount. Now such a thing was never intended by the law makers—They have blundered again. We know not how the gas tax is paid in this city, but according to the *New York "Gas Light Journal"* that is the way some of the Eastern companies are paying their taxes, while others more patriotic, willingly submit to the true intent of the law and pay the tax themselves, as corporations. This plan of "shifting the responsibility" is very generally, (though oftentimes indirectly) practiced by manufacturers of all classes, to the detriment of the consuming and laboring people.

We judge from the item in the telegraphic dispatches of Saturday, alluded to in the outset of this article, that it is in part to obviate these evident abuses of the tax law, that the Committee of Ways and Means are about revising the same. We trust the Committee will have the good sense to consult some well informed practical men—merchants, mechanics and manufacturers—in their proposed modification thereof. It is not for the interest of the manufacturers that the burthen of taxation should fall upon the poorer classes, neither do they, as a body, desire it. Their only wish is that they should be protected from the sharp practices of a portion of their own number, so that the burthen may fall equally upon those for whom it was intended—and upon those only.

## THE NEVADA INCORPORATION BILL.

We have said nothing heretofore upon the Incorporation Bill now pending before the Legislature of Nevada Territory, for the reason that having taken upon ourselves the management of the *Press* since that bill came up, and having many pressing duties meanwhile crowding upon us, we have not had time to give it that attention necessary to a thorough knowledge of its provisions and probable workings—in fact we have been unable to find time to read the bill. We notice that there appears to be quite a contrariety of opinion regarding the bill among Washoeites themselves—the Territorial *Enterprise* being warmly interested in its favor while its contemporary, the *Virginia Union*, is decidedly opposed to its passage. We believe the bill is now pending between the House and Council. The following paragraph from an editorial on the propriety of the passage of the bill, which we clip from the latter paper, appears to us to be a correct view of the question:—

What should have been done in this connection was simply to pass a domestic incorporation law, leaving parties hereafter to incorporate under it, or under foreign law, as they might deem expedient. To close down so harshly and abruptly upon all corporations elsewhere formed, is not only unjust, but contrary to international courtesy and the practice common amongst all enlightened commercial peoples. All we really need at present is a law providing for domestic corporations, so that our citizens can organize at home or go elsewhere, as they may see fit. The question of foreign corporations should have been left for future legislation, when the light of experience would have enabled us to adopt such measures as seemed necessary and just. A local law would have answered every purpose for the present, and saved us from the charge that will elsewhere lie against us, of acting in violation of good faith and the comity of States. Of the same character is that clause demanding that the annual election for trustees shall be held at some point within the Territory of Nevada.

THE VOLCANIC SMELTING FURNACE.—The *S. F. Call* says successful experiments in reducing copper ore are now being made in this city with the Volcanic Smelting Furnace, a recent invention by Mrs. E. J. Hall. Half a ton of the ore was vitrified and the metal running in less than an hour yesterday—the only fuel used being two bushels of charcoal to one bushel of rock. Specimen bars of copper from this furnace can be seen at the offices of Col. J. D. Stevenson and T. Ogg Shaw, in this city.

## COPPER.

The prospective value of the copper interest to this State and city can scarcely be overrated. The discoveries already made render it certain that millions of dollars must ere long be employed in working these mines, and large amounts of capital must also be invested in this city in the erection of machinery for reduction and smelting; for no one can for a moment suppose that San Francisco will long permit the transport from her wharves of the immense amount of copper ore which will soon seek a foreign market for its reduction, unless the necessary facilities are afforded at home. The copper mines of Calaveras, only forty miles from this city and within eight or ten of steam navigation, are already assuming an importance or no ordinary magnitude. Over half a million dollars' worth of ore from these mines has already passed through this city for Eastern and European ports, and large amounts of foreign capital are now in this city seeking investment either in the mines themselves, as working capital, or ready for investment in the purchase of ore for foreign shipment. Our own capitalists are also buying and shipping for the Eastern market, to a limited extent, however. There is no class of mines which more readily commands capital than copper, nor any which dispenses more important local benefits to the community where they exist. They contribute far more real wealth than either silver or gold mines. We may safely predict that the copper mines of California will soon rival in importance the silver mines of Nevada, adding many millions, annually, to the real and personal wealth of our State. Many of the claims in Calaveras County are already held at a high valuation.

In our last issue we gave a general review of the extent and progress of the copper mining interest of the State. We shall continue to lay before our readers, from time to time, whatever news, of interest, transpires in relation to this growing branch of industry. During the week we have noticed the following items:—

The *Stockton Independent* of Dec. 2nd, says in relation to the progress of Copperopolis:—"The Union Company at Copperopolis is now working with three engines, running night and day. The Keystone, Empire and Calaveras claims are giving out better prospects of late; and the Webster, a new claim, under the management of Capt Sanders, is coming rapidly into importance. Schools, Sunday schools and religious societies are taking root at Copperopolis, and altogether the town is acquiring a degree of permanence and character hardly to be expected of a place whose foundations were laid but two years ago."

The *Stockton Republican* of the 4th instant, notices a rich copper strike as follows:—"During this week the men employed in prospecting the Beauregard Company's copper claim in Calaveras county, have struck some very rich rock, paying over \$60 per ton. The rock is in abundance, and the mine has every indication of becoming richer and more extensive as the shaft and prospect progresses. This is cheering news, as all the shares are held in this county and a large proportion in the city."

MEETING OF NEVADANS.—A large and respectable meeting of residents of Washoe, temporarily sojourning in San Francisco, was held at the Russ House, in this city, on the 8th inst, to take into consideration the proposed Incorporation Law, for Nevada Territory. After much and careful consideration the meeting adopted an address, or petition to the Territorial Legislature, setting forth, as the opinion of the meeting, that the law, as proposed would operate most disastrously to the interests of the Territory, and asking that the same may not be passed into a law.

It appears to be the general impression, both here and in Virginia City, among business men, that the passage of the law will have a tendency to restrain San Francisco capitalists from investing under it; and that capital now moving in that direction will be drawn toward the mines of Sonora. If the tide of mining trade toward Nevada should receive a check by reason of the passage of such a law as the one proposed, it will prove most disastrous to the now flattering prospect of that new Territory.

A TUNNEL, after the manner of the Thames Tunnel is now in process of construction under the river Indus to serve as a road way for the great railroad now being constructed between Calcutta and Peshawar.

## WASHOE MINING INTELLIGENCE.

We condense the following items from the Washoe papers, chiefly from the *Territorial Enterprise*:—

It is thought by many business men in Virginia City, that the mills now in operation there will be insufficient in number and capacity to crush all the ores that would be raised here next season. The argument is that in the whole range from Cedar Hill to Gold Hill, a distance of nearly two miles, nearly every company holding ground are on their veins and will very soon be taking out pay rock, all of which must be reduced by somebody, and the mines already open are capable of supplying what mills there are at present in the country. The Editor of the *Enterprise* thinks it will be the wisest plan, however, for capitalists to defer the further erection of mills until the actual demand is seen. Next spring will be soon enough.

LARGE amounts of Gould & Curry rock are still being crushed in the mills at Gold Hill and Silver City. The Central mill is also working upon rock from that mine and turning out heavy yields of silver.

The Mariposa mill has just cleaned up about four hundred pounds of amalgam. This mass of metal is principally silver, the ore worked being from the Gould & Curry mine.

OPHIR IMPROVEMENTS.—The Ophir Company have erected a very neat brick building just above the old Spanish stone house, intended for the Superintendent's room and offices for the Company. About fifty yards further north they have put up a stable, 32 by 72 feet. This latter is also a good building, well gravelled inside. These improvements are on the Company's claim.

HOISTING HOUSES.—Along the line of the Comstock lead from Virginia City to Gold Hill, says the *Enterprise*, are a number of factory looking buildings which the stranger would be puzzled to comprehend. Smoke stacks protrude from their roofs; jets of steam spurt in intermittent puffs from their sides; but about them a stillness reigns that forbids the possibility of their being quartz mills. What then can be the work so silently performed by these laboring engines? Their work, we answer, is not the noisy surface clatter of the reduction works; their labor is far below the surface of the earth in the dusky shafts that lead into the dark bowels of the deep buried mine. There, day and night, they strain at hoisting up to daylight the gleaming ores of the black galleries below. These are hoisting houses.

A FEW new buildings are still to be seen in process of erection in various parts of the city, but they are more scattered than a fortnight since.

THE IRONSIDES.—The shaft of the Ironsides Company, on the Vermilion ledge, is down ninety feet. They are now drifting into the hill and taking out a good looking quality of white quartz, intermixed with a large proportion of the chlorine substance so abundant in the Ophir. This company hope soon to be taking out first-class rock in sufficient quantities to run a mill or two. The company is located much higher up the mountain than the Comstock, so high, in fact, that it was thought at one time a thing almost incredible that paying ore should be found at such an elevation above the great zone containing the Virginia and Comstock leads.

THE PIONEER COMPANY after striking their ledge, have had to commence a drain-tunnel on account of water coming in too freely. This tunnel commences just below the Vermilion tunnel, Virginia ravine, will be 700 feet long, will strike the lead at least 300 feet below the surface, and about 150 below the first tunnel run. It is thought the new tunnel will not only drain the lead thoroughly but develop a better quality of ore.

UNITED STATES AIR SHAFT.—The upper air shaft of the United States tunnel, on the ridge south of Cedar Hill, is now down nearly two hundred feet. It will be two hundred and forty feet at the point of its intersection with the tunnel. It is sunk in such a manner as to pass down about twelve feet south of the tunnel, and the two will be connected by means of a short drift. By sinking to one side of the tunnel and drifting into it all danger of rocks falling upon the workmen passing along the tunnel is obviated. After the completion of the air shaft they are at present engaged upon, the company think they will be able to drift into the hill to their veins without the expense of sinking other shafts for ventilation.

IOWA SHAFT.—The shaft now being sunk on the Iowa, in

the northwest part of the city, has reached the depth of one hundred feet. The shaft is boarded up and divided into two compartments, and the dirt is hoisted by means of a windlass with a double rope and two buckets. The company do not expect to strike their vein before the shaft shall have attained a depth of one hundred and fifty feet. The rock now coming out is of a tolerably hard, blue quartzose species, containing iron pyrites in considerable quantities.

PAY ROCK IN AMERICAN FLAT.—The *Enterprise* is assured by an eye-witness that the Baltic Sweezy Company, south-east of Gold Hill, and in the north margin of American Flat, have struck a fair quality of ore in their claim. They have a shaft down 160 feet in the lead, and are taking out rock resembling that of the Eliza Bradley on Santa Rita claims—galena with sulphate of silver.

FIRST MILL FOR PALMYRA.—A lot of lumber went out to Palmyra district last week, to be used in the construction of a mill for the Yuba Company, or at least a mill for crushing the ore of the Yuba lead. This is only the beginning—the first of many mills that will be erected in that district at no distant day.

SPANISH No. 2.—Spanish Company No. 2 have erected a building over their engine and hoisting apparatus twenty by thirty feet in size. The building was raised, inclosed and roofed between sunrise and sunset of the same day. In two days more the pumps and hoisting machinery were at work.

DANA MILL.—The Dana mill is well nigh completed. It will be running in about a month. They have on hand a large stock of fuel, mostly nut pine, from the timber trees east of the Carson.

THE SIERRA NEVADA COMPANY have quite a lot of heavy timbers on the ground for use in their mine, and are receiving still more. Their timbers are brought from the foothills of the Sierra Nevada range.

THE NEW PLAY, at the American, by Dr. Bein, has proved quite a success. The scene is laid in Italy. The business is good, and the interest of the piece well kept up throughout. The play is pronounced by good judges, not only original, but very excellent, and one well worth seeing. It has been performed twice and will be again presented, this evening for the benefit of the author—which we trust will be a substantial one.

A NEW toll road between Virginia City and Gold Hill pierces a high hill through a tunnel 180 feet long.

## Mining Stock Report.

SAN FRANCISCO, Dec. 12th, 1862.

Ophir.—Sanborn's Circular of last week quotes sales of 468 shares of Ophir Stock at rates from \$2400 to \$2750 per foot. The sales at the Board for the week have been very uniform—from \$2450 to \$2475, having dropped somewhat from last week.

Gould & Curry.—Fifty shares were sold last week for \$2550 and 40 for \$2560, 1st January. The sales at the Board for the present week are quoted at from \$2,475 to \$2,500.

Central.—38 shares were sold at \$1,425 and the same number subsequently at \$1,600 as per Sanborn's Circular.

California, after remaining quiet for several weeks is quoted at \$1,200, an advance of \$100. 240 shares sold for \$1,260, 1st of March.

Cholar is rapidly advancing and is quoted at the Stock Board from \$305 to \$350. \$500 was asked on Wednesday.

Potosi has been but little enquired for. Small transactions are quoted at from \$75 to \$85.

North Potosi is quoted at \$7—offered at \$7 50.

Sierra Nevada is quoted at \$65. 40 shares changed hands at that figure, last week.

Daney is quoted at \$100 bid.—200 asked. A slight falling off.

Burning Moscow is quoted by Sanborn's Circular at from \$63 to \$65.

Mount Davidson is selling for \$5 50—\$6 asked.

Meredith is not quoted. \$25 is asked.

Burnside is not quoted.

Iowa quoted at \$150.

Norton is quoted at \$20. Forty shares changed hands at that price.

Sacramento is quoted at \$20—\$32 50 is asked.

Lucerne is not quoted.

Hale and Norcross is quoted at \$250 \$300 asked. No sale reported.

Rogers quoted at \$22 1/2 bids—\$27 asked. \$5 assessment.

Lady Bryan—no sales quoted.

## Esmeralda Stocks.

The Wide West is still advancing, and is quoted at from \$400 to \$410.—\$420 is generally asked.

Antelope is quoted at \$70—with \$100 asked. Sold at the Board, on Thursday for 100 dollars.

Elena is not quoted. \$8 is asked.

Silver Hill is quoted this week at from 12 to 14 dollars.

Utah has buyers at \$18—held at \$26.

Real Del Monte quoted at \$20 with \$25 asked. An advance of \$8.

## Coso Stocks.

The Josephine had bidders, the past week, at the Stock Board at from \$15 to \$16.—Holders asking \$20 to \$21.

Coso—12 to 13 at the Board—\$20 asked.

Willow Springs—quoted at \$15.

## Mexican Mines.

St. Nicholas Silver Mining Co. is quoted by Sanborn's Circular at \$105.

Mina Prieta finds no recent buyers, but is held firm at \$110.

Diego Padre is quoted at from 30 to 33 dollars..

## WASHOE STOCK REPORT.

[Compiled chiefly from the *Daily Territorial Enterprise*.]

Very little stock is now being offered for sale in Virginia City. Several parties have recently withdrawn their stocks from the market, preferring to borrow money at a high rate of interest rather than sell at present prices. The low rates now ruling present a most favorable opportunity for profitable speculation, as money can scarcely be invested, at this time, in stocks which will not soon advance to a very high figure over that at which they are now selling. The continuance of pleasant weather causes the impression to prevail that we are to have on open winter, and one highly favorable to mining operations.

The La Crosse Company, it is reported, have struck into the same rich ore as that now in dispute between the Moscow and Madison Companies. A knowledge of this will probably cause some activity in that stock.

Norton stock is, just now, without demand. The same development of rich ore which this Company has made during the past few weeks would, at a more favorable season, have caused ready sale for their stock at three times its present rates.

Oriental.—Several small transactions took place in this stock, last week, at low rates.

Mammoth Ledge. Considerable ground in the Mammoth Ledge, Eagle District, is offered for sale. Some two years since a great excitement was created in consequence of the rich rock from this district. The entire district appeared like one continued mass of valuable ore, but after some little prospecting, with an unfavorable result the district was comparatively deserted, it being impossible to find any well defined ledge. It is still thought by many that valuable discoveries must be made in that neighborhood.

Baltic was offered, on the first instant, for \$25 per foot.

North American was enquired for, at same date, at \$5, but no transactions are quoted in either.

Sacramento.—Thirty dollars was offered on the 1st. The rock of this Company's ledge is said to be very rich, though but little gold is to be seen on the surface. The *Enterprise* of the 5th instant notices a fine specimen from this ledge, on exhibition at the door of Paxton & Thorner's Banking House, in Virginia City. The specimen weighs 800 lbs.

Some very rich rock has recently been struck at the foot of Cedar Hill, which has the appearance of being a regular ledge. Several claims have been located on the North and South extensions of the Company making this discovery, who have taken steps for the prospecting of their claims, a work which will soon decide whether the discovery in question is a ledge or merely a slide from the hill above. The discovery appears to be attracting considerable attention, and the discoverers are venturing the wildest predictions in regard to its probable richness.

Ironsides.—The late activity in this stock has subsided. The demand for it has ceased, and the stock has been withdrawn.

The Tunnel stocks seem to be meeting with much favor.

Mount Davidson and Cedar Hill are firm at San Francisco quotations. Some enquiry is made for United States.

Waterhouse—20 feet sold at \$3 50 per foot.

Gay—10 feet sold at \$3 per foot.

Union—is enquired for at \$5 per foot. This company have a large amount of rock upon the surface which has the appearance of being rich, but still it is thought cannot be worked to a profit. The vein, however, improves with its depth, and the Company will no doubt soon develop a valuable mine.

The Yellow Jacket is taking out valuable rock, which is paying a handsome profit—and, as a consequence, their stock is considerably enquired after, but at such rates as the holders persistently refuse to accept.

The Crown Point Mining and Mill Company appear to be doing a thriving business. Their mill is kept constantly at work upon rock from their mine.

The Palmyra Diggings.—Favorable accounts continue to be received from these Diggings. Several Companies are taking out ore, which is being crushed with very satisfactory results.

Nevada.—Six dollars per foot is offered for this stock; but none changes hands, holders firm at higher rates.

The Yolo Company which recently suspended operations on their tunnel, have recommenced the work of extending the same to their several ledges. It is thought that one hundred feet of extension will reach their first ledge.

Belecher is enquired for at \$10 per foot. This Company is located immediately in front of the Crown Point ledge. Their stock is beginning to attract some attention among buyers.

Ten feet of Birdsell changed hands for \$16 per foot—a slight advance over last quotations. This mine has been opened at the surface, also at a depth of 75 feet, and again at 100 feet. They have proved that the vein is constantly improving with its descent, and have now let a contract to open it fifty feet deeper still, from which point they propose to commence active mining operations.

Bloomingsdale sold for \$4 50 per foot—ten feet changed hands.

Zouave is offered at \$10 per foot. This Company is now taking out fine ore, such as should greatly enhance the value of their stock.

York is offered at \$5 per foot, without buyers. Hazel Green at \$5. Ten dollars are offered for Eureka without finding buyers.

The following stocks, not enumerated above, are in the market in Virginia City, and held at the figures annexed:—

Santa Fe	25 00	Summit	25 00
Empire	6 00	Washington Ledge	6 00
McBee	25 00	Milton	20 00
Belvidere	15 00	Laboring	16 00
Peytona	25 00	Sweezy	26 00
Durgan	4 50	Caledonia	8 00
El Dorado	70 00	St. George	3 00

## GIFTS, DONATIONS AND SUBSCRIPTIONS

To the work entitled "THE METALLIC AND AGRICULTURAL WEALTH OF THE PACIFIC STATES." The publisher desires to thank the several gentlemen whose names are hereto appended, for their mrgnanimity and aid in behalf of this important work.

Samuel Brannan, Esq., Citizen.  
John Parrot, Esq., Banker.  
Hyam Joseph, Esq., Citiz n.  
Ira P. Rankin, Esq., Collector of Customs.  
S. H. Parker, Esq., California Postal Agent.  
S. C. Bradshaw, Esq., Pacific Metallurgical Works.  
David Henriques, of the Board of Stock Brokers.  
Rev. Dr. E. Cohn,  
Rev. Dr. E. H. Bien.  
I. M. Mugarietta, Mexican Consul.  
H. Meyers, Citizen.  
Henry M. Hale, City and County Auditor.  
Dr. J. C. Tucker, of Steamer Moses Taylor.  
Dr. J. W. Van Zandt.  
Harvey S. Brown, Attorney and Counsellor.  
William Schmolz, Coiner, U. S. B. Mint.  
James Hitchens, Supt of Willow Spring Mine.  
G. F. Deetken, Supt Metallurgical Works.  
etc. etc. etc.

**BOILER EXPLOSIONS.**—Much is said in reference to boiler explosions about super heated steam, peculiar gaseous formations, and other conditions and circumstances, supposed to be entirely beyond ordinary control: yet the question has often been put and never yet answered in the affirmative—"Did any person ever know of a boiler explosion when there was full evidence that every thing was right about the quantity of water in the boiler, about the safety valve, the braces and such other matters as may at all times be within the positive knowledge of the engineer?" All reliable experience goes to prove that neglect and carelessness are the producing causes of accident; and perhaps we may add that such carelessness generally arises from a lack of proper appreciation of the responsibility of the position of an engineer, frequently on the part of the employer, who, unwilling to pay the wages of a competent person, too often takes up with one whose only knowledge of an engine has been obtained by working about one, at most, perhaps, occasionally assisting a competent engineer in the discharge of his duties. The control and management of a steam engine is one of the most important and responsible duties connected with machinery, and should never be entrusted to any other than one thoroughly educated to the business—one who is not only capable of running one, but who also has sufficient knowledge to be able, at all times to pronounce upon the safety and capacity of an engine. None others should be allowed to run an engine, especially when lives are exposed to danger from any class of accidents. It is only by a refusal to employ incompetent persons that a proper regard for the responsibility of the position can be maintained among engineers themselves—such as will ensure a general immunity from this class of accidents.

A BIT of phosphorus, from a match, ignited under the finger nail of a German student at Dusseldorf and, though the flame was immediately extinguished, the hand swelled so rapidly that the whole arm had to be amputated.

A PIECE of land was recently sold in London at the rate of \$9,300,000 per acre, equal to \$272 50 per square foot.

## 50 lbs. MARINE AND FIRE-PROOF PAINT

MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linsseed oil: if a lighter color is wanted, mix less paint, more lead.  
ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

G. T. FOUQUE, Superintendent.

S. C. BRADSHAW, Agt.,

WORKS, North Beach; Office, 318 California st.,  
SAN FRANCISCO

## Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

## PROSPECTUS TO THE PEOPLE OF THE STATE OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hither from England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists, for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our Government—to marine conveyances—the merchant—the manufacturer, the mining companies and professional community, cannot but be beneficial, provided the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Pre-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work, (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils; also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay these several important features before our people through the Mining and Scientific Press, and the work he hereby offers. But the most important subject in his mission is the inducements he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the household, to the professional man and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

## WRIGHT'S PICKS.

## WRIGHT'S PUNCH PICK

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

Je20

JOHN WRIGHT, 511 Market street,  
Opposite Battery, San Francisco.

## LEWIS COFFEY &amp; RISDON'S

## STEAM BOILER AND SHEET IRON WORKS.

The only exclusively Boiler Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work or the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner of Bush and Market Streets.

Opposite Oriental Hotel, San Francisco, Cal.

RECENT PATENTS.—Granted to CALIFORNIA INVENTORS through the Pacific Agency, J. SIEVERSMITH, Solicitor:

E. E. MATTESON, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

ELANDER HEATH, San Francisco, *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

G. F. DEETKEN, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

## Routes and Fares from San Francisco to Foreign and Domestic cities.

*Pacific Mail Steamship Company*.—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

*Nicaragua Steamship line*, Ross, Dempster & Co., agents. —Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

*California Steam Navigation Company* dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petaluma, \$3.

*Overland Mail Company*.—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction;—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA  
Connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company, at Aspinwall.

**FOR PANAMA,**

**V. SQUARZA'S**

**PUNCH FACTORY.**

WE PRESENT HERewith THE PORTRAIT AND TRADE MARK OF the gentleman who heads this article. Mr. Squarza is favorably known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is an heir in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser
Arac do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Cocoa do.	Anti-Dyspepsia Bitters,
Coffee do.	do.	Appetizer,
Tea do.	Morning Comfort,	Ladies' Tears,
Pineapple do.	Kuemel,	

And CHAMPAGNES of all brands.

**Dr. Van Zandt,**  
**Consulting Physician and Surgeon,**

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity! Made Subservient for the Cure of all Nervous and Spinal Diseases.

**THAT THIS PRINCIPLE,** successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanting by physicians, to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

**Too Much Cannot Be Said**

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting, and in order that the tissue of the body should be susceptible to remedial agents we must first restore and

**Awaken the Magnetic Life Within Us.**

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

**No Compromise with Disease.**

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

**To the Ladies of California.**

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only number of the legitimate profession in California who really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complainings which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wonted tonicity of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

**Baffled the Skill of Physicians.**

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore to usefulness, and spare you a blessing to your family and to society.

**All the World Over**

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, menal and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or coarctate habit of body.

**None Need Despair of Relief.**

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

**The Eye and Ear Diseases.**

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon on our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29—3m

**FREDERICK KESMODEL,**

**Cutler and Surgical Instrument Maker**

**817 KEARNY STREET,**

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

This attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,

Inventor and Patentee.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual loss was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts "  
 " " 750-1000ths to 950-1000ths " .14cts "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts, " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

PACIFIC PATENT AGENCY. . . . J. SILVEESMITH,  
 SOLICITOR.

## MINING AND SCIENTIFIC PRESS.

## THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

## The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

## The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

## The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

## To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

## Terms.

To mail subscribers—Four Dollars per annum.

## Club Rates.

Five Copies for Six Months, \$8.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80

Names can be sent in at different times and from different Post-offices

Specimen copies will be sent gratis to any part of the country.

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

A Circular containing further information, and a synopsis of the Patent Laws of various countries, will be furnished on application to J. Silveesmith, Government House, San Francisco.

Miners, Inventors, Agriculturalists, Capitalist and Mechanics, will find it to their advantage to subscribe for the MINING AND SCIENTIFIC PRESS—being the only journal of that class published upon this continent. Issued every Saturday at four dollars per annum.

Address, J. SILVEESMITH,  
 SAN FRANCISCO.

## MUSIC! MUSIC!! MUSIC!!!

A. KOKLER,

IMPORTER OF EVERY DESCRIPTION OF

Musical Instruments and Musical Merchandise.

Sheet Music and Music Books.

GENUINE ROMAN STRINGS, &c., &c., &c.

Light's New Patent Insulated Iron Frame is put into all of  
 Light & Bradbury's OVERSTRUNG PIANOS.

Wherever these instruments are known they

RANK AS THE FIRST AND BEST

In tone, delicacy of touch and durability.

All the leading Musicians of the country have testified to  
 their superiority.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skilful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skilfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skilful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertion in the new and growing city of the Pacific.

We subscribe ourselves yours,

Rev W. Stanton, L L D,

Richard A Vaux,

Dr Straud, M D,

Wm H Mills, M D,

Cleopole Stevens, M D,

Samuel Patcost, M D,

Walter C Foster, M D,

S W Howard, Att'y at Law,

Pierce Butler,

Henry B Linton, M D,

Wm L Howard, M D,

Philippe Lidy, M D,

Myers Davis, M D,

W M Thompson, M D, and others.

No. 718 Catherine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skilful surgeon.

MRS. J. W. HAMMOND.

VOL. VI.

SAN FRANCISCO, SATURDAY, DECEMBER 20, 1862.

NO. 8.

#### Practical Information for Working Miners.

In our last issue, we gave, under the above head, certain rules by which working miners, and amateur prospectors, might, with the blowpipe, determine the character of the minerals upon which they were operating. We had intended to have prefaced those rules with a few practical hints in regard to the use of the blowpipe, but neglected to do so until it was too late for that week. We supply the omission now.

In using the blowpipe the flame of a lamp, candle, or gas may be used. The best flame is that by a lamp with a large wick fed with olive oil. The smaller end of the blowpipe should be placed within the flame, and, the wick should be slightly bent in the direction of the flame.

"The blowpipe flame consists of two cones; an inner of a blue color, and an outer, yellow. The heat is most intense just beyond the extremity of the blue flame. The inner flame is called the *reduction* flame, and the outer the *oxydation* flame. A mineral reduced to the metallic state by the inner, may often be oxydized, or combined with oxygen, in the outer flame, where it is in contact with the atmosphere. For oxydation, the beak of the blowpipe should have a large aperture, and the wick of the lamp should also be large; the heat usually requisite is that of incipient redness."

To support the mineral in the flame, a piece of charcoal is generally used—the coal being carefully selected, well burnt, but firm; that from pine wood being the best, as it burns with the least ashes. A small cavity should be cut in the surface, barely sufficient to receive the substance to be acted upon—which should never exceed, in bulk the size of a pea. Sometimes the substances to be acted upon are of such a nature that they will sink into and blend with the coal; in such cases a metallic substance, as of copper, silver, gold, or best of all, platina may be employed. Coal is always preferable when it can be used, as the carbon of that material greatly assists in intensifying the heat necessary for the desired reduction.

Many minerals remain unaltered before the blowpipe unless some substance is added to aid in the fusion or reduction. These substances are called fluxes; the most common and easily attainable of which, is borax.

From the above hints almost any person may, with a little practice, soon acquire considerable efficiency in the use of the blow pipe. Having become sufficiently expert in the use of this instrument as to decide upon the character of the mineral upon which he is operating, the amateur will naturally desire to carry his investigations a little farther, and ascertain the *proportion* of metal contained in the ore upon which he may be operating. This may be ascertained in the case of any material which yields a regulus—the button of pure metal, which, in the melting of ore, falls to the bottom of the crucible) and by an instrument so simple, that any person may make one for himself. Of course, it is always better that the prospector should be provided with the proper instruments, which may always be obtained in any considerable city in the country. But we are, just now, writing for the prospector, who may be at a distance from such

facilities, and who, of course, must be thrown on his own resources.

#### HOW TO ASCERTAIN THE PROPORTION OF METAL CONTAINED IN ANY QUANTITY OF ORE.

Take any common marsh reed, such as will yield a straight joint of eight or twelve inches in length—eight will answer very well. This joint should be carefully split, so as to form a trough through its whole length. Then take a narrow slip of very thin paper (that known as pony paper or bank post, is most suitable) the length of the piece of reed, and paste it upon a common carpenter's rule or any scale where the inches are marked off, (a scale of ten to the inch is better than eight.) It should be so pasted that, when dry, the divisions of the inch may be easily and correctly marked upon the paper with a fine pointed pen. Previous to marking off the inches, it were well to draw, with a rule, two parallel lines the length of the paper and about  $\frac{1}{8}$  of an inch apart, and between these lines mark the divisions of the inch. This done mark the centre division line with an 0 [zero]; then commence each way, right and left, and number every fourth line from the centre to the ends, thus:

The fourth line each way from the centre should be marked 10; the 8th, 20; the 12th, 30; the 16th, 40: &c.; and a slip of 10 in. long graduated into 10ths of an inch, we have on each arm 50 lines, or 125°, taking 4 lines for 10°, or 2½° each line. While the lines and numbers are drying, the exact centre of the reed trough may be ascertained, and marked right across by spots on the two edges. A line of gum-water, full  $\frac{1}{8}$  of an inch wide, is then laid with a camel's hair pencil, or any convenient instrument, along the hollow; and the paper being stripped from the rule (which it leaves easily), the graduated strip is cut out with scissors, and laid in the trough, with the mark 0 (zero) exactly in the centre. Being pressed close to the gummed reed, by passing the round end of a quill or any other convenient instrument along it, it graduates the trough from the centre to the end. The graduation is very true, if well managed, as the paper does not stretch with the gum-water, after being laid on the rule with paste.

A very fine needle is next to be procured and passed through a slip of cork, the width of the trough, about  $\frac{1}{8}$  of an inch square, and  $\frac{1}{8}$  thick. It should be passed through with care, so as to be quite straight. The cork should then be cut, until one edge of it fits into the trough, so that the needle shall bear on the edges, exactly in the spots that marked the centre, as it is of importance that the needle and trough be exactly at right angles to each other. The cork is now to be fixed in its place with gum-water, and, when fast dry, to be soldered down on each side with a small portion of any soft resinous cement, on the point of a wire or knitting-needle. A little cement being also applied in the same manner to the edges of the cork where the needle goes through, to give it firmness, the beam is finished. It may be balanced by paring the edges on the heaviest side, but accurate adjustment is needless, as it is subject to vary with the dampness or dryness of the air. The support on which it plays is a bit of tin-plate (or, in preference, brass plate),  $\frac{3}{8}$  of an inch long and 1 inch wide. The two ends are turned up square  $\frac{3}{8}$  of an inch, giving a base  $\frac{3}{8}$  of an inch wide, and two upright sides  $\frac{3}{8}$  high. The upper edges are then rubbed down smooth and square upon a Turkey stone, letting both edges bear on the stone together, that they may exactly correspond. For use, the beam is placed evenly in the support, with the needle resting across the edges. Being brought to an exact balance by a bit of writing paper, or any other substance placed on the lighter side, and moved toward the end until the equilibrium is produced, it

will turn with extreme delicacy—a bit of horse-hair,  $\frac{1}{8}$  of an inch long, being sufficient to bring it down freely.

This is used as follows:

A suitable portion for an assay, say 1 to 3 grains, of the mineral to be tried, is placed on one side of the beam, and counterpoised by a small weight, or any other substance on the other side: on No. 100 if the produce be required per cent. (but if per cwt., on No. 110), the assay piece being moved to or from the centre until the balance is adjusted. Its exact place on the beam being then noted, it is to be taken off and reduced in the usual manner. If it require roasting in a cupel, it may be balanced therein, but the cupel must be first heated red, that its weight may not change during the operation, and then be balanced by a separate weight from that which counterpoises the ore, and, is to be moved to indicate the changes in the assay; and, as in this case, the cupel must not be moved toward or from the centre, after being balanced, the powdered ore must be adjusted to its counterpoise weight, placed on 100, by taking out, or putting in a little, as the case may require, and not by moving, as when no cupel is used.

When the reduction is complete, and the particles of metal have been brought together into one bead it is allowed to cool, and then broken out of the soda (if any was used), is replaced on the beam precisely where it stood; or the loss or gain in roasting may be ascertained in the same manner. The counterpoise will now require to be moved toward the centre, in proportion to the loss of the assay. The number on which it stands, when the balance is restored, will give the produce per cent. or per cwt., according to the first position of the counterpoise.

A beam of this kind is described in the "Annals of Philosophy," a graduated thin slip of deal, the needle fixed on with sealing-wax; but this is rather troublesome to graduate, the polish of the needle is apt to be impaired by the heat, its greater weight also interferes with its delicacy, and a blowpipe bead is very apt to fall off its flat surface. On these accounts the reed beam is an improvement. Brass-plate is, however, where procurable, preferable to tin-plate for the supports; and, still much better, two straight bits of fine glass rod or tube, fixed with cement on the edges of a groove, in a piece of wood of the requisite dimensions.

In making the trough, it will be found most convenient for use if it should be made about a quarter of an inch wide in the centre and rounded away to an eighth of an inch at either end.

An equal weight of transparent glue and very strong vinegar, with one quart of alcohol and a very small quantity of alum, dissolved by means of a water-bath, is said, by M. Böttger, to make an excellent liquid-glue, very useful for uniting fragments of horn, pearl, shell, bone, etc.

**FORCE OF OCEAN SWELLS.**—Some idea of the tremendous power exerted by ocean swells may be inferred from the fact, as reported by Capt. Trask, who has recently returned from the wreck of the Golden Gate, that the massive bower anchor of that ship has been found driven high and dry upon the beach fully seven miles from the locality where the ship was burned! The only portion of the wreck remaining was the forward part of the steamer, just abaft the boilers. Capt. T. does not entertain the slightest idea that any portion of the treasure in the safe will ever be found. About \$300,000, probably in the possession of passengers, has been thrown upon the beach and appropriated by the natives.

## THE WATER BALANCE.

The Territorial *Enterprise* speaks as follows of an ingenious mode of raising ore from some of the shafts in that locality:—

A cheap mode of hoisting ore from the mines is found in the water balance, where a mine is so situated that this means can be employed, and there are doubtless places in the Territory offering conveniences for this plan of working. What is necessary, is a drain tunnel from the bottom of the main shaft, and a stream of an inch or two of water on the hill, that may be brought to the level of the top of the shaft. Having these requisites, two large tubs, or a tank, with whatever contrivance may be deemed most convenient and desirable for hoisting dirt, are suspended in the two compartments of the shaft, by a rope working over a large pulley. Supposing the dirt tub or car to be filled at the bottom of the shaft, the empty water tank is of course at the top. By means of a small hose or spout the water tank is filled till its weight overbalances that of the dirt tub; when, very naturally, the former descends and the latter rises. The dirt tub being emptied, the water in the tank at the opposite end of the rope and bottom of the shaft is drawn off, and flows away by a drain tunnel, allowing the dirt tub to descend to be again filled. Thus the operation goes on, *ad infinitum*, doing the required work at a very small working cost—neither is the first cost of the machinery more than a mere trifle in comparison with the cost of hoisting by steam machinery.

**COTTON AND TOBACCO IN ILLINOIS.**—This year, says the *Call*, has demonstrated beyond a doubt or question that the prairies of Illinois are completely adapted to the cotton plant, and that the climate presents no obstacles to its successful cultivation. Large fields were planted to cotton in April and May last, and they sufficiently matured before the frost came, to be gathered, yielding an average of three hundred pounds per acre. Samples show that the staple is of superior quality, fully equal to the best "upland" that is grown in the most favored cotton districts. Satisfied with the success of this year's planting, companies of gentlemen interested in developing the material prosperity of the State, and individual farmers, are making preparations to commence the cultivation of cotton on a greatly enlarged scale next season. The question of cotton cultivation in Illinois as a new source of wealth, is considered as settled. Estimates by the local papers give 20,000 bales as the yield of the State this year. The crop of tobacco in Illinois is unprecedentedly large. A correspondent says that as much as 2500 hds. will be shipped from Carbondale, a section on the Illinois Central Railroad; and that southern Illinois will send as much tobacco and hemp to market as the whole State of Kentucky. The millions of bushels of grain which the West exports furnish almost the sole medium of exchange for the staples and manufacturers of the old world, and until our political troubles are settled this must continue to be the case.

CONSIDERABLE quantities of cotton have been produced in New Jersey this year. The soil grows as much as 800 pounds to the acre. Before the invention of the cotton gin every New Jersey family raised its own cotton.

THE following method of cutting glass is given in the *Photographic News*, by Alex. Taylor: "In treating of glass, I may give you another way of cutting bottles, shades, or any glass vessel the neat thing you wish, and that is, to get a rod of iron heated to redness, and having filled your vessel the exact height you wish it to be cut, with oil of any kind, you proceed to very gradually dip the red-hot iron into the oil, which, heating all along the surface, suddenly the glass chips and cracks right round, when you can lift off the upper portion clean by the surface of the oil. This never fails, and many a couple of bell glasses have I made in this from a six-pound confection bottle."

THE TURPENTINE MANUFACTORY, to which we alluded in our last as having recently been established in Marysville, is, as we learn from the *Appeal*, owned by Messrs. Wait & Jacobson. The enterprise, thus far promises a complete success. The gum obtained from the foot hill nut-pine answers admirably, and can be easily obtained in sufficient quantities, though it may be necessary to employ Chinese labor to help gather it. The enterprising proprietors will be on hand to secure the premiums offered by the Agricultural Bounty Bill, namely: for the first 10 barrels of rosin made in the State, \$300; for the first 10 barrels of pitch, \$150; for the first 100 gallons of spirits of turpentine, \$250; for the first 1,000 gallons of spirits of turpentine, \$500.

**MUSTARD.**—There was lately shipped from San Francisco 320 bags of mustard seed. The wild article of this country is said to be superior to the best English, and the supply boundless.

## SAN FRANCISCO MINING NOTICES.

**CHARLES CANY MINING Co.**—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING Co.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOSI SILVER MINING Co.**—Annual meeting of Stockholders will be held on the first Monday in January, 1863.

An assessment of four dollars per share was levied on this Company, Dec. 11th, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**MEREDITH GOLD & SILVER MINING Co.**—An assessment of two and a half dollars per share (five dollars per ft) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**RED, WHITE AND BLUE G. & S. M. Co.** levied an assessment of 25 cts per share, on the 10th of Dec. payable within thirty days, office cor. Pine and Montgomery Sts.

**BULLION G. & S. M. Co.**—The Stockholders are notified that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**CEDAR HILL TUNNEL MINING Co.**—Annual Meeting of Stockholders will be held at office, No. 5, over Parrot & Co's Bank, on the 1st Thursday in January.

**SIERRA S. M. Co.** will sell at auction, shares on which arrears may be due on Monday, January 5th, by Duncan & Co.

**NORTON G. & S. M. Co.**—An assessment of two dollars per share was levied Nov. 25, payable on or before Dec. 30th, 1862, at office 522 Montgomery St.

**ADRIATIC G. & S. M. Co.** will hold its annual Meeting of Stockholders on Monday January 5th 1863, at No. 4, Amory Hall.

**WILLOW SPRINGS G. & S. M. Co.**—The annual meeting of Stockholders will be held at 224 Montgomery, on the 29th of December, for election of officers.

**BANNER G. & S. M. Co.** has been duly organized. All claims or interests not presented for examination at office, 522 Montgomery St., on or before Dec. 31st, 1862, will be forever barred.

The first annual meeting of the Stockholders of this Company will be held at their office, Dec. 24th, for the election of Trustees, etc.

**DIOS PADRE G. & S. M. Co.**—An assessment of three dollars per share was levied, Nov. 29th, payable on or before Jan. 1st, 1863, at office 502 Montgomery St.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

**VIBBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

**LIVINGSTON G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

**ISAAC'S G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

**KOHLER G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now payable at office 326 Clay St.

**EL DORADO G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 1st, and payable at office, on N. E. cor. of California and Montgomery Sts., or to Superintendent in Virginia City.

**IOWA MINING Co.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING Co.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**CALEDONIA G. & S. M. Co.**—An assessment of 20 cents per share has been levied by order of Trustees, and all Stockholders neglecting to pay on or before Dec. 22d, will have Stock sold to pay the same on that day, in front of the Post Office, Gold Hill. Office 412 Front St.

**HAWLEY MINING Co.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING Co.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days—At the expiration of which time delinquent Stock will be sold.

**NAPOLION COPPER MINING Co.**—The first annual meeting of this Company will be held at office N. E. corner of Sacramento and Montgomery Sts., on Monday, January 12th 1863, at 8 P. M.

**MADISON G. & S. M. Co.**—The books of this Company are open for issuance and transfer of Stock, at 608 Merchant St.

An assessment of two dollars per share was levied on the Stock of this Company, Nov. 13th, payable at once.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jas. P. Nourse, Sec.

The regular quarterly meeting of this Company will be held at the Company's office, on Wednesday, Dec. 24th 1862.

## WASHOE MINING NOTICES.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Michel.

**COLEDONIA TUNNEL AND MINING Co.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK Co.**, lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

**LA CROSSE MINING Co.**—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 O Street, Virginia City.

**HAWK EYE SILVER MINING Co.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**ASHLAND G. & S. M. Co.**—An assessment of fifty cents per share was levied, Dec. 10, payable at the office of M. J. Power, Sec., B. St.

**INDEPENDENT G. & S. M. Co.**—The annual meeting of this Company, for electing officers, will be held at Galena, on the first Monday in January.

**THE SIERRA NEVADA SILVER MINING Co.** advertise in the Territorial *Enterprise*, 1042 shares of stock for sale for assessments, on Monday, Dec. 29th. Shareholders will do well to look to their interests.

**UNION COMPANY, GOLD HILL.**—An assessment of fifty cents per foot has been levied, payable at the rate of ten cents per foot, Nov. 15, 22, 29; Dec 6, and 13, at the Company's office, Gold Hill.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on O Street, Virginia City.

**NORMAN SILVER MINING Co.**—An assessment of One Dollar per share was levied, Nov. 19th, payable on or before Dec. 31st, to the Superintendent in Virginia City, or at the office, No. 40, Montgomery Street, San Francisco.

**THE SWEENEY Co., Gold Hill,** give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

**MOHEGAN Co., Cedar Hill.**—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, O Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LODGE COMPANY,** give notice that they claim a superior title to the Johnson Co., claiming the same ground so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder.

**BROOMS.**—The California *Farmer*, says there were manufactured in this State last year 480,000 brooms, worth \$150,000.

**SOLVENT FOR OLD PUTTY AND PAINT.**—Soft soap mixed with solution of potash or caustic soda; or pearl ash and slacked lime mixed with sufficient water to form a paste. Either of these laid on with an old brush or rag, and left for some hours, will render it easily removable.

TO MINING COMPANIES.

We earnestly solicit from mining companies and associations the following blank statement, filled according to the data hereby accompanying. The purpose for which we seek this information is important to every citizen and stockholder on this coast; it would also be productive of beneficial results—i. e., inducing capitalists to invest in our mining operations, thereby infusing new life and vigor into business generally in our States and Territories. Little, if anything, is known of our metallic wealth in Europe or the Eastern States, hence we desire as much of the blank filled by you as may be interesting and instructive to the people of this State and those interested abroad.

We know of no mining district in Europe or America where this kind of information is not willingly rendered by parties owning property of this nature; and we know of no better medium for making public the richness of our mines. We shall send blanks to mine and mill proprietors for every quarter, and will gladly publish the contents for the information of the community:

Name of Company and names of officers for the year.	Amount of stock & value per share.	When incorporated

Location.	Average assays of ore.	Process employed and number of stamps.	General remarks.

PALMER, HANSCOMB & CO.,

Golden State Foundry and Machine Works,  
First Street, near Market, San Francisco, Cal.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast.  
San Francisco, November 29, 1862. 3m

Attention! Attention!

TRACT OF LAND, EMBRACING AN AREA OF 400 ACRES, HAS RECENTLY been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey" and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the lot for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it is in the natural progress of improvement soon to be in great demand for use of residence. That this property will increase in value, is as certain as the future of San Francisco. Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the rapid increase of our population. Invest in Real Estate, and you will find it more profitable than investing in old-cut mining stock, or loaning money that may be paid in depreciated coin. Prices for lots in the above tract will remain uniform until after the year—that is, without interest. The title to the land is perfect. Further particulars apply to  
HARVEY S. BROWN,  
No. 19 Naglee's Building.

THE...  
NEW ENGLAND SEWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Gauge and hammer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.

## Mining and Scientific Press.

W. B. EWER, Editor.

SATURDAY ..... DECEMBER 20, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal. at Fifty Cents per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, Designs of every description—Buildings, Sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspapers in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## PROPOSED TAXATION OF THE MINES.

It is well known that a strong effort is being made by some of the leading politicians at Washington, to place a tax upon the mines of the Pacific Coast. The Secretary of the Interior, Mr. Chase, is in favor of either a tax or sale, and in a recent conversation with our representative, Mr. Sargent, as detailed in the Washington correspondence of the Sacramento Union, expressed his opinion that the mines of California could be made to pay the entire debt of the Union. Mr. Sargent urged upon the attention of the Hon. Secretary the manifest injustice of compelling any one interest to be especially taxed for such a purpose. The Secretary was evidently disturbed in his preconceived notions of mining taxation, by the cogent arguments of our representative, and finally referred him to Judge Edmonds, Commissioner of the Land Office, who has been deputed by the Secretary to collect information upon this important matter. The decision of Judge Edmonds will be final so far as the advisory power of the Department is concerned.

Mr. Sargent, with his usual alacrity, lost no time in presenting himself before the Judge, with whom he had a most interesting and important conversation of some hours duration, the result of which was an evident modification of the Commissioner's views upon the matter, and a full agreement upon the two following important propositions:—

First,—That no action of the Government ought to be had by which those now in possession of mining claims, developed by their labor or capital, or purchased by them, should be deprived of their rights.

Second,—That no system ought to be inaugurated that will lessen the production of gold, or be burdensome to the miners.

The Commissioner further agreed that no system of sale should be recommended which would allow the mines to fall into the hands of speculators. He expressed a desire to foster the mining interest on its present basis, at least so far as to enable men of small means to engage in it, as now. He favored the idea of a license system, or percentage on the gross product. Mr Sargent promptly urged the injustice and impolicy of taxing anything more than the net profits, and also reminded the Commissioner that even that was now reached by the three per cent income tax. That fact did not appear to have been previously comprehended by the Commissioner! He remarked, however, that it should be considered.

As the Commissioner was inflexible in the opinion that the mines must be made to yield a special revenue, Mr. Sargent made it his chief aim to effect, to the greatest possible extent, a modification of the measures to be proposed for the action of Congress. Having accomplished what he could directly, he then urged upon the Commissioner the propriety, before coming to any final conclusion in the premises, of paying a visit to California, and making a personal examination of the mines, and mingling and conversing freely with the miners themselves and our people generally, and thus learning for himself the peculiar and anomalous condition of our mining community. The necessity of such a trip

to arrive at a correct knowledge as a basis upon which to act in so important a matter, appears to have been most successfully urged, as the Commissioner is reported, in his reply, to have expressed himself favorably as to the proposition; hence we may reasonably expect a visit from him at an early day, and rely with much confidence upon the presumption that no legislation with regard to the mines will be advised by the Government, until the matter has been thoroughly enquired into.

The reported action of Senator Latham, elsewhere referred to in our issue, to-day, will not be likely to result in anything definite during this pendency of the proposed advisory action of the Government. Too much credit cannot be awarded to our vigilant mining representative, for the energy and diligence he uniformly displays in looking after the interests of his constituents.

**TUNNELING IN WASHOE.**—Deep tunnelling and other heavy enterprises are becoming quite common in Washoe, in connection with operations hitherto considered of doubtful value, while, at the same time the old tunnels are being pushed forward with renewed vigor. The Gould and Curry tunnel has now been driven in 1,350 feet—to midway between B and C Street. Two thirds of this distance is through rock which does not require timbering. The ground is now getting soft and wet, and the drifters are evidently approaching the main Comstock Lead, which the engineers expect to reach within 150 feet and at a depth of 550 feet below the surface. Important developments are expected to be made when this work is completed. The Latrobe tunnel is progressing at fair speed, the ground becoming softer as the drifters advance. The Mount Davidson Company are still at work, and the long tunnel of the El Dorado, immediately south of the Mount Davidson, it is said will be pushed to the Montour Ledge, inside of three months. Work upon the Cedar Hill tunnel is also being vigorously prosecuted, and large expectations of important results are freely indulged in.

The old Whitman Tunnel, in the Palmyra District, upon which work has been suspended for several months, is again resonant with the sound of the pick and hammer. This tunnel was driven to the distance of about 1500 feet, over one year ago, when work was suspended in consequence of the ledge which was struck being somewhat broken and of doubtful value. Since work has been recommenced, the drifters have found better ore. They are now taking out rock which is said to pay at the rate of \$100 in silver to the ton, and are in daily expectation from present appearances of something better. The silver exists here in the chloride and sulphate form, and in patches, not being found pure, or intermixed with gold.

**COAL AND IRON IN ESMERALDA.**—E. M. Smith and J. F. McFarland, formerly of Stockton, but at present largely interested in mining operations on the other side of the mountains, have presented the Editor of the Sonora Flag with specimens of the coal and iron from the Juniata mines at Esmeralda, in which they are interested. The iron ore is a protoxide, a very rich and rare ore. These gentlemen assure us that there is a whole mountain of this ore on their company's claim. The coal, as it is called, in our opinion, is a sort of petrified mineral pitch. It is very inflammable, and generates a great heat. Its discovery in that section of the State is most opportune. The Juniata Coal Mining Company, organized to work this new discovery, is regularly incorporated, with a capital stock of \$500,000. Of this Company, C. W. Kendall, F. Goodell and Albert Mack, all old residents of Tuolumne county, are the Trustees.

THE Journal of the Franklin Institute states, that "by incorporating into melted steel from two to five per cent. of Tungsten, there is obtained a steel which is, very dense, hard, and strong—admirably fitted for the manufacture of tools. The instruments made with this Tungsten steel are said to keep their temper four times as long as usual."

**MINING STOCK SALE.**—A sale of 1042 shares of Stock in the Sierra Nevada Silver Mining Company, is advertised, in the Territorial Enterprise, for sale to pay assessments to the amount of \$10,211. The Stock belongs to 57 different persons and will be sold on Monday, Dec 29, by John Middleton, at the Company's office, No. 40, Montgomery street.

## INTERESTING EXPERIMENTS IN QUARTZ MINING.

A Mr. Porter, engaged in quartz mining at Italian Gulley, near Ballarat. New South Wales has been experimenting upon tailings from his mill in the following manner. He placed 76 lbs. of quicksilver in the bottom of a large retort, and then placed upon the quicksilver 225 lbs of tailings. The retort was then carefully closed, and placed upon a furnace till the quicksilver was all vaporized. It is argued that in this manner the quicksilver is brought into immediate contact with every particle of gold which was contained in the sand. The result alleged to have been obtained from this experiment was so great, that, it is claimed if the same can be obtained on tons as was here secured on hundred weight, it will be difficult to give even an approximate estimate of the increase to which the production of gold from quartz may be carried. At all events the excitement was so great, in the immediate neighborhood, as to cause a perceptible advance in the price of quicksilver! This experiment was announced in the London (Eng.) Mechanics Magazine, nearly a year ago. Whether it has resulted in any practical utility by experiments on a larger scale, we are not informed.

It is a fact, however, quite patent to all engaged in extracting gold from quartz, that a very large percentage of the precious metal is lost in the bungling processes generally employed in California, even in the most approved mills and plans for working gold quartz. During a recent visit to Grass Valley, in Nevada county, we were placed in possession of certain alleged facts, which, if correct, are certainly of the greatest importance.

While we were there the mill which has recently been fitted up in that place for working silver was made in readiness for running. The proprietors, before putting in any the silver ore concluded to run it for a day upon some red rock, which lay near by, and was supposed to contain but small quantity of gold. The rock was known to be such would not pay for crushing in the ordinary way for working gold; as a considerable quantity of precisely the same of rock had been already crushed with a yield below the average rate. It was thought, however, that there might be gold enough in it to charge the quicksilver, at least it would serve to scour up the pans, etc., and put the rock in good order to receive the rich ore which they were intended to work from the newly discovered silver mines. Eight tons were put through the mill, and to the amount of every one, when the pans were cleaned up they exceeded \$35 to the ton! We were assured that this could be no mistake in the correctness of this experiment, and results since obtained from similar rock from the vein, whence the poor rock above alluded to was taken, fully verified the first result. If there is no mistake in regard to this experiment, we are on the eve of the most important era in gold quartz mining yet attained, which will work a complete revolution in that branch of industry, in California, and bring into high value the leads throughout the State, which have hitherto been considered as entirely worthless. We hope soon to meet something still more definite in regard to the results obtained from the application of this new silver process to the working of gold.

This mill is fitted up for working with the Sedgwick process—a process, which, so far as we have heard, has never been used by any other than the Ophir mine, at Washoe; and although it has been considered, we who claim to have knowledge of it, as not altogether the best for silver, is nevertheless, we believe, acknowledged to be highly efficient for gold working. We can only estimate the extraordinary yield above alluded to as the result of its superior saving efficiency.

**GOULD & CURRY MINING COMPANY.**—At a meeting of the stockholders of the Gould & Curry Company, held on the 15th instant, the following were elected, viz: John O. Marl, Thomas Bell, Bull, A. T. Lawton, A. B. McCreavy, William M. de George Hearst. At a subsequent meeting of the Company Earl was elected President. The affairs of the Company were represented to be in a flourishing and prosperous condition.

**SILVER ORE.**—Eighty bags of Mexican ore was brought up by the Oregon on her last trip tested here.

## MINING NOTABILIA.

A correspondent from Grass Valley gives us encouraging reports of the progress of the work at the Grass Valley Silver Mines. The mill is kept constantly running with equally satisfactory results as those reported at the first "clean up." The Central Company were to have commenced raising rock on Monday last. The Green Horn Company is expecting to strike it richer than ever when they get up with their tunnel. The Stonewall Company, on another ledge, near by are driving a tunnel to strike their ledge about thirty feet below the surface. Our correspondent is sanguine in the belief that this new silver district will soon be developed to such an extent as to compare favourably with Washoe.

**FREMONT'S ESTATE.**—A recent telegraphic dispatch from St. Louis states that Fremont has negotiations on foot to sell his Mariposa Estate to a large New York Stock Company—and that he will receive a sum sufficient to pay off his debts and have a million or two to spare.

**THE WIDE WEST MINE.**—A correspondent of the S. F. News Letter has examined one and a half tons of ore from this mine, which appears to be very rich. It was to have been worked in a few days, with some four tons more then on the way to a mill. This crushing will probably fix the value of the mine, and prove whether or not, the indications of its fabulous richness are reliable. Other important developments are expected in that vicinity.

**MRS. HALL'S FURNACE.**—Mr. C. P. Duane, Agt. for Mrs. Hall, is now in Washoe and making arrangements for the erection, on a large scale, of one of these Furnaces, near Virginia City, when the practicability of this new invention will be fairly tested. By the usual modes of smelting ore now in use, about 100 bushels of coal are required to reduce a ton of ore. By this furnace it is claimed that the same work may be accomplished by the use of *six* bushels. Should but a small part of what is claimed for this invention be realized, it will prove, not only a fortune for the lady inventor, but a most valuable acquisition to California and the world.

**THE SHEBA MINE.**—A large specimen of silver ore from the Sheba Mine, Humboldt District, has been taken to Virginia City and placed on exhibition there. It is some three feet long, fifteen inches wide and ten inches thick, with veins of pure silver branching through it in various directions. Another specimen of nearly equal size and thickness, was also brought in. We trust the mine may ever continue to abound in just such specimens.

**NEW DEVELOPMENT.**—It is said that the Utah Company, Virginia City, have struck good rock. If this proves true, it will inspire new confidence in the extent of the Comstock ledge. This Company, it is pretty generally believed, are working on that ledge, which will no doubt, incite renewed energy in the development of claims lying between these and others known to be on the Comstock lead.

**MORE COAL.**—Another coal discovery is reported in Oregon, about eight miles from Jacksonville, on Stewarts Creek. The coal is said to be found there in great quantities.

**SINGULAR GOLD INDICATIONS.**—On the Hughes Claim, near Copperopolis, a kind of rock is found much resembling "clinker," a substance abundantly produced in furnaces where hard coal is used. Imbedded in this clinker like substance are found small globules of gold—the entire appearance, no doubt having been produced by intense subterranean heat.

## [COMMUNICATED.]

"NEMO ME IMPUNE LACESSIT."—If there is anything the soft headed editor of the Mountain Messenger requires it is what is commonly called "brains." We refer that individual to our list of subscribers of leading officials, merchants, manufacturers and professional men, as published in to-day's *Scientific Press*, who we assert are in every respect better qualified for thinking or reasoning, than the editor aforesaid. We advise him, that if his ill disposition will not allow him him to help a good cause, to refrain at least from trying to intimidate it. If we had many such sluggards as the quasi editor of the *Messenger*, California would indeed soon sink into insignificance. "*Nemo me impune lacessit.*" J. S.

**CHANGE OF PUBLICATION DAY.**—The Publication day of the *Press* will hereafter be on Monday instead of Saturday, as heretofore.

## A MINING BILL.

The telegraph has announced the fact that Senator Latham has introduced into Congress a Bill intended to govern all mining operations, whether in California or on the Eastern Slope. The announcement appears to have been quite unexpected in this state, and naturally enough, creates considerable curiosity if not an actual interest to know what may be the provisions of this new mining Bill. It is possible that this Bill may have for its object the raising of revenue merely, as contemplated by Secretary Chase, and elsewhere alluded to in our columns to-day, although the wording of the dispatch would seem to imply another object, referring more particularly to the internal police of the mines. Californians have ever expressed the desire that there should be no legislation regulating the mines on the Pacific Coast. We have got along very well for some ten or twelve years under the "Rules and Regulations" adopted in our various mining localities, and very satisfactorily interpreted by our courts. Perhaps Mr. Latham may have devised some new method of managing the complicated mining interests of the Pacific Coast, which shall exactly suit the wants and necessities of the people. But the miners are, at all events, desirous of learning upon what basis our distinguished Senator would hereafter place these interests, and in the absence of such knowledge are very fearful that, should any change in our policy be made, we shall all soon have occasion to regret that we had not "let well enough alone." To our comprehension it appears as though our national legislators had full enough to do without attempting to disturb a system which certainly works well for the time being and any interference with which, we greatly fear will result in nothing but mischief and disaster.

## THE OPHIR COMPANY.

The Ophir Company has closed with Garrison & Co., for the purchase of the Old Virginia Lead and the settlement of the pending suit between the two Companies. The Virginia City *Union* says that orders have been received in that place directing the agents of the Old Virginia Company to pass over to the Ophir Co., the stock, books, etc. of that concern. The Virginia is no doubt a valuable mine, and probably well worth the money to be paid, aside from the important consideration of a final settlement of all matters now in litigation or likely to come up hereafter as to adverse title.

The receipts of this Company for the year ending Dec. 1st, 1862, have been \$1,680,000. The working expenses of the mine, during the same period, has been \$746,000. Expenses for extension of milling works, \$80,000, supplies on hand \$250,000, cash in Treasury \$134,000.

At the annual meeting the stockholders held on the 8th inst., the following were elected as Trustees: Joseph Woodworth, Charles F. Lott, Donald Davidson; J. M. Livingston, A. E. Davis, Edward Martin and James W. White. At a meeting of the Trustees held subsequently, James W. White was elected President, and Thomas J. Lamb, Secretary.

**AMENDE HONORABLE.**—Several notices respecting mining affairs as published in the *Press* last week should have been credited to the Virginia City *Daily Union*, a very excellent and valuable Journal with Dr. Henry Degroot as its editor.

**THE COPPEROPOLIS RAILROAD.**—Fifty-fifty thousand one hundred dollars has been subscribed in Stockton to the capital stock of the Copperopolis Railroad.

Our imagination is likely to make our case worse or better than it is.

## Mining Stock Report.

SAN FRANCISCO, Dec. 19th, 1862.

The mining market at the present dates is steady with a moderate amount of business, including stocks. The passage of the Corporation Bill in the Nevada Legislature, and the probability of its receiving the governor's signature is beginning simply to effect low priced stocks.

Ophir shares are in demand, with but little stock in the market. Only 124 shares were reported in Sanborn's Circular, as sold last week, against 468 the week before. It can readily be disposed of for \$2500 to \$2650. At the Meeting of Stockholders, elsewhere noticed, an entire new board of Trustees was elected, with the exception of C. A. Lott, who is continued.

Gould & Curry still continues to advance and has finally reached the highest figure in the market, although it has not yet declared a dividend. It is firm at \$2600 cash.

Chollar still remains buoyant, having held its advance of last week and is

quite firm at \$350. Holders are confident of realizing \$100 advance on present quotations by the 1st of January next.

Central is quoted at \$1400—a slight depreciation.

California is quoted at \$1,200.

Potosi has been but little enquired for. Small transactions are quoted at from \$50 to \$75—a decline of \$20.

North Potosi is quoted at \$60—offered at \$7.

Sierra Nevada is quoted at from \$60 to \$75. 75 shares changed hands last week.

Daney is quoted at \$100 bid.—200 asked.

Burning Moscow is quoted at from \$80 to \$82½.

Mount Davidson—100 shares changed hands at from \$8 to \$8½—a slight advance.

Meredith is firm at \$20.

Burnside is quoted at \$16.

Iowa is quoted at \$130.

Norton is quoted at from \$13 to \$17—a slight falling off.

Sacramento is quoted at from \$20 to \$24—\$30 is asked.

Lucerno is not quoted.

Hale and Norcross is quoted at \$250—\$300 asked. In the Bulletin's Stock Report of yesterday it was quoted as sold at \$415—\$450 asked.

Rogers quoted at \$22½ bids—\$27 asked.

Lady Bryan—quoted at \$3.

## Esmeralda Stocks.

The Wide West is still advancing, and is quoted at from \$405 to \$415—\$420 is generally asked.

Antelope is quoted at \$100—with \$110 asked.

Atlas is not quoted. \$8 is asked.

Silver Hill is quoted this week at from 12 to 15 dollars—\$18 asked.

Utah has buyers at \$20—held at \$30.

Real Del Monte quoted at \$25 with \$30 asked. An advance of \$5.

## Coso Stocks.

The Josephine had bidders, the past week, at the Stock Board at from \$15 to \$15½—Holders asking \$20 to \$25.

Coso—\$20 asked.

Willow Springs—held at \$15.

## Mexican Mines.

St. Nicholas Silver Mining Co. is quoted by Sanborn's Circular at \$100.

Mina Prieta finds no recent buyers, but is held firm at \$110.

Dios Padre is quoted at from 30 to 33 dollars.

## WASHOE STOCK REPORT.

[Compiled from the Daily Territorial Enterprise.]

The stormy and threatening weather of last week, rendering our existence quite uncomfortable, seems also to have exerted a depressing influence on stock transactions. It is most probable, however, that the confidence which holders feel in the increasing value of the mines, generally, has more influence upon stocks than either the weather or the apprehensions of buyers. Prices are steadily advancing, and holders are firm, two facts which argue a healthy confidence in the substantial wealth of the principal mining operations now in process of development.

Deep tunnel and other heavy mining enterprises are becoming quite common in connection with explorations hitherto considered of doubtful value, while the old tunnels are being pushed forward with renewed vigor.

Very few of the sales now being quoted are at figures which fairly represent the value of the ground conveyed.

The Pride of the West is said to be taking out the best rock from their mine that has ever been struck in the Devil's G to District. This claim shows a degree of permanency which no other in that district has yet reached. Claims in Nigger Ravine, of this district, are beginning to attract considerable attention among buyers. Prospecting has again commenced here with renewed energy. Much of the stock, however, which is now crowding the market, from this locality, is not regarded with much favor, and few seem disposed to operate in it at any price. Two years ago the ledges of that district were largely dealt in, but developments, generally felt so far short of the general expectation, that capital now avoids the locality with almost too much severity.

Accounts from Palmyra continue to be of the most encouraging character. This District will, no doubt, prove a source of wealth to many who have long continued to prospect there with little encouragement.

One hundred and thirty feet of Humboldt stock sold, last week, at an average price of \$5.50, in small lots, ranging from ten to thirty feet.

Five Dollars is offered for Union, Gold Hill. The rock now being taken from this claim, is of a much better quality than any heretofore taken from their mine.

A small lot of Waterhouse sold at \$3.50.

Several small sales have taken place in Gold Hill at low figures.

The Nevada seems to be attracting less attention than heretofore, although favorable accounts continue to come in from those claims.

Caledonia is enquired for at low figures. This Company has struck a very formidable ledge in their tunnel, which is also being run for several other ledges, which are supposed to exist further into the hill.

The North American frequently changes hands among the members of the Company, though but little is offered for sale in the market.

Baltic is offered at \$25 per foot; Ashland at \$10; Zouave offered at \$10 but withdrawn.

Baltic and Uncle Sam have been in the market, the past week, at \$20; Cole at \$20; Oriental at \$4; Meredith at \$15; Sacramento is enquired for but none offered.

Santa Rita is in market at \$42, and El Dorado at \$65.

Cedar Hill Tunnel is offered at \$5.50; Dargan at \$4; Gov. Nye at 7.

There was but little demand for anything, the past week, although almost anything could have been sold at a trifle less than the rates asked.

The following stocks, not enumerated above, are in the market in Virginia City, and held at the figures annexed—

Santa Fe	25 00	Summit	36 00
Empire	6 00	Washington Leds	6 00
McBee	25 00	Milton	20 00
Beivider	15 00	Laboring	15 00
Poytona	25 00	Swezey	15 00
Dargan	4 50	Caledonia	8 00
El Dorado	70 00	St. George	3 00

## GIFTS, DONATIONS AND SUBSCRIPTIONS

## Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

## PROSPECTUS TO THE PEOPLE OF THE STATE OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hither from England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our Government—to marine conveyances—the merchant—the manufacturer, the mining companies and professional community, cannot but be beneficial, provided the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Pre-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have we the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils, also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay these several important features before our people through the Mining and Scientific Press, and the work he hereby offers. But the most important subject in his mission is the inducements he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the counting house, to the professional man and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

je20

JOHN WRIGHT, 511 Market street, Opposite Battery, San Francisco.

## LEWIS COFFEY &amp; RISDON'S

## STEAM BOILER AND SHEET IRON WORKS.

The only exclusively Locomotive Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work or the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner of Bush and Market Streets.

Opposite Oriental Hotel, San Francisco, Cal. J. N. RISDON

Nos. 121, 123 and 125 California street.

**RECENT PATENTS.**—Granted to CALIFORNIA INVENTORS through the Pacific Patent Agency, J. SILVERSMITH, Solicitor:

**HERMAN CAMP.**—Patent for Quartz Crusher and Amalgamator.

**W. H. RICHARDSON.**—Patent granted for Washing Machine.

**E. E. MATTESON, Nevada:** Hydraulic Derrick. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

**ELANDER HEATH, San Francisco.** Spiral Spine and Sage Mill. See "Mining and Scientific Press," June 4th, 1862, Vol. V., No. XIII.

**G. F. DEETKEN, formerly of Nevada:** Apparatus for separating Gold from Pyrites. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D has recently established himself in this county, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

## Routes and Fares from San Francisco to Foreign and Domestic cities.

**Pacific Mail Steamship Company.**—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

**Nicaragua Steamship line, Ross, Dempster & Co., agents.**—Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

**California Steam Navigation Company** dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petauma, \$3.

**Overland Mail Company.**—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and a proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone." "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consist ent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE.—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA connecting via the Panama Railroad with the steamers of the Atlantic and Pacific Steamship Company at Aspinwall.

#### FOR PANAMA,

The following Steamships will be dispatched in the month of December 1892  
" 20th—SONORA, W. F. Lapidge, Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

#### REMOVAL.

**OFFICE OF THE PACIFIC METALLURGICAL WORKS**  
is removed to 318 California Street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.  
Gold and Silver ore, and Sulphuret Assayers, or Silversmiths' sweepings reduced or reclaimed.

**COPPER ORES**—Highest market rates advanced in cash, for shipments.  
S. C. BRADSHAW, Agent,  
318 California street, near Sansome, up stairs.

#### LABOR-SAVING

#### Rock Drilling Machines.

**TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRYMEN.**  
The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

HAND, HORSE, AND

#### STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to W. W. DENN,  
Oct-3m] Fremont street, bet. Market and Mission, San Francisco.

F. G. BEPLER,

#### PRACTICAL COPPERSMITH,

No. 118 (Old No. 22) Bush street,

Between Sansome and Battery,

SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work.

All orders from the country promptly attended to.

Je6

#### 50 lbs. MARINE AND FIRE-PROOF PAINT

**MANUFACTURED BY THE PACIFIC METALLURGICAL WORKS, IN THIS CITY, for Hulls and Decks of Vessels, from ground Mineral Rock containing Arsenic, Copper, Litharge and six other Minerals.** When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

#### DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

#### 25 lbs. Fire-Proof Paint,

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

#### DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil; if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead, mix with Linseed oil. Put it thick on a tin Roof, as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. FORTGE, Superintendent.

WORKS, North Beach; Office, 318 California st.,

#### V. SQUARZA'S

#### PUNCH FACTORY.

WE PRESENT HEREWITH THE PORTRAIT AND TRADE MARK OF the gentleman who heads this article. Mr. Squarza is favorably known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is an expert in the chemo-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,	Anisette,
Cognac do.	Whisky do.	Kirschwasser,
Arae do.	Kirschwasser do.	Brandy Cocktail,
Anti-Divorce Punch,	Cocoa do.	Anti-Dyspepsia Bitters,
Coffee do.	—	Appetiser,
Tea do.	Morning Comfort,	Ladies' Tears.
Pineapple	Kuemmel,	

And CHAMPAGNES of all brands.

#### Dr. Van Zandt, Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity!  
Made Subservient for the Cure of all Nervous and Spinal Diseases.

**THAT THIS PRINCIPLE**, successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanting by physicians, to add their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

#### Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equilibrium of health be broken, or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting, and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

#### Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

#### No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRIC excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

#### To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human life—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complaints which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wasted energy of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

#### Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and listlessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

#### All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or caustic habit of body,

#### None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—dissipation of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

#### The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon on our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29-3m

#### FREDERICK KESMODEL, Cutler and Surgical Instrument Maker

517 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1893, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,

Inventor and Patentee.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine.....3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts " "  
 " " 750-1000ths to 950-1000ths " .14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts. " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

In regard to the deposits of *Washoe silver*, the rule will hereafter be, that the value of gold contained in the same will be paid in gold coin, and the value of silver in silver coin. The value of the silver will be calculated at \$1.21 per standard oz., and is exempted from the coinage charge, unless deposited for silver dollars, in which case a charge of  $\frac{1}{2}$  per cent. will be made additional. Bullion of the above denomination will be entered on the gold and silver register, as most congruous with the physical aspects of the material, but in the warrant it must be marked that so much is to be paid in gold and so much in silver, according to the contents reported by the assayer. The above rules, and charges were promulgated on July 10th, by Superintendent Robert J. Stevens.

U. S. BRANCH MINT, Nov. 6th, 1861.

On and after the 15th inst., a charge varying in accordance and the character of the deposit, from half a cent to three cents per oz., gross, in addition to the general rates, and be imposed on all bullion deposited for coinage or manufacture, which will require toughening or extra refining to render it suitable for mint purposes.

ROBT. J. STEVENS, Superintendent.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

PACIFIC PATENT AGENCY....J. SILVEESMITH,  
 SOLICITOR.

## MINING AND SCIENTIFIC PRESS.

## THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

## The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

## The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

## The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

To Chemists, Architects, Millwrights and Farmers! This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

## Terms.

To mail subscribers:—Four Dollars per annum.

## Club Rates.

Five Copies for Six Months, \$8.  
 Ten Copies for Six Months, \$16.  
 Ten Copies for Twelve Months, \$30.  
 Fifteen Copies for Twelve Months, \$44.  
 Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 50. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

## W. B. EVER, Publisher,

CORNS AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

We subscribe ourselves yours,  
 Rev W. Stanton, L.L.D.,  
 Richard A. Vaux,  
 Dr. Straud, M.D.,  
 Dr. Loomis, M.D.,  
 Cleopole Stevens, M.D.,  
 Samuel Poncest, M.D.,  
 Walter C. Foster, M.D.,  
 S. W. Howard, Att'y at Law,  
 Pierce Butler,  
 Henry B. Linton, M.D.,  
 Wm. L. Howard, M.D.,  
 Philippe Lity, M.D.,  
 Myers Davis, M.D.,  
 W. M. Thompson, M.D. and others.

No. 718 Catherine street—this is to certify that Dr. Kennedy has removed corns and bunions off my feet, which have annoyed me for years. He also removed a cancer from my middle finger, which I had no use of for a period of six months. I cordially commend him to the suffering humanity of Philadelphia as a skillful surgeon. MRS. J. W. HAMMOND.

From Dr. W. L. Stevens: Dr. Kennedy has operated upon my feet, and has effectually cured me of some torturing pests that I have been annoyed with for years.

From the Rev. Walter M. Thompson: This is to certify that while sojourning in Philadelphia, Dr. Kennedy has operated on three of my family to my entire satisfaction.

From the Hon. Wm. M. Thorne, ex-member of the Ohio Legislature: This is to certify that I called on Dr. Kennedy to operate on my feet: He displayed great skill as a surgeon, and I am satisfied that he has effectually cured me of those torturing pests which have annoyed me for many years.

From Geo. F. Omerly, 637 Arch street: This is to certify that I called on Dr. Kennedy. He has operated on my feet to my entire satisfaction. au21

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI.

SAN FRANCISCO, MONDAY, DECEMBER 29, 1862.

NO. 9.

THE upper of the three accompanying engravings represents a perspective view of a new amalgamator recently patented by Mr. Zenas Wheeler, of this city, as it appears when at work.

The engraving upon the left represents the amalgamator opened. In the bottom of the pan M are seen the dies L L L L L. The inclined spiral ledges K K on the side of the pan are designed to create an upward current of the pulp by which it is forced again to the centre of the top of the muller, and thence through a proper opening, underneath the same, for re-grinding. This current is kept up, so long as the machinery is in motion, and by thus constantly changing the particles, every portion of the ore is soon reduced to an impalpable powder, and in much less time than by the ordinary mullers, where no such current is established. The letters G G G G represent the muller raised from its place in the bottom of the pan with the face turned toward the observer, exhibiting a set of shoes, which, like those in the bottom of the pan, are also moveable, and may be readily replaced when worn out. The letters I I represent supports for the stationary wings D D D as represented in the engraving upon the right. The office of these wings is to aid in forcing the current of ore to the center of the pan as described above.

A, in the engraving upon the right represents the support of the inner end of the wings which are adjustable by the screw H upon the top of the shaft C. B is the driver which carries the muller E. G G represent

an end view of the shoes on the face of the muller. F F are inclined spiral threads on the outer edge of the muller, which in connection with the spiral ledges on the pan create the upward current as before described.

The steam pipes represented upon the left of the upper figure are designed—the lower one to carry steam to the steam chamber, beneath the bottom of the pan for heating the pulp, and the upper one to convey the steam directly to the pulp in the pan.

WE would call the especial attention of readers to the article on our second page under the head of "Electricity in Medical Practice." After reading that they will lose nothing by perusing the advertisement of Dr. J. W. Vau Zandt, on the seventh page. We would also take occasion to say that the article alluded to has not been prepared at the suggestion of the Doctor, but solely with reference to the importance of the subject in a scientific and hygienic point of view. Should any of our readers, either medical or otherwise, entertain views opposed to those therein set forth, we should be pleased to hear from them, and will most cheerfully accord them room in our columns.

THERE are at present in San Francisco five institutions in which Catholic youth are educated in the best and most complete manner, free of cost to their parents.

**WELDING IRON IN VACUO.**—In a communication to the Academy of Sciences, at Paris M. Faye, according to *Galignani*, has given the following account of some experiments, in which M. Rahmkorff took part. An iron wire was cut in two, and the ends brought into contact without any mechanical pressure: this done, by means of an electrical current the wires were heated to a dark red *in vacuo*, and they were thus instantaneously welded together. The wires were at an angle of 150 degrees; and yet, with that inclination, they supported a weight of upward of three kilograms, before breaking at the point where the welding had been effected. The same experiment, made in the open air, by way of a counter-proof, led to no result. Encouraged by this success, M. Faye heated a thick iron cylinder *in vacuo*: it had been sawed in two, and the parts then joined together by two screws. The latter having inadvertently been made of brass, they began to melt during the heating process; but although but a very small portion of the metal had actually become fluid, it penetrated by capillary attraction, aided by the vacuum, into the smallest fissures, soldering the two pieces with extraordinary nicety.

**SILVER IN TUOLUMNE.**—Reist & Co., proprietors of an extensive quartz mill and a rich vein near Rawhide Ranch, in Tuolumne county, are putting up an improved apparatus for extracting the silver from the ore found in their rock. They have lately ascertained that their rock is nearly as rich in silver as in gold.

## Electricity in Medical Practice.

Among the many new and wonderful applications of Electricity, that of its recent use in the practice of medicine, is not the least important to the world. That this principle can be successfully applied to diseased states of the system, in a large portion of the diseases to which human nature is more or less frequently subjected, is beginning to be quite apparent to medical practitioners. That it is destined at an early day to be received as the great-looked-for necessity, to aid medicine in overcoming organic and functional derangement, and render its effect uniform and reliable, is becoming more and more apparent in the minds of all practicing physicians, who are willing to allow that every attainable truth with regard to medical practice has not already been discovered, and years ago reduced to practice and recorded in books of medical science.

"It is now established, beyond a doubt, in the minds of all liberal practitioners, that the muscular contractions, which give action to a living limb or organ, correspond to currents of electricity existing there in appreciable quantities. That electricity is the living essence, that it is the vitality of all vitalities, that it is the great imponderable, subtle, circulating principle of life can be no longer questioned. In animal life the brain being the great battery, the nerve-cords, its conductors, pass from it and the spinal cord to every organ, tissue, vein and artery, running along with the great circulation of blood, imparting by its way its vitality, which enables the assimilation of all the principles going to sustain life, each to its proper tissue of the body.

If this is essential to life, how can diseased states of the system respond to medical agencies, when the great conducting, essential, and life-maintaining principle—Electricity—is not present or is broken in its current, or is wanting in its proper and healthy equilibrium? Surely the part must die without this great life-giving agency is first restored; and when once alive, when the healthy current is restored, vitality is restored and the response of nature inevitable to the agencies used for the relief of disease.

How often do we see the excited mind cure the suffering body. The sway of will thoroughly stirred into action often transcends the curative power of medicine; and what is this excited mind and sway of will, but the electro-magnetic forces of the battery of the brain, arousing and bringing into life the restoration of that absolute and requisite nervous fluid, upon which alone the energies of all parts of the system have being.

Who has not seen—what physician has not witnessed the death of men and women, when in their own minds they felt they could give no reason for such decease: that an examination after death would show no cause? Take for example the late decease of a certain bold and great original surgeon of this city. What did the faculty say? Why some were of opinion it was softening of the brain; and what is softening of the brain but the destruction of the nerve matter? All witnessed his life pass away, his usefulness abridged—all saw his sight stricken from him in a moment, and again restored after a time—that he was attended by the most eminent and skillful physicians of our city, and he died worn out—the great battery of nature was deranged in its action, the nerve cords of his body which course side by side with the arteries and veins to every organ and tissue, whose proper function and office it is to vitalize and give life to the properties of the blood, had ceased their office; for the reason that the great FOUNTAIN OF ELECTRICITY, the battery of the brain, was destroyed, its equilibrium was lost, its action perverted—and however correct the diagnosis of his attendants, his body could give no answer in response to medicines, for the great fountain of life ceased to enforce that energy necessary to the carrying on of health."

Thousands of lives go quietly out, every year, from nameless causes, which baffle every effort of the skillful physician—his medicines refusing to produce their usual effects, from causes entirely beyond the reach of his knowledge. In most cases of this character the experience of those who have adopted the modern theory of the electro-magnetic and galvanic action constantly going on in the healthy system, tells them that the great disturbing cause is the diseased condition of the brain-battery and its attendant nerve-cords or conductors which can be reached and re-vivified only by an artificial application of this great life-giving agent. The theory of Electro-galvanic treatment of disease, as an adjuvant

or aid to medicine is rapidly gaining ground. The everyday experience of those who employ this agent in a liberal and judicious manner, is convincing in its effect, and conclusive of the important fact that it matters not from what cause disease originates, or how obstinate the case, nor of how long standing; recovery by this mode of treatment, is more certain and more speedy than by any other—for the electric current will arouse the system from the depression caused by disease, which may have baffled the skill of eminent Surgeons; to place it within the reach of ordinary medicines.

## COPPER.

An occasional correspondent of the *Alta*, of this city, recently gave a detailed account of the copper mines of Calaveras county, from which we condense as follows:

There are two principal copper districts in this county, divided by a low course of hills, but both in the same range. The one is known as Copperopolis, located about thirty five miles from Stockton; the other is known as the Gopher district near Telegraph City, about twenty-nine miles from Stockton. The two localities are in some degree rivals.

## COPPEROPOLIS DISTRICT.

The "Union," and "Keystone" are the two principal mines in this district. Then comes the "Empire," the "Calaveras," the "Webster," the "Kentucky," etc.

THE UNION MINE is taking out ore at the rate of twenty to twenty-five tons per day, fifteen of which they are sending to this city for shipment. The Company is formed of thirteen shares of 150 feet each, principally owned by Lolor, Meader & Co., and their Boston correspondents. The ore averages 20 per cent., and a dividend of eleven thousand dollars per share will be declared next [this] month. This mine employs 110 men and has very extensive improvements.

THE KEYSTONE MINE is shipping about one hundred tons per month. It is incorporated, with Mandeville, the late Surveyor General, as President. The shares of one hundred and fifty feet are held at a high figure.

OTHER COPPEROPOLIS MINES.—The Empire is believed to be a continuation of the Union lode. It is being thoroughly prospected, but is not yet upon the copper. The Webster, Kentucky, Calaveras, etc., are all in the same position, and offering every inducement for continued workings.

These mines about constitute the strength of the Copperopolis district. The Union is, of course, the back-bone, and gives employment to a great number of miners, timber cutters, teamsters, etc. It is being admirably developed under the superintendence of Captain Hardy, and bids fair to be worth millions of dollars at an early day.

## THE GOPHER DISTRICT.

The mines of this district are six miles nearer Stockton than the Copperopolis belt. A long mountain road is avoided, and a saving of two dollars per ton effected in hauling the ore.

The Napoleon Mine is located in the Gopher district one and a half miles South of Telegraph City. It is the principal mine in the district, and the only one regularly shipping ore. It holds 2700 feet upon the ledge, is incorporated and is being developed with an energy and ability seldom equalled in mining operations. A village has sprung up around it; and the Company's houses, machine shops and steam works have gone up like magic.

It is stated that A. J. Moulder, the present Superintendent of Public Instruction, is to be the Superintendent after the first of January. Mr. Moulder is a thorough engineer, and the mine cannot fail to succeed under his management. The Company is now taking out about 200 tons of ore per month, from a depth of forty-five feet. This ore is assorted and something over half of the whole amount is shipped. Cornish workmen are chiefly employed. The stock of this mine is all held in this city.

THE CAMP AND McNULTY MINE is located about three quarters of a mile from the Napoleon. Very promising ore has been struck. Fifteen tons have been shipped as a test sample. Eight men are at work upon the mine.

THE STAR CLAIM, between the McNulty and Napoleon, is as yet undeveloped.

THE LIVE OAK MINE was originally located by Mr. Borchert. A shaft has been sunk upon it to the depth of about

eighty feet. It is chiefly owned in this city. The work upon the mine is being prosecuted with much energy by Mr. Botcher, as Superintendent. Its value is a mere question of time.

THE HUGHES MINE, at Quail Hill, is chiefly owned by Hiram Hughes, and is mined for gold as well as copper. Mr. H. is developing this valuable claim according to his own views. It displays a mass of rich carbonates of copper, and yielded largely in gold during last year. At present the workings are limited, but at a future period the value of this large deposit of mineral wealth will be fully appreciated.

## RECENT DISCOVERIES.

New discoveries of Copper are constantly being made in this (Calaveras) county. The *Calaveras Chronicle* of Dec. 6th says a copper mine has recently been discovered at Hog Hill, in Salt Spring Valley, which is rapidly being developed and promises to become one of the richest in the county. New leads are being found in the vicinity of Campo Seco, and the old ones are proving rich. The town is rapidly increasing in importance.

## COPPER IN SONORA COUNTY.

The *Sonora Flag*, of recent date, says that J. Oliphant & Co. who have been engaged in prospecting for copper in the neighborhood of Montezuma, for several months past, have at last "struck it," at a place about a mile to the north of the town. The lead consists of two separate veins running parallel and close to each other, about eighteen inches thick, each.

The *Democrat*, published in the same county, of late date says deep tunnels are being run into the Melones copper lode, and it is expected that the vein will soon be struck.

## COPPER IN PLACER COUNTY.

The *Auburn Herald* of the 13th inst. says:—"We were shown yesterday a specimen of copper ore recently discovered about seven miles from Auburn. Those who profess to know inform us that it is much richer than any that has yet been discovered in Copperopolis. It was an old Copperopolis miner who discovered the lead. He has already formed a company for the working of the mine."

## COPPER SHIPMENTS.

The Napoleon Copper Mining Co. shipped, last week, sixty tons of ore to New York, by the ship Logan. This is said to have been the first shipment to that city. Boston having previously monopolized all the shipments to the Atlantic states.

MINERALS IN MAINE.—Very important mineral discoveries have recently been made in Maine, Canada and New Brunswick:

There is considerable excitement in the region of Lubec on account of the discovery of valuable metals and ores, especially of lead and gold. Prof. Shepard, of Connecticut, is now prospecting for mines and minerals in eastern Maine, and the adjacent provinces. His opinion is that Washington county is exceedingly rich in minerals. He says they have just struck a lead mine more valuable than any other one known in the world, far exceeding the Missourian mines which he has examined. He backs up his opinion by investments and shows his faith by his works, for he has purchased five thousand acres of land in the town of Cutler, which embraces five miles of seacoast.

TAX ON COAL LANDS.—The Commissioners of Internal Revenue have decided—1st. The owner or lessee of coal lands must have a dealer's license in order to be authorized to sell the product. Producers of coal are not required to take a manufacturers license. 2d. Owners or lessees of coal lands who take out the coal solely for their own use, as manufacturers, must pay the tax, as the coal is used for consumption. 3d. Coal dealers whose sales are less than \$600, are liable to the duty; for not being manufacturers, the provisions of section seventy-three are applicable. 4th. Wagons who purchase coal by the load, from the dealers, to sell to customers, are to be rated as peddlers. 5th. Steamboats are not manufacturers. The same is true of coal barges.

POSTAGE ON BOOKS.—It is not generally known that an act was passed at the last session of Congress reducing the postage on books sent by mail, to the rate charged for newspapers—one cent an ounce in the State, and three cents when sent East. Heretofore the postage on books was the same as letter postage. Parties, therefore, can send books to their friends in the East, at a trifling expense.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

The Succor G. & S. M. Co. will hold its annual Meeting, January 6th, 1863, at its Office, Nos. 1 & 2, Montgomery Block.

Wide West Mining Co.—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

Reese River Mining Co.—Ten cents per share has been levied upon the capital Stock of this Company, payable Jan. 14th.

Hawley Mining Co.—Annual Meeting for election of Trustees will be held at Office 204, Front St., Jan. 5th.

San Francisco S. M. Co. have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

Gazelle G. & S. M. Co. will hold annual Meeting Jan. 7th.

Pacific Quicksilver Mining Co.—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

Keystone Copper Mining Co., advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

Mammoth Ledge Mining Co. give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

MINERS' MEETING.—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1862, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 25th.

CHARLES CANY MINING Co.—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

LIVE OAK COPPER MINING Co.—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

NORTH POROSI SILVER MINING Co.—Annual meeting of Stockholders will be held on the first Monday in January, 1863.

An assessment of four dollars per share was levied on this Company, Dec. 11th, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

MEREDITH GOLD & SILVER MINING Co.—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cents per share, on the 10th of Dec. payable within thirty days, office cor. Pine and Montgomery Sts.

BULLION G. & S. M. Co.—The Stockholders are notified that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

CEDAR HILL TUNNEL MINING Co.—Annual Meeting of Stockholders will be held at office, No. 5, over Parrot & Co's Bank, on the 1st Thursday in January.

SIERRA S. M. Co. will sell at auction, shares on which arrears may be due on Monday, January 5th, by Duncan & Co.

NORTON G. & S. M. Co.—An assessment of two dollars per share was levied Nov. 25, payable on or before Dec. 30th, 1862, at office 522 Montgomery St.

ADRIATIC G. & S. M. Co. will hold its annual Meeting of Stockholders on Monday January 5th 1863, at No. 4, Amory Hall.

WILLOW SPRINGS G. & S. M. Co.—The annual meeting of Stockholders will be held at 224 Montgomery, on the 29th of December, for election of officers.

BANNER G. & S. M. Co. has been duly organized. All claims or interests not presented for examination at office, 522 Montgomery St., on or before Dec. 31st, 1862, will be forever barred.

The first annual meeting of the Stockholders of this Company will be held at their office, Dec. 24th, for the election of Trustees, etc.

DIOS PADRE G. & S. M. Co.—An assessment of three dollars per share was levied, Nov. 29th, payable on or before Jan. 1st, 1863, at office 502 Montgomery St.

EMMETT G. & S. M. Co.—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

VIBBARD G. & S. M. Co.—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

DOYLE G. & S. M. Co.—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

LIVINGSTON G. & S. M. Co.—An assessment of 25 cents

er share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

ISAAC'S G. & S. M. Co.—An assessment of 25 cents per share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

KOHLER G. & S. M. Co.—An assessment of 25 cents per share was levied, Nov. 21st, and is now payable at office 326 Clay St.

EL DORADO G. & S. M. Co.—An assessment of one dollar per share was levied, Dec. 1st, and payable at office, on N. E. cor. of California and Montgomery Sts., at or Superintendent in Virginia City.

IOWA MINING Co.—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

JOSEPHINE MINING Co.—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

BURNSIDE S. M. Co.—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

CALEDONIA G. & S. M. Co.—An assessment of 20 cents per share has been levied by order of Trustees, and all Stockholders neglecting to pay on or before Dec. 22d, will have Stock sold to pay the same on that day, in front of the Post Office, Gold Hill. Office 412 Front St.

HAWLEY MINING Co.—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

AMERICAN QUICKSILVER MINING Co.—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days.—At the expiration of which time delinquent Stock will be sold.

NAPOLÉON COPPER MINING Co.—The first annual meeting of this Company will be held at office N. E. corner of Sacramento and Montgomery Sts., on Monday, January 12th 1863, at 8 P. M.

MADISON G. & S. M. Co.—The books of this Company are open for issuance and transfer of Stock, at 608 Merchant St.

An assessment of two dollars per share was levied on the Stock of this Company, Nov. 13th, payable at once.

BURNING MOSCOW S. M. Co.—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

The regular quarterly meeting of this Company will be held at the Company's office, on Wednesday, Dec. 24th 1862.

## WASHOE MINING NOTICES.

POORMAN G. & S. M. Co.—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Michel.

COLEDONIA TUNNEL AND MINING Co.—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

THE CHIMNEY ROCK Co., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

LA CROSSE MINING Co.—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

HAWK EYE SILVER MINING Co.—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

ASHLAND G. & S. M. Co.—An assessment of fifty cents per share was levied, Dec. 10, payable at the office of M. J. Power, Sec., B. St.

INDEPENDENT G. & S. M. Co.—The annual meeting of this Company, for electing officers, will be held at Galena, on the first Monday in January.

THE SIERRA NEVADA SILVER MINING Co. advertise in the Territorial Enterprise, 1042 shares of stock for sale for assessments, on Monday, Dec. 29th. Shareholders will do well to look to their interests.

UNION COMPANY, GOLD HILL.—An assessment of fifty cents per foot has been levied, payable at the rate of ten cents per foot, Nov. 15, 22, 29; Dec 6, and 13, at the Company's office, Gold Hill.

NORMAN SILVER MINING Co.—An assessment of One Dollar per share was levied, Nov. 19th, payable on or before Dec. 31st, to the Superintendent in Virginia City, or at the office, No. 40, Montgomery Street, San Francisco.

MARTIN WHITE MINING COMPANY.—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

THE SWEENEY Co., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

MOHEGAN Co., Cedar Hill.—An assessment of fifty cents

per foot was levied, Dec. 5th; payable forthwith, to the Secretary at Virginia City.

ORIENTAL G. & S. M. Co.—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

THE ZENOBIA LODE COMPANY, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

To Chemists, Architects, Millwrights and Farmers! This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$58.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

### EWER & SMITH, Publishers,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## MUSIC! MUSIC!! MUSIC!!!

A. KOHLER,

IMPORTER OF EVERY DESCRIPTION OF

Musical Instruments and Musical Merchandise.

Sheet Music and Music Books.

GENUINE ROMAN STRINGS, &c., &c., &c.

Light's New Patent Insulated Iron Frame is put into all of

Light & Bradbury's OVERSTRUNG PIANOS.

Wherever these instruments are known they RANK AS THE FIRST AND BEST In tone, delicacy of touch and durability.

All the leading Musicians of the country have testified to their superiority.

A. KOHLER, Agent for the Pacific Coast.

Melodeons and Harmoniums,

FROM THE CELEBRATED MANUFACTORY OF

MASON & HAMLIN.

Warranted superior to all others.

Send for a catalogue and Price list.

A. KOHLER, Agent.

UNDER THE PROVISIONS of what is known as the Shafter Bill, it is proposed to sell the city title to homestead lots for twenty-five to two hundred dollars each.

The undersigned will sell homestead lots within the limits of the city, and miles nearer to the business centre than many of the lands covered by the Shafter Bill, and place the party in immediate possession of the same, without present trouble or prospective lawsuits, for from \$10 to \$20 each. THE TITLE is absolutely PERFECT, being a Spanish Grant, finally confirmed and patented by the United States. The Shafter Bill respects this title: the city authorities respect it; the District Court and the Supreme Court of the State, as well as the District Court and Supreme Court of the United States respect it; besides the TITLE HAS BEEN FOREVER QUIETED BY A FINAL DECREE AND JUDGEMENT AGAINST THE CITY so that there is not even a cloud or shadow upon it. Whoever purchases one of these lots will buy a lot, not a lawsuit.

Office No. 19 Naglee's Building corner of Montgomery and Merchant sts. HARVEY S. BROWN.

# Mining and Scientific Press.

W. B. EWER, ..... EDITOR.

MONDAY ..... DECEMBER 29, 1862.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at Fifty CENTS per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEROTYPING and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## THE AGE OF MACHINERY.

We read of the "Heroic Age," of the "Golden Age," of the "Iron Age," of the "Dark Ages" and of the "Progressive Age." The latter term has been, not altogether without reason, applied to the present age; but were we to select an epithet by which to characterise this age of ours, we should term it the "AGE OF MACHINERY"—for such it is, in the fullest sense of the term. The entire individual study of the present day is the adaptation of means to ends. Nothing is done directly, or by hand, which, by any human contrivance can be accomplished by machinery. From the simplest operations in human industry, even to the most complex, some cunning, abbreviating process has been devised by the mechanical ingenuity of the present age. The Patent Office at Washington, within a few years, has become a perfect wilderness of labor saving contrivances, and displays to the astonished looker on, an aggregate of inventive genius, which is absolutely bewildering.

Go where we will throughout the land; notice whatever branch of industry we may, old modes of exertion are everywhere thrown aside, and the slow and feeble hand of the living antizan has given way before the speedier and tireless limbs of wood and iron which the cunning inventor has taught to work at his bidding. The shuttle has dropped from the hands of the drowsy weaver and fallen into the iron fingers that never tire, though they ply it many scores of times faster than it was wont to be moved. The farmer lays down the shovel and the hoe, the rake and the scythe, and steps aside for the multitudes of substitutes now plied by the power of steam or horses. The sailor furls his sail and drops his oar, while he bids his strong unwearied servant with iron limbs and vaporizing breath to bear him along the quiet river's bosom, or over the wildest ocean's swell. Even the horse is stripped of his harness and becomes laggard in his swiftest flight, as the swifter fire-horse, yoked in his stead, goes thundering along his iron way! The very lightnings of heaven—God's grandest and most subtle agents—have been subdued, and brought to the aid of man, and taught by him to convey his thoughts from point to point, with a speed which not only equals but absolutely outstrips time in his most rapid flight! We have machines which, almost without the aid of human hands bore their way into huge mountains in search of hidden treasure or to make straight the otherwise devious ways of commerce; again, they go down into the depths of the sea and dredge out its bottom, or attack the hitherto everlasting hills with a faith and force which causes them to remove at once to the sea and make thereof a smooth highway. We war with rude nature, and by our resistless energies come off always victorious.

Time was when commerce, with its white winged sails, ruled the world, and commercial position, alone gave power to nations. It was thus that Tyre, Carthage, Rome, Venice, and lastly England ruled the world by their commercial positions alone. Now all is changed. THE AGE OF MACHINERY IS TRIUMPHANT, and the genius of invention has sought this western hemisphere for its imperial seat. The

wooden walls which have hitherto been quite sufficient to protect the walks of commerce, and bid defiance to a world in arms, are now as weak and feeble in comparison to modern engines as the flapping sails which overshadow those walls in a calm, are to the almost resistless force of the gigantic machines which drive the huge steamers of the present day in their way across the deep, regardless alike of storm or calm. Wooden walls within the last year, have gone down forever before the iron clad ships, which the active genius of the American mechanic has brought to perfection as sudden and unexpectedly as the form of Hercules rose from the prolific brain of Jove. Thus it is that machinery now rules the world, whether in the arts of peace or war. The fate of nations will hereafter depend solely upon their attainments in practical science—in peace they must be able to contrive the most perfect machinery and apply it to the greatest variety of industrial pursuits—in war they must possess the means and knowledge to construct the most formidable engines of attack and resistance, and the heaviest calibre and longest range of guns.

## WHEELER'S AMALGAMATOR.

Upon the first page of to-day's issue will be found several finely executed engravings illustrative of the new Gold and Silver Amalgamator recently invented by Mr. Wheeler, of this city. Mr. W., besides being a first class mechanic, has probably had more experience in the construction and running of quartz mills than any other person in California. He has here brought his practical knowledge to bear, most successfully, in devising and constructing an apparatus for triturating gold and silver ores and amalgamating their metals. By an ingenious combination of certain well known principles, and the addition of several others that are new, and upon which he bases his patent, he has been able to introduce to the mining public a machine which needs only to be seen, by any practical miner, to be at once accepted as the *ne plus ultra* of amalgamators.

The machine is already in successful operation in Washoe, at the Zephyr Flat Mill, upon Carson River, where it has been running for some months, side by side, with the most approved of other amalgamators in use, also with the most uniform superiority in point of saving efficiency, and of care and attention required in running. One principle which is involved in this invention, and which is entirely new, is that the triturating and partial amalgamation is effected in one machine, while the complete amalgamation and cleaning up is confined to another, of entirely different construction. The first machine, only, is represented in the engraving which we give to-day, and may properly be called a "Triturator." The other machine, is called a "Separator," and will be illustrated as soon as the engraver can furnish us with the engravings. Two or three of the "Triturator," are designed to go with one "Separator."

It is almost impossible, even with the accompanying engravings, to convey a very clear idea of the essential principles of the "Triturator." In order to be fully appreciated it must be seen. The model itself is sufficient to carry conviction to every practical man, with regard to its utility and superiority. It is, however, in the combination of the two, and the new principles especially involved in the "Separator," where the most important advantages of the invention are most readily discovered. Of this we cannot speak more fully until we are enabled to place the engravings before our readers. Notwithstanding the complicated nature of the machine, nothing of the kind can be more simple in its construction or less liable to get out of order.

MONEY TO SPARE.—San Francisco has at this time a surplus of \$300,000 in her treasury, and the State half as much more. It has been suggested that the two amounts should be put together and invested in a monitor for the protection of this coast—trusting to Congress for its being refunded at some future time.

A HEAVY RAILROAD GRADE.—A railroad has been built in New Zealand fourteen miles in length, and rising in that distance 2,800 feet.

BULLION.—Almost nightly that huge wagon of Wells, Fargo & Co. backs up to the express office, and discharges heaps of pure silver bricks, the product of the Washoe mineral districts.—*Alta*.

## MINING NOTABILIA.

Our attention has been called to a bar of gold weighing 6 oz., 8 pwt., taken from 3000 lb. of arsenical pyrites, treated at Deetken's Metallurgical Works, near this city. We are assured that these pyrites, before being forwarded to Mr. Deetken were ground to an impalpable powder and submitted to the usual amalgamating processes, all the gold being extracted which could be made to amalgamate with quicksilver. Mr. Deetken claims that the process employed at his works for the treatment of sulphurets, is far superior to any wet process. He is undoubtedly correct, and all mill owners, who are working rock containing a large amount of sulphurets, will find it greatly to their advantage to save and forward them to Mr. D., who will work them for \$20 per ton. It is claimed that the yield by this process is from 30 to 50 per cent. higher than the usual processes of amalgamation. Mr. Deetken will set up at any mill, an apparatus for separating the sulphurets, for from \$50 to \$100—no power or clean water being required to operate the same. The works formerly owned by Mr. D., at Grass Valley, in Nevada Co., are well known in that region, where they have established a good reputation. It is his intention that his new establishment, in this city, shall, if possible, reach a still higher standard.

A VALUABLE DISCOVERY.—A rich and promising gold bearing lead of quartz was discovered last July, near Poverty Point, about two miles North of Placerville, by Messrs. John and Andrew Ellicott. The discoverers have organized a Company for working the vein under the title of the New York Quartz Mining Co. The New El Dorado Gold Mining Co. have taken up three sets of claims, known as No. 1, 2 and 3, adjoining the discovery claim on both the north and south. The Companies are actively engaged in opening their mines and erecting mills. The mills will soon be ready to run. Several shafts have been sunk upon different portions of the vein from 20 to 45 feet in depth, and El Dorado, No. 1 is running a tunnel. A large quantity of rock has already been raised, which is generally rich and well stocked with specimens. We examined a large quantity, last week, of very rich specimens which show much coarse gold. We trust the fortunate discoverers and their associates will find their "piles" in this new El Dorado.

BULLION.—The product of bullion from one hundred mills says the Virginia Union, is now considerably over a million of dollars per month, with the prospect of a rapid increase if things go on favorably. Several new mills are in process of building and will be finished inside of another month. Among these may be mentioned the Gould & Curry, and the large mill of the Daney Co. in addition equal to the production of half a million per month.

THE OPHIR COMPANY is running a tunnel through the length of their mine, 1400 feet, at a great depth from the surface. This work says the Virginia Union, when completed, will no doubt demonstrate the inexhaustible wealth of the Ophir mine, and increase confidence in the Comstock lode. Already different companies have tapped that lode from the centre of Cedar Hill to the summit overlooking Gold Hill—a distance of one mile and a half. Throughout this entire distance its unquestionable richness was established.

ANOTHER SILVER LEDGE.—The Quincy Union says, Mr. A. Robinson informs them that a ledge of silver rock has recently been discovered near Eagle Gulch, in Plumas county, that prospects very favorably.

THE Grass Valley National states that some persons have discovered a mine of the oxide of manganese, which is very useful in the process of silver saving. It is worth eight cents an ounce.

EARTHQUAKE.—Our citizens were pretty generally shaken out of their morning's nap, just before daylight on Tuesday last. Door bells were rung, plastering knocked down, etc., but no serious damage was done. The same shock was quite sensibly felt at San Jose.

HOLIDAY PRESENTS.—Messrs. Brauerman & Levy advertise an extensive Stock of rich Holiday Presents, at their sales room, No. 621, Washington Street, in this city. Particular attention is called to their well assorted Stock of Jewelry, Silver Ware and Precious Stones.

## NEW BUSINESS ARRANGEMENT.

Mr. C. W. M. Smith, having purchased one half interest in the "Mining and Scientific Press," will hereafter be associated with us in the publication of the same. The editorial management will continue as heretofore. Mr. Smith will take charge of the business of the office, and in that capacity, will call upon the mining and business portion of the city to obtain subscribers among such as are desirous of seeing a journal established in San Francisco, especially devoted to the great leading interest of the State, and to the general dissemination of practical knowledge among our people. After a short stay in the city Mr. S. will visit the principal mining localities in the State and neighboring Territory of Nevada, for the purpose of increasing the circulation and usefulness of the Press. During his travels he will keep the readers of the Press apprised of the general condition and progress of the mining interest in such localities as he may visit. We bespeak for him a kind and generous reception wherever he may go, either in the city or country.

Perhaps it may not be inappropriate, in this connection, to remind our citizens, whether directly engaged in mining or not, of the importance of establishing and sustaining at least one paper in the State of the character contemplated in the prospectus of the MINING AND SCIENTIFIC PRESS. At the suggestion of quite a number of gentlemen, anxious for the accomplishment of such a purpose, we have embarked in the enterprise, and can assure the friends of the same, that the value and interest of the paper will be in exact accordance with the liberality of their patronage. The imagination can scarcely comprehend the importance to which the legitimate mining interest of the Pacific coast may be carried in the course of another decade. The mines of the Eastern Slope are even now beginning to furnish an important portion of our monthly shipments of precious metals; while the mineral developments on this side, other than gold, are already beginning to attract attention of European, as well as Eastern capitalists. The growth, in wealth and population, of San Francisco, will be limited only by the developments of our mines. It is to be hoped then that her merchants, whether directly engaged in mining, or not, will yield a liberal support to a paper, whose sole mission is, by the diffusion of practical information, and interchange of opinions and experience among miners, themselves, to aid in the proper and early development of this great interest. It is furthermore important that a knowledge of the same should be placed before citizens, capitalists and working men abroad, to the end that our city and mines may be filled at an early day, with those hardy sons of toil who will be quite ready to avail themselves of the opportunities and privileges of our state, to escape from the turmoils and miseries of Eastern and European communities. This they will do whenever these advantages are properly brought to their knowledge. Again we bespeak for our associate, a cordial and appreciative welcome, while he goes among our citizens and merchants, with the above objects in view.

**SUBSCRIBE.**—Are you a miner and not a subscriber to the MINING AND SCIENTIFIC PRESS? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the PRESS, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the MINING AND SCIENTIFIC PRESS. We invite all to send us their names and *four dollars*, or *two dollars* for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so for meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the PRESS for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short time.

## THE NEW CITY.

The unusually high water of last winter afforded a most excellent opportunity for the selection of building sites along our various valley streams. Among the numerous embryo cities and towns thus laid out, we know of no other which present more local advantages than the new city of Collinsville, on the Sacramento.

A glance at the Map of California is all that is necessary to satisfy any reflecting mind of the judicious selection of this site. It is never subject to overflow, as the wharf and warehouses were built at the highest flood last winter. The vast region of fine country around it is fast filling up, and if the uninterrupted navigation from San Francisco to Sacramento increases as it has done for the last five years, there is no reason why Collinsville should not become an important City, it being a midway stopping place for the steamers between San Francisco and Sacramento. Already, at and around Collinsville, there is a large number of inhabitants. They have a Post Office, Store, large Warehouse, and a fine Wharf, 200 feet long by 200 feet wide, which cost upward of \$10,000.

The farming country in Solano County cannot be surpassed. Fine soil, pure water, a milder climate, both in summer and winter, than almost any other part of California. A city with such a situation, surrounded by so desirable a country, cannot but have an early importance. A ferry has been established between this place, Antioch and N. York, making the distance only 35 miles, by land, to San Francisco.

The Company have donated one of the finest pieces of land in their city for a college and school house, to be finished by the first of May next.

Full information with regard to the place may be obtained by enquiring at the Office of the Collinsville Land Company, 318 California Street, either personally or by letter.

JOHN NUGENT AND ARCHIBALD C. PEACHY have gone East to attend to the celebrated New Almaden quicksilver mine case, now pending before the United States Supreme Court on an appeal.

## Mining Stock Report.

## REPORT OF SALES

At the San Francisco Mining Stock Board,  
For the week ending December 27, 1862.

Names of Companies.	Total No. Shrs.	Shares per ft.	Par Value.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

The mining market for the past week has not been very active, owing chiefly to the occurrence of the Holidays. The sales at the Mining Board will be noticed above.

## REMARKS.

**OPHIR.**—This stock which, the week before, very materially declined and opened on Monday last at \$2,150, advanced early in the week to \$2,350 cash or \$2,400 on 60 days. Bates and Williams quotes sales, the past week, of 312 shares. The highest figures were obtained under the impression that a new and rich strike had been made in the mine, just north of the Mexican ground. The report not being confirmed, the stock was quiet during the latter part of the week.

The total amount of dividends made by this Company during the last seven months has reached \$470,000, or \$335 71 per foot. Under the close and economical management in prospect for the coming year, and the large amount of valuable ground now open for work, in addition to the increased capacity of the mill, it is but fair to infer that the dividends of this mine will be largely increased the coming year.

The GOULD & CURRY declared a dividend on the 23d instant, of \$24 to the

foot, payable on the 30th. This stock has been lightly dealt in, the past week, but little being in the market. Bates and Williams quotes sales of only 44 shares, from \$2,700 cash to \$2,900 on 60 days. Sanborn & Co. quote 20 shares at \$2,800 on 30 days, and 10 at \$5,700 cash. The following are the receipts and expenditures of this Company, from Dec. 16, 1861 to Dec. 1, 1862, as per Annual Report of the Secretary from which we collate:

## RECEIPTS.

Cash on hand, Dec. 16, 1861,	\$ 7,315 72
Balance of assessment No. 4	11,632 00
Total Receipts from all sources, from Dec. 16, 1861 to Dec. 1, 1862	891,895 98
	\$900,743 68

## EXPENDITURES.

For constructing Mill, purchase of woodland, improvements, cattle, working ores, etc., etc.	\$889,140 96
Cash on hand Dec. 16, 1862,	11,602 72
	\$900,743

A large quantity of ore from this mine, generally of inferior quality, has been worked the past year at several custom mills, with the following result, Amount received for ore worked and sold \$828,946 45 Working expenses on same 333,137 56

Net profits \$449,807 89

The balance of liabilities of the Company, over available assets, Dec. 1st, 1862, were \$40,110 51. From that date to Dec. 2d was sufficient to pay off that debt and declare a dividend of \$24 per foot—Henceforth we may set down the Gould and Curry as a regular dividend paying mine.

Chollar is quoted at the Board the past week at the uniform rate of \$355—in Bates and Williams' Circular, the following quotations are given:—20 shares at \$360—12 at \$365—20 at \$370. The decision of the Supreme Court in the Chollar vs. Potosi is expected this week.

Potosi has steadily advanced the past week under the expectation of a compromise. It has gone steadily up from \$70 to \$100, at which last quotation Sanborn & Co. quote a sale of 30 shares.

Sierra Nevada has advanced \$20 on last weeks quotations, and rests at \$78. This advance has been caused by a report that very rich ore had been struck in the mine. Should this report be confirmed further advances may be looked for this week.

## Coso Stocks.

The Josephine had bidders, the past week, at the Stock Board at from \$15 to \$15½.—Holders asking \$20 to \$25. Coso—\$20 asked. Willow Springs—held at \$45.

## Mexican Mines.

St. Nicholas Silver Mining Co. is quoted by Sanborn's Circular at \$100. Mina Prieta finds no recent buyers, but is held at \$110. Dios Padre is quoted at from 30 to 33 dollars.

## WASHOE STOCK REPORT.

[Compiled from the Daily Territorial Enterprise.]

The Territorial Enterprise says that the passage of the Incorporation Bill, created, at first, something of a flutter in the Stock Market, at Virginia City; but as a large class of permanent citizens, there, are satisfied that the Bill will eventually work to the advantage of the mineral development of the Territory, operators generally look with complacency upon any immediate disadvantage, fully satisfied that money invested in mines there will be as amply protected under the Territorial laws, as under the laws of California. The Enterprise intimates that the mines will be more rapidly developed, more satisfactorily developed, more intelligently managed under the eye of a resident board of Trustees, than they ever could be under the past system of absentee managers.

We trust the speculations of the Enterprise may be correct, but we apprehend that time will show that the Nevadans have made an impolitic move. San Franciscans will not go to Washoe to live for the sake of investing their money in the silver mines, but they ever so rich.

Accounts from the coal mines near Palmyra are of a more favorable and reliable character than at any time during the progress of their development. The developments which are now being made are such as tend to show in a more practical manner the real merits of the mines. The Pioneer Company have taken upward of fifty tons of coal from their claims—An amount sufficient to thoroughly test the quality of the article—which has been used at several mills at Silver City, and is found to serve well for fuel, and is afforded at less expense than wood can be. This company is said to have prospected a sufficient amount of their ground to prove beyond a doubt the permanency of the mine. The ledge is some three feet in width, dipping at an angle of forty-five degrees, affording a better quality of coal the deeper they descend.

There appears to be less activity in stocks than usual, without a basis on which to calculate transactions. There will not, probably, be a general demand for stocks before Spring. Sales made during the Winter will be at rates equally low as at present.

Nevada, on the 16th was offered at \$7 50. A small transaction is reported at these figures.

Inquiry was made for North American, but at figures below selling prices. Mount Davidson is offered at \$6—the highest bid, \$4 50.

Cedar Hill Tunnel stock is offered at \$6. It is saleable at \$5.

Wyoming is quiet. Prospect for a ledge in these claims are less flattering than on first discovery. The company continue to drive a cut in the direction of the supposed ledge, and will soon reach the point wherethe rock was found on the surface.

The Savage (south continuation of the Gould & Curry), a claim scarcely known in the San Francisco market, has suddenly leaped into notice and high favor, and fifty feet were sold on the 17th ult. at \$60 per foot—

The following stocks, not enumerated above, are in the market in Virginia City, and held at the figures annexed:—

Santa Fe	\$25 00	Summit	\$5 00
Empire	6 00	Washington Leds	6 00
McBee	25 00	Milton	20 00
Belvidere	15 00	Laboring	15 00
Peyton	25 00	Sweeney	25 00
Burgan	4 50	Caledonia	8 00
El Dorado	70 00	St. George	4 00

## GIFTS, DONATIONS AND SUBSCRIPTIONS

To the work entitled "THE METALLIC AND AGRICULTURAL WEALTH OF THE PACIFIC STATES." The publisher desires to thank the several gentlemen whose names are hereto appended, for their munificence and aid in behalf of this important work.

Samuel Brannan, Esq., Citizen.  
John Parrot, Esq., Banker.  
Hyam Joseph, Esq., Citizen.  
Ira P. Rankin, Esq., Collector of Customs.  
S. H. Parker, Esq., California Postal Agent.

We would call the attention of our readers to the Stock Report which we give from week to week in the columns of the Press. This report is very full and carefully made up from the most authentic sources, embracing all attainable transactions both in this city and in Washoe. Our report, for this city, embraces a full statement of the sales at the Stock Board—each day's operations being presented in a tabular form. We also re-produce the substance of the several Mining Circulars issued in this city. In order to give each week's transactions, full and complete, we have changed our publication day from Saturday to Monday. We intend to make each number of the Press a full epitome of the mining intelligence of the previous week, and add thereto such matters of general interest and information as shall be thought useful and advantageous to the miner, the mechanic and, in short, to every seeker after useful and practical knowledge.

THE GREAT WORK BY JULIUS SILVERSMITH.—The publisher desires to thank the following journals and periodicals that have made kind mention and said a word of encouragement for his mission and his gigantic undertaking. The journals alluded to are the *Daily Alta California*, *Herald and Mirror*, *Morning Call*, *San Francisco Abend Post*, *MINING AND SCIENTIFIC PRESS*, *Weekly Gleaner*, *San Mateo Gazette*, *Solano County Herald*, *Dutch Flat Enquirer*, *Washoe Times*, and *Sacramento Dispatch*.

SOMETHING NEW.—A room has been set apart in the Occidental Hotel, of this city, as a branch telegraph office. The wires from which connect with the State telegraph office, several blocks distant. This arrangement has been devised for the convenience of the visitors and occupants of the house, who may thus transfer their messages to any part of the Union without leaving the Hotel.

## Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

## PROSPECTUS TO THE PEOPLE OF THE STATE OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hither from England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our country from the emigration of the merchant, the mechanic, the miner, the mining companies and professional community, cannot but be beneficial, provided the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Pre-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have we the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils; also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay these several important features before our people through the Mining and Scientific Press, and the work he hereby offers. But the most important subject in his mission is the inducement he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the counting house, to the professor and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

RECENT PATENTS.—Granted to CALIFORNIA INVENTORS through the Pacific Patent Agency, J. SILVERSMITH, Solicitor:

HERMAN CAMP.—Patent for Quartz Crusher and Amalgamator.

W. H. RICHARDSON.—Patent granted for Washing Machine.

E. E. MATTESON, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

ELANDER HEATH, San Francisco, *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

G. F. DEETKEN, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

## Routes and Fares from San Francisco to Foreign and Domestic cities.

*Pacific Mail Steamship Company*—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

*Nicaragua Steamship line*, Ross, Dempster & Co., agents. —Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

*California Steam Navigation Company* dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Peta'uma, \$3. *Overland Mail Company*—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years. Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone."

"I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who converse there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts," or removal of the Lens by absorption or extraction;—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA connecting via the Panama Railroad with the steamers of the Atlantic and Pacific Steamship Company, at Aspinwall.

**FOR PANAMA,**

The following Steamships will be dispatched in the month of December 1862:  
20th—SONORA, W. F. Laidig, Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York

For freight or passage, apply to

Dec. 1st—St. LOUIS, Captain E. S. Farnsworth,

" 11—GOLDEN AGE, W. H. Hudson, Commander.

**REMOVAL.**

**OFFICE OF THE PACIFIC METALLURGICAL WORKS** is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

**COPPER OBES**—Highest market rates advanced in cash, for shipments.

S. C. BRADSHAW, Agent,

my30 318 California street, near Sansome, up stairs.

**LABOR-SAVING**

**Rock Drilling Machines.**

**TWO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRYMEN.** The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

**HAND, HORSE, AND**

**STEAM-POWER MACHINES.**

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A **FOUR-HORSE POWER MACHINE**, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to **WM. W. DUNN,**

**Dr. Van Zandt,**  
**Consulting Physician and Surgeon,**

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity. Made Subservient for the Cure of all Nervous and Spinal Diseases.

**THAT THIS PRINCIPLE**, successfully applied to diseased states of the system, has proved the great sought-for necessity, long wanted by physicians, to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

**Too Much Cannot Be Said**

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

**Awaken the Magnetic Life Within Us,**

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electric intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

**No Compromise with Disease.**

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

**To the Ladies of California.**

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complainings which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wonted tonicity of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

**Baffled the Skill of Physicians.**

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

**All the World Over**

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients who, so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or cachectic habit of body,

**None Need Despair of Relief.**

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of disease and man to remove.

**The Eye and Ear Diseases.**

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made those afflictions an especial study, and that he is the only Surgeon on our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

**FREDERICK KESMODEL,**  
**Cutler and Surgical Instrument Maker**

817 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

**RECEIVED** a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

**FREDERICK KESMODEL,**

## 50 lbs. MARINE AND Fire-Proof Paint,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stoue, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

### DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

### 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and coating less than any paint.

### DIRECTIONS:

HOUSE.—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. FOUQUES, Superintendent.

WORKS, North Beach; Office, 318 California st., San Francisco.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,

No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office, no 13 6mo

## V. SQUARZA'S Punch Factory.

MR. SQUARZA IS FAVORABLY known in this State for his Anti-Divorce Liquore and similar productions, as manufactured by him. We may mention that Mr. Squarza is an aid in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,
Cognac do.	Whisky do.
Anti-Divorce Punch,	Kirschwasser do.
Coffee do.	Cocoa do.
Pineapple do.	Morning Comfort,
Adonis do.	Kumel,
Kirschwasser,	Brandy Cocktail,
Appetiser,	Anti-Dyspepsia Bitters,
	Ladies' Tears,

And CHAMPAGNES of all brands.

## NECESSITY FOR COOPERATION AMONG SILVER MINERS.

We would call the especial attention of miners, especially those engaged in silver mining, to the following article which we clip from the *Virginia City Union*. The business of silver mining is one, above all others, which demands a high degree of scientific attainment, the closest attention to its detail, and calls for the fullest and most free interchange of experience among those engaged therein. The absence of mining schools, where men can be properly educated for mining superintendents and engineers, is already beginning to be sensibly felt among our people. It must be conceded that we have but very few among us, who are properly qualified to carry on, successfully and economically, this difficult and intricate branch of mining. In no way can the absence of such needful skill be so fully provided against, as by carrying out the suggestions contained in the following article from the *Union*. Will not the mill men and miners of Virginia City take the initiatory step, and effect an organization, for the above purpose, which shall be the forerunner of many such, on all parts of the Pacific Slope.

Our people are engaged in a pursuit, the working of silver ores of various character, that requires scientific knowledge of the highest order inasmuch as they are dealing with problems in chemistry which only the most experienced metallurgists and chemists can, at times, hope to solve successfully. We have tried dry and wet crushing; hot water in the pans and steam in the tubs and pans; steam in false bottoms; all sorts of mullers, smooth bottom pans and pans with arastra bottoms to deposit the amalgam in; much quicksilver and little; we use salt and sulphuric acid, sulphate of copper, muriatic acid, copperas, potash, soda, sulphate of soda, catechu, lime, pyroligneous acid, &c. Now, who among all our mill men can tell the definite and specific object to be achieved by the use of any or all of these various processes and chemicals? We have tried the Veatch, Sagebrush, Hatch, Patio, Smith & Dewey, Jones, McCullough, Frieberg, and many other processes, and who among us can tell which one is the best of them all and what are the comparative results therefrom obtained? Who can tell the chemical analysis of the ores of Gold Hill, Ophir, Gould & Curry, Potosi, Silver City, Flowery, Humboldt, Veatch Mines, Esmeralda or Silver Mountain, all differing in chemical character, yet all silver ores and worked by the various processes in vogue in this Territory, the results of which whether successful or otherwise, are kept strictly private. Now this is a short-sighted and stupid policy and should be once abandoned.

This business is one calling for all the lights of experience and the resources of science—far more so than the working of the gold ores of California, that being merely a mechanical operation. It may be conceded that we have but few truly scientific men among us, and who could solve the questions proposed; nevertheless, it is only by admitting our ignorance in any case, and asking questions—seeking knowledge, that we can hope to solve any difficult problem. It seems to us that in the present state of mining and scientific knowledge, much good might accrue if the mining and mill men would form themselves into a society for their mutual improvement; just as the farmers in the Atlantic States form clubs, and meet say once a week or month, with certain definite subjects to be discussed, each one willing to contribute to the common stock of knowledge that he has gathered from his experience. So in the opening of mines or the working of ores from the various mines, whether the results are successful or not, we should know it; for it is not alone successful results that point the way to safety,—we need to

know where the shoals and rocks are as well as the deep water. Meetings of this sort might be made interesting and a means of great utility, if rightly carried on. With the present long evenings men have much leisure, a portion of which might well be devoted to inquiries of this kind.

As at present conducted comparatively little useful knowledge is derived from our mining operations, each one working apart, and keeping the results of his work to himself. One man knows little or nothing of the experiments made by his neighbor, and may be treating his ores to great disadvantage; whereas by the knowledge of some simple fact or agent in the possession of the other, he might attain to success.

If by the use of any chemicals he can remove the sulphur from his ores, leaving his silver a sulphate it does not follow that it will amalgamate with quicksilver, for his sulphate would be found by the application of salt to be held in solution in the hot water in his vats. If the gold of the Gould & Curry is associated with tellurium and will not amalgamate, and he finds that some one mill man uniformly gets more gold from the same class of ore, but by a different process than he does, he has a clue that, followed up, may make "two blades of grass where but one grew before." If the Patio process is a success in itself, adapted especially to the Comstock ores, working them cheaply and with certainty of profitable results at all times of the year in this climate, we may find that out, or whether there are any insuperable difficulties in the way. If the Ophir, Central, California, Gould & Curry and others on the Comstock are, as I believe, shipping to Europe their first class ores, because the results obtained by them are not sufficiently near to assay returns to justify them in working them here in the present state of metallurgical science, but rather fully justify the expense of shipment to San Francisco, the crushing there, perhaps, assay and aale there, then we need to know it, for the difficulties do not alone concern the owners of the ores. They are matters of public interest—for the employment of labor here and incidental growth of the place are synonymous, and go hand in hand in every community; and as Americans it becomes us, if we have not the science to-day to achieve the results of the smelting works of Europe, to have it by importing the science rather than exporting the ores.

**BRIDGING THE ENGLISH CHANNEL.**—Mitchell's *Steam Shipping Journal* says a project for a railway ferry-boat from Dover to Calais will be shortly before the public. The ferry-boat is to be 3,000 feet in length, 100 feet beam, and draw but 5 feet of water. In the centre of the deck will be a covered iron tunnel, into which the carriages will steam, with goods and passengers, to be conveyed across the Channel with considerable rapidity. The speed is to be 40 miles per hour. She will have rudders at both ends, and will never require to turn. Her build is to be that of a series of un-sinkable tubes.

**ANOTHER NEW JOURNAL.**—The California Wine and Wool Register is the name of a new 16-page monthly journal, to be published at Sacramento on and after January 1, 1863, by J. Q. A. Warren, the well known California journalist.

**COPPER MINING COMPANY IN NEVADA COUNTY.**—A company has been organized in Nevada called the "Consolidated Gold, Silver and Copper Mining Company." It has located 30 claims on the lead, or 3,000 feet.

**THE HESPERIAN** for January, has been laid upon our table. It is quite as interesting as usual, and especially valuable to all interested in the fashions and polite literature. Accompanying the Magazine is the usual paper pattern which has come to be such a welcome monthly present to the ladies.

**SUBSCRIBE.**—Are you a miner and not a subscriber to the *MINING AND SCIENTIFIC PRESS*? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the *PRESS*, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the *MINING AND SCIENTIFIC PRESS*. We invite all to send us their names and *four dollars*, or *two dollars* for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so far meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the *PRESS* for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short time.

The news of the capture of the *Ariel*, which was telegraphed across the continent immediately after the arrival of the Constitution at this port, on Saturday last, created a decided sensation in New York and Washington. Senator Latham promptly introduced a resolution into the Senate to send a war vessel to protect the California Steamers. The Connecticut sailed from Fortress Monroe, on that errand on Thursday last. Government will either bring the treasure at stated times in a war vessel or accompany the steamers with an escort. New York and the East is more directly interested in this movement than California. For if our merchants cannot safely send their gold to New York, it must of necessity remain here, which it cannot do without important benefits accruing therefrom to the industrial interests of this State.

**EASTERN TIMBER FOR CALIFORNIA.**—Oak timber is now being cut, in large quantities on the Mountains near Manchester, Vermont, for the California market.

**ELECTRICITY AND CHLOROFORM.**—An eminent French physician, at Paris, has discovered and announced to the world that an electric shock is sure salvation to any-body dying from the effects of chloroform.

It has been found on careful investigation that buildings often take fire from the hot air of furnaces, in consequence of the wood work being too near the register. Both hot air and steam pipes, if they come in contact with wood, will in time set fire to it, and persons cannot be too careful in putting furnaces into their houses.

## MINING NOTABILLIA.

**THE HUMBOLDT MINES.**—A full account of the progress of work upon the famous Sheba mine of this district will be found in another column.

A correspondent of the *Sacramento Union* writing from Unionville in this district says that work is being vigorously pushed by the Mars, the Original, the Alamo, the National and the Oroville companies. The Original has taken out a large quantity of ore, and delivered a portion at Price & Falls mill which has probably commenced crushing by this time. The National, also, has a quantity of rock at the mill. Much anxiety is felt to learn the result of these crushings.

The same correspondent has seen specimens of coal, recently discovered on the Emigrant road, at Rocky Ridge, on the Humboldt, about fifty miles above Unionville. The coal burns freely and is undoubtedly a valuable discovery. A company has been formed for working it, consisting chiefly of Sacramentans. In one of their shafts they have struck a stream of strong sulphur water, which is covered with a heavy film of oil.

**THE ALISAL MINES.**—The Alisal silver mine, recently discovered in Monterey county by Joaquín Torres, is located five miles east of the old mines, which were worked successfully in 1806 and 1812. The vein was lost many years ago, and has but recently been recovered.

**THE NAPA QUICKSILVER MINES.** It is said bid fair to turn out very valuable. The severe storms of last winter damaged the roads to such an extent as to render it impossible to put them in condition for hauling machinery to these mines until late last spring. Nothing was indeed done in the way of obtaining a practical test till within the last six or eight weeks—during which time six retorts were put up and in twelve days retorted 162 flasks of an excellent quality of quicksilver. An additional number of retorts are about to be put up, and other preparations are being made to work the mine on an extensive scale. The company are sanguine of having a "good thing."

**THE REESE RIVER QUARTZ MINES,** according to a Simpson Park correspondent are very promising. New leads are being discovered and old ones being rapidly developed. A recent correspondent of the *Virginia City Union* has examined some very rich ore from veins discovered but a day or two previous to his writing, which he pronounces rich.

**MINERAL SALT.**—The editor of the *Virginia City Union* has recently examined some specimens of salt from a newly discovered deposit on the Washoe and Humboldt road, a large portion of which is nearly or quite pure. The deposit is represented as from 50 to 100 feet in width, and can be traced over a mile. Mr. Dickey, of the Ophir mine, gives it as his opinion that the salt is much superior to that brought from the Walker river region, and quite equal to the best from San Francisco. The location is very accessible. A company is now being formed to open and work these mines, which will undoubtedly prove very valuable. A large quantity of salt is annually consumed in the silver mines of Washoe, for the reduction of ore, and it is expected that this discovery will soon materially reduce its price. The location of this deposit is 100 miles from Virginia City, 100 miles from Reese River and 30 to 40 miles from the Humboldt mines.

**THE EL DORADO COMPANY.**—The *Territorial Enterprise*, of Dec. 24th says this company have struck very fine ore in their mine, some specimens of which it is difficult to distinguish from Ophir or Gould and Curry rock. This strike not only enhances the value of the claim in which it is made, but is encouraging to those owning veins in the same range, and will also operate to increase the price of feet throughout the entire neighborhood. There are one or two other companies in the immediate vicinity, that certainly stand a very good chance of finding the same rich strike in their mines.

**CALIFORNIA BORAX COMPANY.**—The articles of incorporation of this Association have been filed. The object of the incorporation is the mining and manufacture of borax, sulphur, and other minerals, in California. Capital stock \$300,000, in 300 shares, of \$100 each. Trustees: William O. Ayers, Lafayette Maynard, Solomon Heydenfeldt, and Frederick Billings.

**MINING ON THE COLORADO.**—Rich mines are being discovered on the Colorado, from Chimney Peak to El Dorado Canon; thence in a northwesterly direction to the "Slate Range." It is said by those who are posted that Washoe will before long find a rival in this section of the State. Within the last few weeks new veins of silver have been discovered in the "Slate Range," which yield most astonishing results. From El Dorado Canon rich veins, which were discovered over a year ago, have been thoroughly tested since J. R. Vineyard erected his mill there, and the yield is very great. The veins are numerous, and so far as tested, appear to be equally rich in both silver and gold. The mines on the Lower Colorado have not been so thoroughly tested, in absence of mills, as those higher up, but the assays are equally as good as any of the others.

Should these mines prove to be in the end as good as they now prospect, it will be the means of bringing a population to this region, with a sprinkling of energy and capital, to keep matters moving. It requires some such contingency to regenerate this country and bring into it a people, the majority of whom are business men in the real sense of the word. Under such a state of things this section of the State will be really what it has been represented, and not the imaginary paradise it at present is.

**THE SAVAGE COMPANY.**—The types in our Stock Report of last week made us say that 50 feet of this Company, which adjoins the Gould and Curry, were sold for \$60 per foot—it should have read \$600, a very material difference. A large amount of work is now being done by this Company in the way of erecting buildings, hoisting machinery, and making preparations for an extensive and vigorous working of the mine. The hoisting apparatus is the most complete and substantial in the Territory. The shaft is 12 feet by 4 in size, walled up with three inch plank doubled-grooved at the ends. There will be three compartments, each four feet square—two for ore, and one for pumping water. It is now down 170 feet, and will perhaps reach a depth of 250 when the lead will be tapped and worked from below. The workmen have passed through the Comstock lead in going down, and are now twenty to thirty feet east of it.

**THE HUMBOLDT SILVER MINES.**—Roughly estimated, it may not be far out of the way to estimate the number of leads struck in the Humboldt at 2500—including the extensions already developed. But subtract from this amount any number which incredulity may suggest, and we shall have a sufficient number of paying veins which when fully developed will elevate this new mining region to an importance but little, if any, short of Washoe. When we look at the collective whole of the mining resources of the Western Slope, the imagination can scarcely conceive of its prospective value to our national progress. Developed and worked as this region soon will be, by the energy and enterprise of the Anglo-Saxon, it will far exceed in importance the rich fields of Mexico and Peru which, in their day, completely revolutionized the commerce of the world. Even when we look at it in the cold, calm light of business and philosophy, and allow the widest margin for difficulties and uncertainties, we can scarcely calculate the values that lie undeveloped in the barren wastes of the Western Slope.

**SILVER MOUNTAIN.**—A correspondent of the *Virginia Union* from this region speaks very encouragingly of its prospects, and narrates the following singular circumstance:

Messrs. Marks and Bradbury, while prospecting on the Esmeralda ledge in this District, came upon an old drill-hole, with fuse still in it, covered with debris to the depth of several feet; while three-fourths of a mile further up the river, in the Monitor District, there is a shaft some ten feet deep, showing that these early prospectors, whoever they might have been, were aware of the existence of gold-bearing quartz at this place, but finding that it would not pay, and being ignorant of the existence of silver in the rock, abandoned it.

Mr. Marks lately sold 100 feet in the Esmeralda ledge for \$1,750, to a San Francisco company, who are to erect a mill here in the spring for crushing the rock. Bradbury has sold out entirely, but for how much I cannot ascertain, though it is reasonable to infer it was a large sum, as he was known to have plenty of money before leaving for the East. Placer diggings were worked near here from '55 to '58, by various parties.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

PACIFIC PATENT AGENCY....J. SILVEESMITH,  
SOLICITOR.

## MUSIC! MUSIC!! MUSIC!!!

A. KOHLER,

IMPORTER OF EVERY DESCRIPTION OF

Musical Instruments and Musical Merchandise.

Sheet Music and Music Books.

GENUINE ROMAN STRINGS, &c., &c., &c.

Light's New Patent Insulated Iron Frame is put into all of

Light & Bradbury's OVERSTRUNG PIANOS.

Wherever these instruments are known they

RANK AS THE FIRST AND BEST

In tone, delicacy of touch and durability.

All the leading Musicians of the country have testified to their superiority.

A. KOHLER, Agent for the Pacific Coast.

Melodeons and Harmoniums,  
FROM THE CELEBRATED MANUFACTORY OF

MASON & HAMLIN.

Warranted superior to all others.

Send for a catalogue and Price list.

A. KOHLER, Agent.

## LATEST IMPROVEMENT

In LADIES' BUCKLES.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at our address,

FREDERIK REICHEL,

Manufacturing Jeweler,

620 Merchant street, San Francisco.

## INTERNATIONAL HOTEL

Jackson street, a few doors above Montgomery, San Francisco.

The oldest Established First Class House in  
SAN FRANCISCO

FIRE-PROOF BRICK BUILDING.

FOSTER & COLEMAN, Proprietors.

Most convenient to the Steamers' Landings, business streets,  
and places of Amusement.

Open all night.

NO DARK ROOMS! EVERY ROOM OPENS TO THE LIGHT AND AIR.

Every room is furnished with a first quality Patent Spring Bed and Hair Mattress, and are superior to any other Hotel in the State.

The International offers to guests the greatest number and best furnished Family Rooms, and also sets the BEST TABLE OF ANY HOUSE IN THE CITY.

THE..

## NEW ENGLAND SEWING MACHINE for \$25!

THIS MACHINE stands confessedly at the head of everything now before the public. In cheapness, neatness, compactness, durability and beauty, it has no rival. It is made with special reference to the wants of a family, and any one with the aid of the printed directions can learn to work it successfully in a few hours. It will work from leather to the finest cambric without the change of needle, tension, or feed. It gives the best satisfaction where it is sold, and all who use or examine pronounce it better adapted to meet the wants of every family than any other machine now offered to the public. Gauge and hemmer attached.

Every machine warranted, and kept in order free of charge. This is the only cheap machine that will do all kinds of family sewing.

STEWART & SHEAR, General Agents,

No. 60 Second street.

sep11

WILLIAM FELL, Notary Public for Storey County, N. T. Commissioner of Deeds for California Virginia City, N. T.

## SAN FRANCISCO MINING NOTICES.

**Mina Prieta S. M. Co.**—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

**Savage Mining Co.**—The Annual Meeting of the Stockholders of this Co. will be held at Office, 712, Montgomery St. Jan. 13.

**Union G. & S. M. Co.**—The regular quarterly Meeting will be held, at Office, 410, Montgomery St., Jan. 19.

**The Madison G. & S. M. Co.** advertise names of parties who are in arrears for assessments, and give notice that their stock will be sold on the 29th day of Jan. unless said assessments are previously paid.

**Franco-Americano S. M. Co.**—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Gaian, *President* and A. S. Gould, *Secretary*.

**Sierra Nevada S. M. Co.**—The annual meeting for the election of Trustees will be held at office No. 40, Montgomery Street, Jan. 12th.

**St. Louis G. & S. M. Co.**—The Annual Meeting for the election of Trustees will be held at office No. 40, Montgomery St., Jan. 10th.

**Lucerne Mining Co.**—The Annual Meeting for the election of Trustees will be held at Office 114, Battery St., Jan. 12th.

**Central Silver Mining Co.**—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

**Lady Bryan G. & S. M. Co.**—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

**Desert Mining Co.**—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

**Wide West Mining Co.**—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

**Reese River Mining Co.**—Ten cents per share has been levied upon the capital Stock of this Company, payable Jan. 14th.

**San Francisco S. M. Co.** have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

**Pacific Quicksilver Mining Co.**—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

**Keystone Copper Mining Co.** advertise for preposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

**Mammoth Ledge Mining Co.** give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

**MINERS' MEETING.**—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1862, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

**Hale & Norcross S. M. Co.** have levied an assessment of \$5 per share payable on or before Jan. 26th.

**CHARLES CANY MINING CO.**—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING CO.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOMI SILVER MINING CO.**—An assessment of four dollars per share was levied on this Company, Dec. 11, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**MEREDITH GOLD & SILVER MINING CO.**—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**RED, WHITE AND BLUE G. & S. M. Co.** levied an assessment of 25 cents per share, on the 10th of Dec., payable within thirty days, office cor. Pine and Montgomery Sts.

**BULLION G. & S. M. Co.**—The Stockholders are notified that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**SIERRA S. M. Co.** will sell at auction, shares on which arrears may be due on Monday, January 5th, by Duncan & Co.

**NORTON G. & S. M. Co.**—An assessment of two dollars per share was levied Nov. 25, payable on or before Dec. 30th, 1862, at office 522 Montgomery St.

**BANNER G. & S. M. Company** has been duly organized. The first annual meeting of the Stockholders of this Company will be held at their office, Dec. 24th, for the election of Trustees, etc.

The annual meeting has been adjourned to the 9th of January.

**Dios Padre G. & S. M. Co.**—An assessment of three dollars per share was levied, Nov. 29th, payable on or before Jan. 1st, 1863, at office 502 Montgomery St.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

**VIBBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

The **Succor G. & S. M. Co.** will hold its annual Meeting, January 6th, 1863, at its Office, Nos. 1 & 2, Montgomery Block.

**Hawley Mining Co.**—Annual Meeting for election of Trustees will be held at Office 204, Front St., on 5th.

**LIVINGSTON G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

**ISAAC'S G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due and payable at office No. 326 Clay St.

**KOHLER G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now payable at office 326 Clay St.

**EL DORADO G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 1st, and payable at office, on N. E. cor. of California and Montgomery Sts., or to Superintendent in Virginia City.

**IOWA MINING CO.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING CO.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**HAWLEY MINING CO.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING CO.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days—At the expiration of which time delinquent Stock will be sold.

**NAPOLEON COPPER MINING CO.**—The first annual meeting of this Company will be held at office N. E. corner of Sacramento and Montgomery Sts., on Monday, January 12th 1863, at 8 P. M.

**MADISON G. & S. M. Co.**—The books of this Company are open for issuance and transfer of Stock, at 608 Merchant St.

An assessment of two dollars per share was levied on the Stock of this Company, Nov. 13th, payable at once.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

## WASHOE MINING NOTICES.

**Caution.**—D. M. Tyrell warns persons against purchasing a certain 10 foot of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

**Ashland Co.**—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

**Eldorado G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

**La-Plata Oro Co.**—Gold Hill District.—An assessment of two dollars per share was levied, Dec. 26, payable at once, at Office of the Secretary, Court-house Building, Virginia City.

**Texas Co.**—Tennessee Ledge.—An assessment of 25 cts. per foot was levied, Dec. 22, payable on or before Jan. 21, 1863.

The Regular meeting of the Company for election of officers, will be held at the Comet Saloon, Virginia City, on Saturday, Jan. 21.

The North American Co., Gold Hill, will sell at auction,

Jan. 31, stock of shareholders delinquent in payment of assessments.

**Grass Valley Co.**—A meeting of this Co. will be held at the "Medan," in Virginia City, on Thursday, Jan. 15.

**ASHLAND G. & S. M. Co.**—An assessment of fifty cents per share was levied, Dec. 10, payable at the office of M. J. Power, Sec., B. St.

**UNION COMPANY, GOLD HILL.**—An assessment of fifty cents per foot has been levied, payable at the rate of ten cents per foot, Nov. 15, 22, 29; Dec 6, and 13, at the Company's office, Gold Hill.

**NORMAN SILVER MINING CO.**—An assessment of One Dollar per share was levied, Nov. 19th, payable on or before Dec. 31st, to the Superintendent in Virginia City, or at the office, No. 40, Montgomery Street, San Francisco.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

**THE SWEENEY CO., Gold Hill,** give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Michel.

**COLEDONIA TUNNEL AND MINING CO.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK CO.** lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Bach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

**LA CROSSE MINING CO.**—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

**HAWK EYE SILVER MINING CO.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**MOHEGAN CO., Cedar Hill.**—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LODE COMPANY,** give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder.

## MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**THIRD YEAR! VOLUME VI.—NEW SERIES!**

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

**To Chemists, Architects, Millwrights and Farmers!**  
This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to architects and millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.

Ten Copies for Six Months, \$16.

Ten Copies for Twelve Months, \$30.

Fifteen Copies for Twelve Months, \$44.

Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 50. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

### EVER & SMITH, Publishers,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY ..... JANUARY 5, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets, San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOGRAPHY and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspapers in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## AN IMPORTANT MINING QUESTION.

The Supreme Court of Nevada Territory, soon to convene, will have many knotty points of mining law to unravel. One will be whether a mining company, locating a surface claim, for ravine or placer mining, owns all mineral lying under the surface claim. A question precisely similar to this was adjudicated some years ago in the District Court of Nevada County. It was given to the jury, and they found a verdict to the effect that the owner of a surface claim was entitled, by virtue of that ownership to a quartz vein lying under it. But as the quartz vein proved to be of little value, the case was never carried up, and the decision is not regarded as a precedent; besides it was in opposition to the general opinion among miners as to what should be the law. It is a new question, and should be settled in accordance with principles of justice.

The question which now comes up is the action of the Chollar Gold and Silver Mining Company, of Washoe against the Potosi Mining Company. The Chollar claimed a ledge discovered by the Potosi Company, but which ran under surface ground located by the Chollar. On the trial, the Potosi Company insisted that that Company, as discoverers of a silver lead, had a right to follow the lead, with its dips, spurs and angles, wherever it ran. In pursuance of this view of the case, the counsel for the Potosi mine requested the Judge to charge the jury as follows:

"A location for surface and quartz is not a location of a ledge, and if subsequently to such a surface and quartz location another party locates a ledge, with its dips and spurs outside the limits or lines of such surface and quartz location, and discover the ledge, and strike it outside of such lines, then the locator and discoverer of the ledge has the right to follow the ledge, with its dips and spurs, wherever it may go, to the extent of his claim, even if it should run into the lines of the surface location."

The Judge refused to charge as requested; therefore this important case goes to the Supreme Court of Nevada Territory, to determine whether a prior surface location holds all minerals lying under the superficies of ground surveyed out into a quartz or placer mine, irrespective of any ledge.

THE stoppers for the Monitor, building at East Boston, are being cast by the Pembroke Forge, South Boston. There are two to each turret, and they weigh between five and six tons each. These stoppers close the hole when the gun is drawn in to be loaded. They are 26 inches thick, solid iron.

THE Pottsville Miner's Journal says that the total amount of coal sent to market this year is 6,927,997 tons against 6,922,975 tons sent last year, or a gain of 5,022 tons. The amount sent for the last week was 76,969 tons, against 61,418 tons for a corresponding period last year. The Journal adds: "The demand for all kinds of coal continues brisk. The dealers in some of the markets held back expecting the prices to recede, but they have been caught napping, and are now putting in their orders quite rapidly, and every additional steamer built only adds to the consumption of coal."

## COPPER MINING.

To those whose ideas of Copper Mining are associated only with the remarkable copper mining region of Lake Superior, where native copper frequently occurs in masses of many tons weight, and where its presence in smaller quantities is of almost every-day occurrence, the mines of California, with their yield of only 20 per cent, appear but poor in comparison. But when we compare our mines with those of Cornwall and Devon, in England, their richness, is most extraordinary. No advances have yet been made, in this city, on copper ore which assays less than 20 per cent. It is claimed that ores of less value are unprofitable for shipment.

The quantity of copper ore raised in Cornwall and Devon during a period of 126 years, ending with 1855, was, in round numbers, 8,000,000 of tons. During 70 years of this time the average yield of this ore was only eight per cent., yet copper mining was accounted a very profitable business, for both the miner and smelter. The average yield for the ten years next preceding 1785 reached the unusual figure of 12 per cent. During the period of 10 years preceding 1855, the yield fell to an average of only seven and a half per cent. The yield for 1859 was estimated by the authority before us (published in 1857) at only 6 3/4 per cent.—and yet the business was considered remunerative. Indeed in the village of Twista, in the Waldeck, copper ores are worked which yield only two per cent, and at Linz, on the Rhine, and several other localities in Germany, ores are worked which yield only one per cent, and from that to two—all worked in the gross! We propose to give a particular account of these cheap workings in our next issue, this article being too lengthy for them, to-day. Of course, ores of as low yield even as the general average in Cornwall, could not be worked, at present, in California, although we fully believe that by improvements in machinery, and reduction of wages by increase of population and reduced costs of living, the time will soon come when ores yielding from 8 to 10 per cent. may be profitably worked even in California.

The improvements which were introduced into the mines and smelting works from 1840 to 1855 kept the profits of the lower yields of the latter years fully up to those of the higher yields of former years.

The average yield of the entire mass of vein stuff raised in the English copper mines is estimated at only 3 per cent. The ore there, as well as in California, after being raised from the mine, is carefully assorted, not more than one quarter of the total amount going directly to the smelting works. The other three quarters being reduced by washing and assorting to a higher standard of yield before it passes to its final treatment. Of the particular mode of treatment we propose to speak in a future number of the Press.

There is very little if any ore taken from the principal mines in Calaveras county which will not yield 5 per cent., and all the ore ranging from that percentage up to 15 or 18 per cent., averaging, we believe, about three quarters of the entire quantity raised, is thrown aside, as of too low a grade for shipment. The accumulation of these low grade ores at the Keystone, Union and Calaveras mines it is estimated has already reached 20,000 tons, containing fully \$500,000 worth of copper. The Keystone Company has advertised for proposals to treat or purchase this poor class of ore at their mine, and a correspondent of the Bulletin, calls the especial attention of experienced miners and metallurgists to their ores. As remarked by that correspondent, we, also, are "satisfied that by means of water the ore can be reduced to the shipping value, or 20 per cent. A roller and jigg machine, driven by steam, would probably be all that is necessary to bring into market this immense quantity of copper. It may be that some process by fire might be advantageously used."

The lowest grade of ores in England and Germany, we believe, are chiefly worked by what is known as the "Linz Process"—first roasted and then treated with acids. Another process is also employed where the ores, after being crushed, are submitted directly to an acid process, without any roasting. Both of these processes are there found remunerative in ores as low as two per cent.

The refuse ores now at the mines in Calaveras, will yield an average of from 10 to 12 per cent., which is from 5 to 6 times as much as the lowest grade of ores worked in England. It is but fair to presume that such ores will not long be considered worthless in California.

The Action copper mine, in Canada, the ores from which are transported to Boston for treatment at a cost of \$6 per ton, yielded an average of only 12 per cent., yet the net profits on this mine for the months of July, August and September of 1862 were as follows:—

	Total Yield.	Total Cost.	Net Profit
July.....	\$16,682	\$6,500	\$10,182
August...	not given	not given	12,900
September	21,730	8,015	13,715

Net profits for three months.....\$36,745

This, it should be borne in mind, is the net profits of raising, transporting and selling the ore in Boston. No outlay is required for expensive reduction works, furnaces, &c. A profit of \$36,747 was realized from the above mine, in three months, from 12 per cent. ore, sold by assay as we are now selling Calaveras county ore in this market; and yet it is expected that with further improvements at the mine, a much larger percentage of profits will soon be realized.

With such facts as these before us we need have no fears lest the value of the Copper Mines hitherto opened in California should be overrated. That they will soon prove quite as productive of real wealth to the State as the mines of either gold or silver we will endeavor to show in our next issue.

## THE SHEBA MINE.

THE SHEBA MINE, as is well known, is the "Ophir" of the Humboldt District. It is situated at Star City, and is now opened and being worked in a thorough manner, under the supervision of Mr. Richard Powning, an experienced Lake Superior miner. We learn from a correspondent that two tunnels are now being run into the mine, one of which has already been driven a distance of 65 feet, and is 6 feet high and nine wide, thus offering ample room for the most extensive and economical working. About 150 tons of ore have already been taken out through this tunnel, ten tons of which were to have been crushed the past week, at the new mill just erected near the mine. We shall probably be apprised of the result of this crushing in a few days.

Only two shifts of two men each are now being worked; but a rise upon the course of the lead will soon be commenced, which will give employment to some 12 additional hands, as stoppers, who will be able to take out from 10 to 15 tons each twenty-four hours. The second tunnel has been commenced 100 feet below the first and is already in about 40 feet. Stoppers will soon be placed in this tunnel also. The mine is very favorably located for working, and will soon be able to give employment to fifty men, and turn out from 80 to 100 tons of ore each twenty-four hours. The prospects of this mine are certainly very flattering, and we trust the most sanguine hopes of the proprietors may be fully realized.

The same correspondent from whom we obtained the above particulars, informs us that Mr. Richard Homfray, late of Grass Valley, but now of Star City, has his mill nearly ready for starting.

AS IT SHOULD BE.—Senator Latham has telegraphed to a party in this city, that Government had determined to dispatch an armed convoy with each of the California treasure steamers hereafter, so that no fears of any future danger of capture and confiscation need be entertained by loyal treasure shippers. This intelligence came too late, however, to allay the excitement with regard to treasure shipments on the last steamer; and shippers, as a general thing, forwarded their treasure to England. If, as has been with some reason suspected, it has been the hope of English ship-owners, by means of their piratical "Alabama" to change the course of California's golden stream from New York to Liverpool, they have been for the time being, successful. But so soon as a government vessel shall be known to be in readiness to perform the assigned duty, the treasure will again assume its wonted channel, and the odium which the inglorious career of that "freebooter" has so justly attached to England, will have to be endured, with but the merest moiety of the paltry thirty pieces of silver for which she has sold her national honor.

Good brown paper is now manufactured at the Salisbury Paper Mills, in Orange county, from "cat tails," the product of the wild flag growing in low grounds all over the North.

## Our Mint, its Rules, Charges and Operations.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
 " from 300-1000ths. to 750-1000ths fine. 7cts " "  
 " " 750-1000ths to 950-1000ths " 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
 301 " 500, 7cts, " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coinage. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coinage, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

**MEETING OF THE LEGISLATURE.**—The State Legislature meets at Sacramento, to-morrow. It is to be earnestly hoped that the present body will profit by the experience of past Sessions, and so discharge the great trust committed to their care as to merit the approbation of their constituents, and materially advance the varied interests of the State. The election of a United States' Senator, and a suitable demonstration of the loyalty of our State and her earnest desire to do what she can to strengthen the arms of the general Government in its present terrible struggle with treason, are the two most important matters which will come before the present Session. The only further important duty of that body will be to devise ways and means to foster, encourage and stimulate the great industrial interests of our State. As the special advocate and representative of the great leading interests of mining and mechanics, we shall take especial pleasure in receiving from members orders to supply them with copies of the Press, during the Session, believing that they cannot fail, from time to time, to gather from our columns valuable and practical hints which may be of service to them in shaping such legislative action as may have a bearing upon the important interests which we represent. With earnest wishes that the session may be particularly valuable to the State and honorable and agreeable to themselves we wish them the heartiest complements of the season.

A COMPANY has been formed in Greece for the purpose of cutting a canal thirty-four yards wide and six deep across the Isthmus of Corinth, in order that the dangerous voyage along the coasts of the Peloponnesus may be rendered unnecessary. Such a canal was often contemplated, and was even begun, in ancient times, but it has never been formed.

**REPAIRING THE "MOSES TAYLOR."**—The opposition steamer *Moses Taylor* has been hauled into her berth at Mission St. wharf, and repairs upon her engines are being rapidly pushed forward. A new foremast will be placed in her, and the rigging, spars, etc., are to receive a general overhauling. The *Taylor* will be ready to start for Panama on the 21st of January.

**EFFECT OF MUSIC ON THE SICK.**—The effect of music on the sick has been scarcely at all noticed. In fact, its expensiveness, as it is now, makes any general application of it out of the question. I will only remark here that wind instruments, including the human voice, and stringed instruments capable of continuous sound, have generally a beneficial effect.—while the piano-forte, with such instruments as have no continuity of sound, has just the reverse. The finest piano-forte playing will damage the sick, while an air "Home, Sweet Home," on the most ordinary grinding organ, will sensibly soothe them, and this quite independent of association.—*Florence Nightengale.*

## Mining Stock Report.

REPORT OF SALES  
At the San Francisco Mining Stock Board,  
For the week ending December 27, 1862.

Names of Companies.	Total No. Shares.	Shares per ft.	Par Value.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
Ophir - - -	16,800	12	\$300						2000

§ New Stock.

SAN FRANCISCO, Jan. 5th, 1863.

## STOCK REMARKS.

The Mining Stock Market has not been particularly active during the past week.

Ophir opened at \$2,300 and closed at \$2000. The depreciation has been caused in part by the report that the mine presents a less favorable appearance than for some months previous, and to some extent by the prospect of light dividends for some months to come, in consequence of the payments to be made to the Virginia Company, and from other causes, all of a temporary nature. The Directors will meet to-morrow to declare a monthly dividend.

Gould & Curry commenced the week at a decline of \$50, but closed firm at old rates \$2,700. The tendency of this stock is to advance. Much speculation is indulged in with regard to future dividends. January dividends have been sold as high as \$75 and \$80 per foot. Ten stamps and four amalgamators have been started in the Company's mill, which work satisfactorily. The first bar from the mill was shipped for this city on the 31st ult. It was valued at \$1000. The entire 40 stamps, with the complement of amalgamators will be put in operation during the present week. The results of their work will soon determine the actual value of the stock.

Chollar is still in demand at from \$350 to \$365. Shares are in demand at \$360, and there is not sufficient stock offered to supply the calls.

Potosi.—The decision of the Supreme Court in the case of the Chollar vs. Potosi will probably be rendered to-morrow. For some reason or other the impression seems to prevail that it will be favorable to the latter; hence the advance of its stock the past week from \$90 to \$110. Five shares are quoted by Bates & Williams at \$120 per foot.

Savage is in demand at \$600. Very little stock is offered. The annual meeting of stockholders for the election of Trustees will be held on the 13th inst. (See item in 2nd column, 2nd page, in reference to this Company.)

Sierra Nevada has somewhat declined from last week, but is in demand at previous quotations. There appears to be a desire for speculation in this stock, which will probably run it up to higher figures the coming week.

Burning Moscow is in demand at slightly advanced rates. It has been quoted the past week as high as \$62½.

Mount Davidson is still quoted at old rates.

Charles Caney in demand at \$17—dull at its highest quotations, \$20

Meredith exhibits a slight decline, but has many friends.

Iowa is quoted from \$130 to \$140. In demand at \$135.

Wide West (New Stock—consolidation with Johnson Co.) is quoted at from \$265 to \$290. At the close of the week, quite firm at \$285. But few transactions reported.

## TRANSACTIONS IN SHARES. \*

Ophir—60 shares at \$2,300 per foot; 68 at \$2,200; 84 at \$2,100; 78 at \$2,000; 24 at \$2,200; 36 at \$2,100; and 60 at \$2,100.

Gould & Curry—40 at \$2,650; 16 at \$2,700; 20 at \$2,700.

Chollar—20 at \$365; 20 at \$360; 40 at \$365.

Savage—10 shares at \$700.

Potosi—10 shares at \$95; 40 at \$100; 20 at \$110; 5 at \$130.

Sierra Nevada—10 at \$62½; 10 at \$72½; 15 at \$60; 35 at \$62; 5 at \$62½

10 at \$65. Sanborn & Co. report 174 at from 62½ to 65

Burning Moscow—10 at \$59; 10 at \$61. Sanborn & Co. report 113 at from 60 to \$62½.

Mount Davidson—350 shares changed hands at from 4½ to 5 dollars.

Charles Caney—10 at \$20; 5 at \$20; 40 at \$21.

Meredith—105 shares are reported at from 20 to 22 dollars.

Wide West—20 shares at \$280; 9 at \$290.

Rogers, F. D.—10 shares at \$17.

Union—(Russ District), 100 shares at \$24.

Burnside—10 shares at \$20. Real del Monte—5 shares at \$13.

\* Quotations made at given rates per foot.

## Coso Stocks.

The Josephine has been but little inquired for the past week. It changed hands at the Stock Board from 10 to 13 dollars.—Holders asking \$17 to \$20  
 Coso—Not quoted, \$25 asked.

Willow Springs—held at \$45. Sold at \$10.

## Mexican Mines.

Mina Prieta finds no recent buyers, but is held at \$130.  
 Dios Padre is quoted at from 29 to 36 dollars..

## WASHOE STOCK REPORT.

[Compiled from the Daily Territorial Enterprise.]

Advice from the Virginia City Stock Market, since our last issue report but little business, more from lack of sellers than buyers. The stimulus of action and pressure of holiday demands have brought some good stock into the market at fair rates. At latest accounts the market was very firm. Nearly all the Stocks of admitted value are advancing. The Enterprise asserts its knowledge there is "a positive demand from capitalists for ground in twelve or fifteen companies in Virginia district alone, but so carefully are operations conducted that the stocks in request are scarcely suspected. In due time the veil of secrecy will be withdrawn, when the stocks so quietly dealt in, will, of course advance. We do not deem it advisable to be more explicit at present."

The Enterprise speaks as follows of the effect of its pet Incorporation Scheme on the Stock Market—

"Thus far, the effects of the Territorial Incorporation Act point to nothing like disaster. Contrary to the predictions of California crows, orders from San Francisco continue to pour in upon our dealers, and confidence in the safety of investment here is manifestly strengthened by the Act. Hence the irrefragable inference, that the gloomy prophecies of certain parties here, as well as in San Francisco, are simply a concerted system of "bearing," of which advantage will be taken in due time. Timid holders will do well to make a note of this fact."

**WINTER WORK.**—The work of prospecting appears to be going on with as much energy as at any time during the Summer. Most companies have so well prepared for Winter, that a light snow storm does not inconvenience them in their operations. Many developments are being made in various claims in this and Gold Hill districts, which cannot fail to attract the attention of capitalists and induce investment.

What bids fair to prove an important discovery has been made just to the West of Gold Hill, by the Dunn Company. The indications promise a rich silver lead, and differ materially from anything heretofore found in that district. Five dollars per foot is offered for ground.

It was reported on the 24th ult. that a very fine quality of ore had been struck in the El Dorado, resembling the Ophir, etc., but we do not see any advance in its quotations, \$60, with \$70 asked. It is claimed that the ledge is now 44 feet thick, with a paying vein of 12 feet.

There are also reports of rich gold bearing rock being struck to the north of Cedar Hill, at a locality through which it is thought the Ophir lead passes.

The Utah company is also rejoicing over a new development, the character of which is not announced. It is quoted at \$45—a material advance.

There is less disposition manifested to purchase claims in litigation than was apparent last Summer. As a consequence, Moscow is dealt in sparingly, while Madison, Geller and La Crosse are a drag in the market, they being offered respectively at \$25, \$38, and \$15.

The Enterprise of the 24th ult. says that the Potosi could not then be purchased in Virginia City for less than \$100. It was quoted at the San Francisco Stock Board on Wednesday last at \$110, an advance of \$20 on previous quotations.

Norton stock remains quiet; none offered in the market. Several tons of rock from the mine in front of the Company's office, will compare favorably with the best ore ever taken from Cedar Hill.

The Yellow Jacket Company are having rock from their mine crushed with fine results.

The Union Company, Gold Hill, are having a small quantity of rock from their mine practically tested by crushing at a mill, which will tell something of its value.

Ashland is offered for \$10 per foot, a small lot changed hands at these figures.

Ten feet Hazel Green sold at \$4 50 per foot.

Oriental is offered for \$4, without sale.

Nevada, which has been in demand for sometime at low figures, is with-

out sale. The stock is offered at \$6 per foot.

Five dollars per foot is offered for North American.

Baltic is offered at \$20 per foot.

Ten feet in the Bloomingdale changed hands at \$4 50; Zouave is offered at \$9 00.

Birdsall is quoted at \$17; La Crosse, \$18; Sacramento, \$35 to \$40; Baltic, \$20; Sierra Nevada, \$60; U. S. Tunnel, \$0,000 per share; Cedar Hill Tunnel, \$4.

## HUMBOLDT STOCK.

Considerable Humboldt stock continues in market, but aside from the Mars, Cuba, Sheba, South Extension of the Sheba, and three or four other claims, there is little or no inquiry in that direction. There is also a large quantity of Eagle and Silver Mountain district stock, but entirely without buyers.

The following stocks, not enumerated above, are in the market in Virginia City, and held at the figures annexed:—

Santa Fe - - - - -	\$25 00	Summit - - - - -	\$5 00
Empire - - - - -	5 00	Washington Leds - - - - -	6 00
McBee - - - - -	25 00	Milton - - - - -	20 00
Belvidere - - - - -	15 00	Laboring - - - - -	15 00
Poytona - - - - -	25 00	Sweezy - - - - -	25 00
Durgan - - - - -	4 50	Caledonia - - - - -	8 00
El Dorado - - - - -	70 00	St. George - - - - -	4 00

The Australian gold fields differ much in character from ours, being mostly in deep diggings, where the hydraulic hose and sluice cannot be used to advantage, or where at least they are not employed so extensively as in this State. They were very rich at first, and for a time they turned out a stream of gold more abundant than that which flowed from the claims of California.

## GIFTS, DONATIONS AND SUBSCRIPTIONS

To the work entitled "THE METALLIC AND AGRICULTURAL WEALTH OF THE PACIFIC STATES." The publisher desires to thank the several gentlemen whose names are hereto appended, for their magnanimity and aid in behalf of this important work.

Samuel Brannan, Esq., Citizen.

We would call the attention of our readers to the Stock Report which we give from week to week in the columns of the Press. This report is very full and carefully made up from the most authentic sources, embracing all attainable transactions both in this city and in Washoe. Our report for this city, embraces a full statement of the sales at the Stock Board—each day's operations being presented in a tabular form. We also re-produce the substance of the several Mining Circulars issued in this city. In order to give each week's transactions, full and complete, we have changed our publication day from Saturday to Monday. We intend to make each number of the Press a full epitome of the mining intelligence of the previous week, and add thereto such matters of general interest and information as shall be thought useful and advantageous to the miner, and the mechanic.

## Important Publication.

We have been favored, by the publisher, with the title page and prospectus of the quarto work entitled, "The Metallic and Agricultural Wealth of the Pacific States." The editor of this work has recently disposed of the "Mining and Scientific Press," with the view of devoting his entire attention to the publication of the work; to this end he is making arrangements for an early visit to the Atlantic States and Europe. The work if carried out according to the prospectus, will be one of the most valuable publications yet presented to the public, and will prove of incalculable benefit to California and the Pacific Coast generally, in bringing the immense mineral wealth of this region more prominently before the Capitalists of Europe. The object is a laudable one and ought to be encouraged. Mr. Silversmith is one of our oldest citizens and is well acquainted with the subjects of which he treats. He desires but little aid and that we trust he will readily obtain. The following is the prospectus:

## PROSPECTUS TO THE PEOPLE OF THE STATES OF CALIFORNIA, OREGON, AND ADJACENT TERRITORIES.

The Subscriber, one of your earliest citizens of California, and for the most of his time engaged as a journalist, and particularly of late in a journal devoted to the chief resources of the Pacific States, respectfully submits the following plan and proposition for the purpose of bringing hitherto England, France and Germany the working classes, mechanics, artisans, miners, and metallurgists for the purpose of developing the resources of our thinly populated States and Territories, thereby reducing labor, the establishing of factories, the occupation of the millions of acres of arable land now lying dormant, and to work our mines. The benefits accruing to our Government—to marine conveyances—the merchant—the manufacturer, the mining companies and professional companies, cannot but be beneficial, providing the facilities are offered to such emigrants, and according to the tenor of our laws governing such. For these purposes the subscriber desires to seek only the necessary or pecuniary aid to take him across the Pacific and Atlantic, so that he may be enabled to lay before the people of Europe a work which he has compiled from authentic sources, comprising the mineral wealth of the Pacific States, including partly Mexico, Lower California, British Columbia, etc., together with a synopsis of the climatology, agriculture, arts and manufactures, with interesting statistics of our imports exports, and population. Also, the organic acts of our State, the local and general laws governing mining, the Free-emption Act, and kindred subjects pertaining to the Pacific States. The author reserving for himself the right of translation of this work (which has cost him three years of his time to collect and compile) in the German and French languages.

He contemplates making the tour to the Atlantic States and Europe in February or March, 1863, and will equip himself with the mineral materials, fossil remains, etc., and illustrate them by diagrams and discourses throughout the Atlantic States and Europe.

Such a work which your petitioner has in view cannot be published in this State without an extraordinary outlay, nor have we the materials, artists or skill in copperplate or wood engraving. The work will comprise from 400 to 500 pages, to be handsomely illustrated with colored plates, maps, etc., quarto form. The subscriber will add thereto a complete list of all the associations and companies, especially mining companies.

He goes to Europe for the purpose of seeing all the manufacturing places, machines and utensils; also to the leading mining districts and metallurgical establishments, to acquire from the best sources there the best mode of treating our rich minerals, and lay these several important features before our people through the Mining and Scientific Press, and the work be hereby offers. But the most important subject in his mission is the inducements he will offer to Europeans of our immensely rich mining fields and agricultural lands, together with the great advantages offered by a liberal and protective government for industrious citizens.

The subscriber, therefore, calls upon the citizens in the Pacific States who have the interests of our new States nearest their heart, to aid him in this grand but laudable undertaking with means. Each subscriber will be furnished with a copy of this work, which is designed to be useful in the counting house, to the professional man and miner. The author desires to state that whatever aid or subscription he may be furnished with by the people of this State he will refund after the publication of the work, or leave the amount to be taken out in books.

Respectfully submitted,

JULIUS SILVERSMITH.

RECENT PATENTS—Granted to CALIFORNIA INVENTORS through the Pacific Patent Agency, J. SILVERSMITH, Solicitor:

HERMAN CAMP,—Patent for Quartz Crusher and Amalgamator.

W. H. RICHARDSON—Patent granted for Washing Machine.

E. E. MATTESON, Nevada: Hydraulic Derrick. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

ELANDER HEATH, San Francisco, Spiral Spice and Sage Mill. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

G. F. DEETKEN, formerly of Nevada: Apparatus for separating Gold from Pyrites. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

## Routes and Fares from San Francisco to Foreign and Domestic cities.

Pacific Mail Steamship Company—Steamers leave for New York via Panama, on the 1st, 11th and 21st of each month. 1st cabin, \$250; 2d cabin, \$200; 3d cabin or steerage, \$100.

Nicaragua Steamship line, Ross, Dempster & Co., agents. —Steamers leave for New York via isthmus of Nicaragua, on the 21st October, and semi-monthly thereafter. Price of fare not yet stated.

To Portland, Victoria, &c., \$60. Crescent City, Trinidad, &c., \$20 \$30. San Diego, Monterey, and Los Angeles, \$20 to \$30. Sandwich Islands, per sailing vessels, \$100 to \$150. Australia, sailing vessels, 1st class, \$250 to \$300, China and Japan, sailing vessels, 1st class, \$200 to \$250. Mexico, \$30 to \$50.

California Steam Navigation Company dispatch steamers daily to—Sacramento, \$5; Stockton, \$4; Petaluma, \$3.

Overland Mail Company—Stages leave daily for St. Louis via Salt Lake; fare, \$200.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, DR PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 1 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hackneyed course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death and always more tedious than the disease. Patients a daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone." I was bled and blistered, then cupped two or three times week—had a blue pill prescribed for me at night, and sal in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise with fifty other inconsistencies, the aggregate of which sure blindness. Patients should be careful and not pla their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. I PARDEE has from sixty to one hundred patients under daily supervision, and, with but very few cases, they have been treated by other physicians before applying to him—all to no benefit. Those who are doubtful are permitted call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movement of the real eye, and that they look so life-like that no one could tell them, when properly inserted, from the real eye. The eyes are sold reasonable.

All the operations performed, such as "Strabismus," cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Pl Hotel—old No. 217, up stairs.

PACIFIC MAIL STEAMSHIP COMPANY'S line to PANAMA  
connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company, at Aspinwall.

FOR PANAMA,

The following Steamships will be dispatched in the month of January, 1863.

Jan. 10th—St. LOUIS, Captain E. S. Farnsworth,

21st—GOLDEN AGE, W. H. Hudson, Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York

For freight or passage, apply to

A. B. FORBES, Agent.

jet

Corner of Sacramento and Leidesdorff sts.

## OPPOSITION

People's Line to New York.

ROUTE CHANGED FROM NICARAGUA TO  
ISTHUS OF PANAMA.

Through in Twenty-one Days!!!

FIVE DAYS AHEAD OF THE MAIL.

The fast and favorite Double Engine Steamship

MOSES TAYLOR,

E. HOWES, Commander.

Will be dispatched for

PANAMA,

From Mission street Wharf.

Punctually at 4 o'clock P. M., of

WEDNESDAY, - - - - - JANUARY 21, 1863.

Connecting at Aspinwall by the Panama Railroad,  
and thence by the Splendid Steamship

AMERICA,

2,000 Tons. - - - - - JEFF. MAURY, Commander.

The America has proved herself the swiftest Steamship afloat, and in comfort,  
cleanliness and regulation is incomparably superior to any other running  
to Aspinwall.

The Moses Taylor is known to be the fleetest ship on the Pacific, and passengers  
may confidently anticipate making the month trip in 22 days, as  
obstructions which are said to have been thrown in the way of passengers,  
by the Nicaragua Government, cannot possibly occur on this route.

THE PEOPLE'S LINE

Has been established to meet the universal demand for an

OPPOSITION,

And every Californian should give it a preference for the public good, as  
well as his own private advantage, which will be secured by

Reduced Fare, Good Accommodations, and Quick  
Trips.

This line is intended to be a permanent one, and is not put on for the purpose  
of being bought or driven off. Speed, safety and the utmost comfort of pas-  
sengers are the main objects. To secure these no merchandise freight (other  
than specie) will be taken. The MOSES TAYLOR is built with Water-  
Tight Compartments, and is unequalled for safety as well as speed.  
For information or passage apply to

I. K. ROBERTS, Agents,  
425 and 427 Battery street.

## REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL WORKS  
is removed to 318 California street. Having enlarged our Works at  
North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or  
Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings  
reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments.

S. C. BRADSHAW, Agent,  
318 California street, near Sansome, up stairs.

## LABOR-SAVING

Rock Drilling Machines.

TWO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRY-  
men. The subscriber, Patentee and Agent for GARDNER'S PATENTS,  
will continue to receive orders for

HAND, HORSE, AND

STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galle-  
ries, etc., one man performing the labor of three in the ordinary way.  
A FOUR-HORSE POWER MACHINE, operated by one man, drives a ma-  
chine capable of drilling a four to six inch diameter hole in granite four feet  
deep, and in hard limestone, six feet per hour—the rapidity of the work  
being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the  
machine, and its entire success in reducing the cost of drilling holes to one-  
tenth of the former expense, and on a rock excavation of any extent, from  
fifty to seventy-five per cent. on the entire work. Responsible parties who  
have rock excavations to make in any part of the State, the subscriber will  
undertake and guarantee to perform the work required, at a saving of at  
least twenty-five per cent. over any other process.

Dr. Van Zandt,  
Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practi-  
cal Medicine.

The Mysterious Problem of Material Nature, Electricity!  
Made Subservient for the Cure of all Nervous  
and Spinal Diseases.

THAT THIS PRINCIPLE, successfully applied to diseased states  
of the system, is to prove the great sought-for necessity, long wanting  
by physicians, to aid their medicines in overcoming organic and functional  
derangements of the human body. It is a part of the great principle of vi-  
tality known as nervous influence and necessarily must have much to do in  
obviating diseased action.

### Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equi-  
librium of the ELECTRIC principle; and should this secret and hidden equi-  
poise of health be broken or lowered—should the body be negatively elec-  
trified when it should be positively charged—is not the current broken, and  
is there not a war of forces going on in our system? This needs correcting  
and in order that the tissues of the body should be susceptible to remedia-  
agents we must first restore and

### Awaken the Magnetic Life Within Us,

The spinal and sympathetic nerve systems. Believing as I do most firmly  
in this great magnetic or electrical intensity of the earth, with its influences  
upon our bodies in health and disease, I am led to take advantage of the  
press, through which to awaken attention to the subject, that good may  
come to all.

### No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life  
blood, render the stomach, liver, heart, kidney and all the natural func-  
tions active by ELECTRICAL excitation, and at once the aged, the palsied,  
the nervous, the debilitated, the melancholic, the dyspeptic and the invalid  
revive under its benign influence.

### To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and  
office practice, is owing to his correct views of the origin of all their mal-  
adies. Ladies can consult him with entire confidence, as he is no speculator  
upon human ills—but is proving himself the only member of the legitimate  
profession in California who is really successful in removing those ills which  
are the peculiar province of the sex. His high appreciation of their deli-  
cately attuned nervous organism, together with their great sympathetic  
life, renders him doubly able to assuage those silent complaints which  
they bear so patiently and so long. No social disgraces need longer af-  
fect our home circles; for he can arouse the stricken energies; restore the  
wonted tonicity of the body; awaken the melancholic and desponding; ar-  
rest those drains which cause so much anxiety; cure those protean mal-  
adies which have so long

### Buffed the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at  
the stomach, wandering pains, wasting away of strength; extreme debility  
and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that  
general depression of life's powers, which go to render her life a misery  
and death a boon. Dr. Van Zandt, with his new method of exciting the  
Electro-Galvanic current, together with his remedial measures which are  
adapted to the necessities of California, will assure you of a complete and  
radical recovery of all bodily and mental infirmities, and will restore you  
to usefulness; and spare you a blessing to your family and to society.

### All the World Over

wherever disease exists, whether special to the soil and climate or com-  
mon to all regions—epidemic or casual, acute or chronic, contagious or non-  
contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibri-  
um, especially in California, as it is to give food to the starving. This state-  
ment is based upon a series of facts extending through many years, and  
verified by hundreds of patients; so that no principle of science, no rule of  
experience, no result of any well known cause, rests upon more sure and  
unshakable foundations, than those which underlie the world-wide reputa-  
tion of Electricity for the cure of all nervous states of the body, faulty di-  
gestion, mental and physical debility or prostration, coughs, asthma, wan-  
dering pains of a rheumatic, gouty or mercurial character, and all forms of  
disease, the result of scrofula or coarctate habit of body.

### None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—  
melancholy which you cannot shake off—loss of power which you cannot re-  
gain—depression of spirits which weigh you down—wastefulness that knows  
no sleeping—business that languishes for want of energy—a void which no  
society can fill—suspicion which no assurance can allay—Go to Dr. Van  
Zandt, for his great success, and the safety with which he administers his  
new method of Electrical excitation, together with his remedies, which are  
adapted to the requirements of climate and constitution, will assure you of a  
radical removal of all bodily and mental infirmities, within the scope of  
science and man to remove.

### The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt  
has made these afflictions an especial study, and that he is the only Sur-  
geon on our State, who has a diploma for that branch of practice. Very  
many of the eye and ear troubles are purely deranged nervous actions, and  
are cured by his electro-galvanic battery—as amaurosis, squinting, cataract,  
floating specks before vision, twitching of the eyelids, nervous deafness,  
roaring and buzzing noises in the ears, giddiness, etc. All operations suc-  
cessfully done at the delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov-29—3m

FREDERICK KESMODEL,  
Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September,  
1854, also in 1861 for California and California Cutlery.

The attention of those afflicted with HERNIA or Rupture, or any one in-  
terested, is called to his new method of fitting and adapting Trusses to the  
different cases. It is a well known fact that there has as yet been no system  
of fitting Trusses. There are many different styles which have proven good  
in many cases, but they are all uncertain and cannot be relied on, and in  
severe cases are altogether useless. The following are some of the advan-  
tages I claim for these Trusses above any and all others: First—The Pad is  
formed on the parts to be decompressed by taking a plaster cast. Second—  
Having a correct model, it enables me to make the Pad of any desirable  
material, such as horn, ivory, etc. Third—The Pad is so adjusted to the  
spring that no movement of the body will move or displace it. There are  
many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,  
Inventor and Patentee.

ap8 1f

## 50 lbs. MARINE AND Fire-Proof Paint,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

### DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

### 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire-Proof, and costing less than any paint.

### DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead, mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. Fouque, Superintendent.  
WORKS, North Beach; Office, 318 California st., San Francisco.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and divided out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest.

The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,

No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office.

no 13 6mo

## V. SQUARZA'S Punch Factory.

MR. SQUARZA IS FAVORABLY known in this State for his Anti-Divorce Liquors and similar productions, as manufactured by him. We may mention that Mr. Squarza is an fait in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,
Cognac do.	Whisky do.
Arac do.	Kirschwasser do.
Anti-Divorce Punch,	Cocoa do.
Coffee do.	
Tea do.	Morning Comfort,
Pineapple do.	Kuemmel,
Anisette,	Brandy Cocktail,
Kirschwasser,	Anti-Dyspepsia Bitters,
Appetiser,	Ladies' Tears.

And CHAMPAGNES of all brands.

### WASHOE

## Stock Exchange,

N. E. cor. Montgomery & Merchant sts.,  
SAN FRANCISCO.

### L. W. NEWELL & CO.,

Buy and sell Washoe, Esmeralda and other Mining Stocks and Securities.

### PHILADELPHIA BREWERY,

Second St. corner of Folsom, SAN FRANCISCO

Heischel, & Wieland Proprietors.

Thankful for past patronage to a discriminating public, we beg leave to apprise at the same moment our many friends and patrons that the above well known Brewery has been permanently located in our new premises, on Second street—the former residence of Capt. Folsom where we shall endeavor to continue in furnishing our numerous patrons with the best article of "Beer." We shall strive to perpetuate the good reputation for promptitude and the faithful execution of orders as heretofore, and thereby increase our custom.

## FULTON FOUNDRY & IRON WORKS.

### HINCKLEY & CO.,

MANUFACTURERS OF STEAM ENGINES,

Quartz, Flour and Saw Mills; Cast Iron Fronts for Buildings, Mining Pumps, and all kinds of Machinery Amalgamators, Etc.

Nos. 47 & 49 First Street,

Between Market and Mission, San Francisco.

ALL kinds of Iron and Brass Castings furnished at short notice. Every style of finishing to iron when cast. Repairing to Machinery neatly done. Pattern Making in its various forms.

D. B. Hinckley, Wm. E. Worth. Wm. A. Field.

## DONAHUE'S

Union Iron and Brass Foundry,

CORNER OF FIRST AND MISSION STREETS, SAN FRANCISCO.

The First Established in the State.

MANUFACTURE STEAM ENGINES, SAW AND GRIST MILL MACHINERY, Boilers, Quartz Stampers, Amalgamators, etc., at reduced prices. Have now the largest and best assortment of Gear and Machinery Patterns in the State, a list of which will be forwarded to anyone desiring it, free of cost.

PETER DONAHUE.

## LEWIS COFFEY AND RISDON,

STEAM BOILER AND SHEET IRON WORKS.

The only exclusively Boiler Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work, the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner Bush and Market Streets. Opposite Oriental Hotel, San Francisco, Cal.

LEWIS COFFEY J. N. RISDON.

### PALMER, HANSCOMB & CO.,

## GOLDEN STATE FOUNDRY

AND MACHINE WORKS.

First Street, near Market, San Francisco.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast. San Francisco, November 29, 1862.

Duplicate parts of Threshing and Reaping Machines and Threshing Teeth made to order, on the most reasonable terms. Steam Engines and Boilers constantly on hand, and for sale cheap. Screw-Cutting and Turning Lathes for sale. DEVOE & CO.

# Mining and Scientific Press.

A JOURNAL OF MINING AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI. SAN FRANCISCO, MONDAY, JANUARY 12, 1863. NO. 11.

## An Important Mining Case Settled.

A heavy mining case which for the year past, has closed from work several of the most important mining operations in Grass Valley, has recently been amicably settled without recourse to the tedious and expensive process of law. The suit was brought by the Mount Hope Company, of New York City, against Chavanne & Co., of Grass Valley—being, we believe, a question of title. An injunction was laid upon the operations of Chavanne & Co., which also had the effect of closing the extensive operations of Messrs Watt & Co., Scadden & Co., and others, thereby seriously depressing the general industrial pursuits of the thriving mining community in which these works are located. We congratulate all parties concerned in their fortunate deliverance from an embarrassment more provoking than serious. We learn from the *National* that the citizens of Grass Valley were quite jubilant over the happy termination of the matter, as well they might be.

## NEW PROCESS FOR WORKING QUARTZ.

We have seen the drawings of a new machine for extracting gold and other precious metals from its matrix, which was patented about two years ago, and since which time the patentee has been diligently engaged in perfecting and reducing the same to practice. The machine has been put to practical work at one of the mills on Col. Fremont's Mariposa estate, where it has reduced quartz from several different veins, with the most complete and uniform success gaining more than one hundred per cent over the best apparatus heretofore employed there, at every trial upon poor qualities of rock. The patentee is now in this city busily engaged in erecting one of his machines which will be ready for operation in a short time. Due notice of its time of starting will be given and the public and all interested will be invited to examine the machine, and witness its working. No chemicals are employed in the process, which is simple and cheap. The inventor is a gentleman of high scientific and practical attainments, and, from what we have seen and learned, we are inclined to the opinion that the invention will prove a most complete success. At the proper time we shall give a full illustrated description of the same.

THE HENNESSY PASS is reported in fine condition for traveling. Stations have been located at every three miles on the snow belt, and whenever a storm commences ox-teams are immediately sent out and the track kept constantly beaten down. Stages run daily over this route.

Fogs are sometimes so thick in London that the gas has to be lighted in the streets as well as houses. A year ago last winter they were thus lighted on several occasions, during the entire day.

WHEELER'S PATENT SEPARATOR.

A represents a cup on the top of a hollow shaft for the admission of water.

B is the driving and loose pulley.

C is the horizontal driving shaft.

D is the driving gear.

E is the beam across the top of the machine which supports the gearing.

F is the upright hollow shaft which passes through the hollow journal on the gear wheel D, and is driven by a "feather" riveted on the outside of the shaft.

G G G G represent four hollow arms attached to the upright shaft F. These arms are perforated on the under side with small holes through which the water is introduced into the pulp, when diluting it.

H H H H represent the mullers attached to the hollow arms, which rub on the bottom of the Separator, for collecting the amalgam and quicksilver into the bowl M, in the centre; the bottom of the Separator being slightly concave.

I is the side of the Separator.

J is the tube from the bowl M, through which the surplus quicksilver passes out into a dish, as fast as it accumulates in the Separator. In the lower part of the tube a cock is placed, through which the quicksilver is drawn off entirely from the bowl M in the process of "cleaning up."

K is a forked lever which is used to raise the shaft F, with the arms G G G G, when the machine is stopped; thus preventing them from becoming fastened by the ore in the machine settling around them.

L is a pipe and cock for introducing water through the hollow shaft F, and the arms G G G G into the pulp for the purpose of diluting the same.

## Governor Stanford on Taxing the Mines.

Gov. Stanford, in his late Message, makes the following, practical and sensible remarks on the subject of the proposed taxation of the mines:—

The question of taxing mining claims by the General Government, after a long slumber, seems to be again revived. The agitation of this subject I cannot but regard as extremely impolitic. In a vast majority of claims it is impossible to estimate their value above what they may afford to the laborer from day to day, and with most of the balance there can be no certain permanency or reliableness of value upon which an assessment could be made with confidence or with satisfaction. A tax upon these claims can never be laid that would be just in its burdens or equitable in its results. When the sagacity and toil, the anxiety and patience, of the miner are rewarded with success, the results of that success, become the subject of taxation and the source of revenue. There can be no question that the people of the United States have reaped a greater harvest

of riches from our mines, under the liberal policy of the Government hitherto pursued, than they would have done had the discovery of our mineral wealth been immediately followed by Federal burdens, which must, of necessity, have been unequally imposed. It is a well known fact, that the yield of our mines finds an almost immediate distribution among our people, a fact that tends as much to strengthen the Government as though that yield went directly to her coffers. It is also well known, that while their yearly product is now equal to what it ever was, and while other interests and other communities are, through this influence, increasing rapidly in wealth, the mining communities do not advance—in fact, it is a question if they do not retrograde year by year.

Is it well, then, to place any discouragement upon an interest of such vast importance? Should it not rather be carefully fostered and judiciously encouraged?

Improvements above a certain amount upon mining claims, might, very justly, be made the subject of taxation with every other species of property which is created by wealth, industry, or skill; but if the General Government shall determine to change her policy as to our mines, and must have revenue direct from them it were better to dispose of the lands upon which they are found, in small quantities, having a just regard to the acquired interests existing under the past policy of the Government relative to them. I can see no good reason why the Government should retain to her use mineral lands more than agricultural lands for both must be equally developed by the industry of individuals, and both, without that industry, would be valueless to a nation.

\* \* \* The subject is one of importance, but I cannot here discuss it to the extent which it deserves. It is a good rule, however, "to let well enough alone," and is seldom departed from with advantage.

## MINING NOTABILIA.

**ESMERALDA MINES.**—Great activity appears to be manifested in working some of the principal mines in Esmeralda. The Wide West, and Pride of Utah are especially mentioned. We see it stated that still another lot of very rich ore from the former mine is about to be shipped to this city to be worked, which it is confidently expected will yield \$700 to the ton! Already four hundred tons of rock are out, and this, with the amount to be taken out during the winter, will keep four mills constantly at work till spring. A late number of the *Star* gives a lengthy description of a new quartz mill recently constructed at Aurora by John D. Winters, which will cost in the neighborhood of \$90,000.

**HUMBOLDT.**—Extravagant reports are current of a new Silver mine recently discovered near Fort Churchill, and known as the Blue Leaf. The mine is owned by a company of Germans, and is said to produce ore far superior to anything ever found in the Ophir or Mexican mine. Assayers and other competent judges of ores have declared this to be a fact—so it is said. It is more than probable that the country may produce a vein as rich, or even richer than the Ophir; and it is not at all improbable that the industrious Teutons aforesaid may have stumbled upon it.

A correspondent of the *Marysville Appeal* says that of the 6,000 claims that are recorded in this District, the Wide West, Antelope, Pride of Utah, and Esmeralda take the lead—not because they produce better paying ore, but that many other mines which prospect well and show well defined ledges have no moneyed managers, and have to wait till some men of means and business capacity take hold of those rich but neglected silver deposits.

Great complaint is made of a lack of suitable machinery in that district, and the writer above alluded to thinks any person will do well who will introduce some improvement in that particular.

The Pride of the Antelope, Gen. Jackson and Mount Broley are turning out rich ore. They were located some two years ago, but had to keep the native silver till touched by the magic hands of San Francisco speculators. The Wide West mill will be completed in about a month, and thus afford a better opportunity to those who cannot bear the expense of sending their rock to San Francisco for assay, to test the quality of their respective ledges.

The Territorial *Enterprise* learns from a gentleman direct from the Humboldt, that a very rich silver ledge was discovered about a month since in the Buena Vista District, the croppings from which assay \$1,600—it is called the Sargent ledge.

The Monitor, another new discovery is said to be proving itself exceedingly rich. Business in Humboldt is slackening considerably since Winter set in. John O. Fall's mill at Buena Vista was to have gone into operation a week ago Saturday, on some choice rock from the Mars and National leads.

**VIRGINIA CITY.** A recent run of the Central Mill in Virginia City produced one thousand pounds of bullion. Each ounce of this bullion is worth \$2 50, or \$7,500 for the run of twenty-four hours. This result was obtained from Gould & Curry ore.

A thorough test of the Whitman coal is now being made at Sutor's mill at Dayton. Considerable improvements are also going on there for the health and accommodation of the hands.

**A WISE PRECAUTION.**—Mr. Almarin B. Paul has taken the precaution to put in a large flume near his big mill, some four or five feet in width, by two and a half or three feet in height, and placed in such a position as to carry all the water of the ravine around the mill. All who were in the Territory last Winter will admit the wisdom of this precaution. There are other places along the canon, says the *Enterprise*, where flumes should be built, otherwise, property may be damaged.

**THE BLOCKADE.**—Up to the first of December 540 vessels, endeavoring to run the blockades, had been captured by the Federal cruisers. Their cargoes alone are valued at \$40,000,000.

**GOING.**—The number of Revolutionary Soldiers on the ion list, January 30th, 1862, was only 30.

**ONE YEAR'S TREASURE EXPORTS.**—The shipments of treasure from San Francisco, during the year just closed, were as follows:

To New York.....	\$26,194,034 93
" England.....	12,950,139 61
" China.....	2,660,755 29
" Japan.....	17,916 00
" Manila.....	65,651 64
" Australia.....	121 10
" East Indies.....	62,414 00
" Panama.....	434,507 79
" Hawaiian Islands.....	3,000 00
" Punta Arenas, C. A.....	10,000 00
" Mexico.....	5,000 00
" Victoria.....	188,221 71
Total.....	\$42,561,761 07

**ACADEMY OF NATURAL SCIENCES.**—The following named gentlemen have been elected officers of the California Academy of Natural Sciences for the ensuing year: President, Colonel Leander Ransom; First Vice President, Dr. J. N. Eckel; Second Vice President, Dr. J. B. Trask; Corresponding Secretary, Dr. Wm. O. Ayers; Recording Secretary, Professor W. H. Brewer; Treasurer, William Heffley; Librarian, Professor T. D. Whitney. Curators—On Mineralogy, Gideon F. Moore; on Botany, Dr. A. Kellogg; on Paleontology, M. S. Cobb; on Conchology, Dr. J. S. Cooper; on Entomology, Dr. H. Behr.

**MORE COPPER.**—The *Calaveras Chronicle* says that a new lead of copper has recently been struck near Campo Seco, on ground belonging to Mr. Chamberlain. Many rich veins of copper are already known to exist, several of which are now being worked in the vicinity of this discovery, and expectations are confident that the raising and shipping of copper ore will soon render Campo Seco one of the most flourishing mining camps in that region.

**ANOTHER.**—A new Copper mine has recently been struck near Hog Hill, about four miles from Copperopolis. It was discovered by Capt. Nulty & Co. It is a rich vein of sulphuret of copper and, it is said, the lucky finders have refused \$150,000 for their discovery.

**COPPER STOCK.**—One share in the Consolidated Copper Mining Co. was sold yesterday for \$100. The company was organized some two weeks ago, consisting of thirty shares, each representing 100 feet on the ledge, and the stockholders were at no other expense except to stake out and record the claims. The stock may therefore be said to have advanced from nothing to \$100 a share. [*Nevada Democrat*, Jan. 3d.]

**THE ACTON COPPER MINE.**—This mine, to which we alluded last week, has made its October report, which shows an average yield of 15 per cent.—a gain of 3 per cent. on its previous average. It is located in Canada about 50 miles from Montreal, and has recently been purchased by a Company of Boston capitalists. The ore is shipped to Boston via Portland, for working. The yield for October was 388 tons of copper. About 250 men are employed at the mine.

**THE ULSTER (N. Y.) LEAD MINE.** recently discovered, had been opened, at last accounts, only ten feet deep; yet it is thought by experienced miners that the developments already made are such as to warrant the conclusion that it will prove the most extensive and valuable lead mine in the world. The ore is of fine quality, and the facilities for working the mine and transporting the mineral to a market are very superior.

**COAL IN VICTORIA.**—A wealthy English Company has sent out an experienced mining and civil engineer to explore the island for coal. Should it be found of proper quality and quantity, the Company will immediately invest a large amount of capital in the enterprise. The engineer has already arrived at Victoria.

**ANOTHER ANXIETY.**—British capitalists express great anxiety in consequence of the rapid drain of specie from England to India. The payments for Indian cotton are becoming very heavy, the last steamer for Bombay having taken out about \$5,000,000—the largest amount ever dispatched to one port, although an equal sum has been sent before to the East in a single vessel for distribution among several markets.

**SUBSCRIBE.**—Are you a miner and not a subscriber to the *MINING AND SCIENTIFIC PRESS*? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the *Press*, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the *MINING AND SCIENTIFIC PRESS*. We invite all to send us their names and four dollars, or two dollars for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so far meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the *Press* for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short period.

**CORAL AT THE FARALLONES.**—Coral was discovered a few days since on the Farallones, by a party connected with the Coast Survey. The color is red, and the branches are rather coarse in form and size. It was in the progress of formation, for the coral animals inside were still alive. Live coral, it is said is not found so far north in any other part of the world by several hundred miles. Similar coral has been found in Monterey Bay.

**NOVEL INVENTION.**—A Federal army officer has invented a method of disabling artillery when it becomes necessary to abandon it to the enemy, which is said to be most effectual, and most entirely supersedes the present method of "spiking." Any effort on the part of the enemy to remove the disabled instrument will instantly burst the gun, and scatter destruction among all who may be near at the time. Such an invention must give the party holding it quite an advantage over his opponent, so long as the secret is kept within the knowledge of one party only.

**LAND MONITORS.**—Mr. Redstone of Indianapolis proposes to build for Government nine "Land Monitors," or engines of war, to cost \$900 a piece, to weigh 1,800 pounds each, 25-horse engine, and all, with coal, water, ammunition, knives, &c., included in the above weight. Each to be handled by two men; to discharge from each 10,000 shots in half an hour; to be capable of running 20 miles an hour over any grade less than 45 degrees; to be perfectly manageable in turning, climbing or descending; to clear more obstructions from artillery roads than 500 men; to reap the rebels clear by divisions; to resist canister, grape, and small shot.

**RAILROADS IN THE SOUTH.**—The want of machine shops to replace rolling stock along the Southern railroads as fast as it is worn out and disabled is beginning to be seriously felt. The tracks are kept in repair by the rails which have been taken up along the border and carried South. What few repair shops they have are kept constantly at work and mechanics in this branch of business are highly prized. If the war continues much longer a majority of the Southern railroads must stop running entirely.

We would call the attention of our readers to the Stock Report which we give from week to week in the columns of the *Press*. This report is very full and carefully made up from the most authentic sources, embracing all attainable transactions both in this city and in Washoe. Our report, for this city, embraces a full statement of the sales at the Stock Board—each day's operations being presented in a tabular form. We also re-produce the substance of the several Mining Circulars issued in this city. In order to give each week's transactions, full and complete, we have changed our publication day from Saturday to Monday. We intend to make each number of the *Press* a full epitome of the mining intelligence of the previous week, and add thereto such matters of general interest and information as shall be thought useful and advantageous to the miner, and the mechanic.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

**RED, WHITE AND BLUE G. & S. M. Co.**—An assessment of 125 cents per share, payable on or before Feb. 1st, at office, cor. Pine and Montgomery Sts.

An assessment of \$35 per share was levied Jan. 6, payable immediately, at office, No. 712 Montgomery street.

**Luna Copper Mining Company.**—The annual meeting of Stockholders for the election of officers, will be held, Jan. 23, at office, No. 502 Montgomery street.

**Live Oak Copper Co.**—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

**Gold Silver Mining Co.**—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

**Cedar Hill Tunnel and Mining Co.**—An adjourned meeting of Stockholders will be held, Jan. 15, at Office, Room 5, over Parrot's Bank.

**Mina Prieta S. M. Co.**—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

**Savage Mining Co.**—The Annual Meeting of the Stockholders of this Co. will be held at Office, 712, Montgomery St. Jan. 13.

**Union G. & S. M. Co.**—The regular quarterly Meeting will be held, at Office, 410, Montgomery St., Jan. 19.

**The Madison G. & S. M. Co.** advertise names of parties who are in arrears for assessments, and give notice that their stock will be sold on the 29th day of Jan. unless said assessments are previously paid.

**Franco-Americano S. M. Co.**—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Gann, *President* and A. S. Gould, *Secretary*. The office of this Company has been removed to No. 523, Clay street, Room No. 2.

**Sierra Nevada S. M. Co.**—The annual meeting for the election of Trustees will be held at office No. 40, Montgomery Street, Jan. 12th.

**Lucerne Mining Co.**—The Annual Meeting for the election of Trustees will be held at Office 114, Battery St., Jan. 12th.

**Central Silver Mining Co.**—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

**Lady Bryan G. & S. M. Co.**—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

**Desert Mining Co.**—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

**Wide West Mining Co.**—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

**Roose River Mining Co.**—Ten cents per share has been levied upon the capital stock of this Company, payable Jan. 14th.

**San Francisco S. M. Co.** have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

**Pacific Quicksilver Mining Co.**—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

**Keystone Copper Mining Co.** advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

**Mammoth Ledge Mining Co.** give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

**Hale and Norcross S. M. Co.** have levied an assessment of \$5 per share payable on or before Jan. 26th.

**CHARLES CANY MINING Co.**—An assessment of \$1.50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING Co.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOTI SILVER MINING Co.**—An assessment of four dollars per share was levied on this Company, Dec. 11, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**MEREDITH GOLD & SILVER MINING Co.**—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**BULLION G. & S. M. Co.**—The Stockholders are notified

that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**NORTON G. & S. M. Co.**—An assessment of two dollars per share was levied Nov. 25, payable on or before Dec. 30, 1862, at office 522 Montgomery St.

**Dios Padre G. & S. M. Co.**—An assessment of three dollars per share was levied, Nov. 29th, payable on or before Jan. 1st, 1863, at office 502 Montgomery St.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

**VIRBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

**EL DORADO G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 1st, and payable at office, on N. E. cor. of California and Montgomery Sts., or to Superintendent in Virginia City.

Another assessment of one dollar per share was levied Dec. 22, payable as above.

**IOWA MINING Co.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING Co.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**HAWLEY MINING Co.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING Co.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days—At the expiration of which time delinquent stock will be sold.

**NAPOLEON COPPER MINING Co.**—The first annual meeting of this Company will be held at office N. E. corner of Sacramento and Montgomery Sts., on Monday, January 12th 1863, at 8 P. M.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

## WASHOE MINING NOTICES.

**Baltic Mining Co.**—Notice is given of an adjourned sale of shares in this Company, to take place on the ground, Jan. 31st.

**Progress G. & S. M. Co.**—An assessment of 20 cents per foot was levied, Dec. 27, 1862, payable forthwith.

**Sweezy Co.**—Washington Ledge.—An assessment of \$10,000 being \$5½ per foot—was levied on the stock of this Company, Dec. 28, payable at the Secretary's Office, Medan Building.

**MINERS' MEETING.**—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1863, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

**Caution.**—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Entente prise.)

**Ashland Co.**—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

**Eldorado G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

**La-Plata Oro Co.**—Gold Hill District.—An assessment of two dollars per share was levied, Dec. 26, payable at once, at Office of the Secretary, Court-house Building, Virginia City.

**Texas Co.**—Tennessee Ledge.—An assessment of 25 cts. per foot was levied, Dec. 22, payable on or before Jan. 21, 1863.

The Regular meeting of the Company for election of officers, will be held at the Comet Saloon, Virginia City, on Saturday, Jan. 21.

The North American Co., Gold Hill, will sell at auction,

Jan. 31, stock of shareholders delinquent in payment of assessments.

**Grass Valley Co.**—A meeting of this Co. will be held the "Medan," in Virginia City, on Thursday, Jan. 15.

**ASHLAND G. & S. M. Co.**—An assessment of fifty cents per share was levied, Dec. 10, payable at the office of M. J. Power, Sec., B. St.

**NORMAN SILVER MINING Co.**—An assessment of One Dollar per share was levied, Nov. 19th, payable on or before Dec. 31st, to the Superintendent in Virginia City, or at the office, No. 40, Montgomery Street, San Francisco.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

**THE SWEENEY Co.** Gold Hill, give notice that Paltic Company have wrongfully claimed and worked their ground since July, 1860.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Michel.

**COLEDONIA TUNNEL AND MINING Co.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK Co.** lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Bach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

**LA CROSSE MINING Co.**—An assessment of \$1.25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

**HAWK EYE SILVER MINING Co.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**MOHEGAN Co.** Cedar Hill.—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 2d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LODE COMPANY**, give notice that they claim a superior title to the Johnson Co. claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder.

## MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**THIRD YEAR! VOLUME VI.—NEW SERIES!**

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information, concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2.00. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

### EWER & SMITH, Publishers,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY ..... JANUARY 12, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Federal Building, Room 24, corner of Battery and Washington streets San Francisco, Cal., at Fifty Cents per month, or \$1 per annum, in advance. Advertisements, Fifty Cents per line. A liberal discount made to quarterly advertisers.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING. Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## COPPER MINING.

In an article under the above head in our last issue, we stated that copper ores of less value than 20 per cent. were regarded, in this market, as unprofitable for shipment. We have since learned from parties largely interested in copper mining, that contracts are now being made for shipment of as low a grade as 12 per cent. One contract involving the delivery of several thousand tons has recently been made in this city by the Napoleon Copper Mining Co.—based upon that per centage and upwards. According to the reports of competent judges, whose opinion are founded upon reliable assays, the general average of the unassayed ore, as it comes from the principal mines of Calaveras, will exceed the figure named: very little, if any being taken out which falls below 8, instead of 5 per cent. as we stated last week.

The opinion generally obtains that all below 20 per cent. is valueless in this market, and we had intended to show in the present issue, by reliable data, that such could not be the fact. The information furnished us, as above, renders such an exposition unnecessary, and we can now assure miners that they can obtain favorable advances in this city on ore rating as low as 12 per cent.

The contract of the Napoleon Co., of Calaveras County, is for a term of three years, the contractor, a large capitalist of New York, taking all ore from 12 per cent. upwards. The delivery is made at the ship's tackle in this city, payable in gold coin, and the assay is to be made here. Shipping merchants here, anxious for return freights to New York, are willing to advance say 50 per cent. on 15 per cent. ore, basing the price on the specie value in New York or Boston. The currency value is \$5 75 to \$6, to the one per cent of the assay which, on 15 per cent ore, is from \$86 to \$90 per ton. It is understood that these same parties have written to their correspondents East, for further advices, and that, in a short time they hope to be able to advance on all ore assaying 10 per cent. and upwards. Our readers will recollect that Currency now rates 35 per cent less than Specie.

Boston, New York, and Swansea (Wales) are now competing for our ore. Baltimore will soon make a fourth bidder.

To show the profitable character of copper mining we again refer to the Napoleon Company:—

Cost of taking out one ton of 22 per cent ore.....	\$ 3 00
Sacking, teaming, freight, drayage, etc .....	12 00
	\$15 00
Sale of one ton of ore in San Fran. for gold \$66 00	

Net profit .....\$51 00

Again, the company above named have been in operation only seventy days; yet they have erected steam works, machine shops, houses for miners, superintendents' offices, etc., and all without levying any assessment. The ore sold having paid all expenses, with the prospect of an early dividend.

According to present indications, copper veins are quite as generally diffused throughout the mountains of California

as gold bearing veins, and wherever found, the former are far more profitable and reliable than the latter.

When the special attention of capitalists was first directed to the Copper mines of Cornwall and Devon, it was the opinion of scientific men and all those who examined into the matter, that the "lodes" as they were called, existed only to a limited extent both in territory and numbers. Indeed it was not until the commencement of the present century that the contrary opinion began to prevail, and up to 1825 only 188 companies were engaged in this business. This number had increased in 1855 (30 years afterward) to 633. This result, it should be remembered, is confined almost exclusively to a territory not much larger than the single County of Calaveras, and the yield from which, in copper alone, exceeds at the present time over \$5,000,000 in value, annually—and that too, derived from a class of ore that rates at the very low grade of only 6 1/4 per cent!

All known facts go to show that the copper mines of California are quite as reliable in their depth and extent as those of England. In the latter country numbers of copper mines are now worked to a depth of from 1,000 to 1,500 feet, and some have been traced, in their linear extent, five or six miles. The heaviest class of steam engines are employed in draining some of these mines. In the "Consolidated Mines," for example, three engines are employed for that sole purpose, the largest of which has a cylinder of 90 inch s, inside diameter, with a stroke of 9 feet 11 inches. It is rated at 310-horse power. This mine alone, from 1815 to 1856 yielded copper to the value of nearly \$15,000,000.

From the above data, it will not require any very great stretch of the imagination to place the value of the copper interest of California, within the next decade, nearly upon a par with that of gold at the present time. Within one year we shall probably be prepared to smelt our own ores and thus vastly increase the value to the state of a given yield of ore over that realized at present. Smelting works will no doubt be erected, at convenient points for the delivery of ore and procurement of coal, as fast as the mines are developed. Statistics show that even with the large increase anticipated, there need be no fear that the supply will exceed the demand to a degree which will materially affect the price. The consumption of copper is rapidly increasing, and the production has never yet been equal to the demand. England, notwithstanding the constant and rapidly increasing yield of our mines, is a large buyer. Her imports for 1851 were, in round numbers, 48,000 tons; in 1858, the latest date we have at hand, they were 76,000—an increase of about 60 per cent. in four years. Copper may henceforth be set down as one of the staple productions of California.

## MR. LATHAM'S MINING BILL.

The Washington correspondent of the *Alt.* writes as follows in reference to the Mining Bill recently introduced into the Senate by Mr. Latham:

"The bill of Senator Latham, for the development of the mineral resources of California and the Territories, directs the Commissioner of the Land Office to continue his investigations in relation to the mineral wealth of the country, by means of survey, etc., and authorizes explorations, practical and scientific experiments, the collection of specimens, new improvements in assaying metals, experimental test of value, etc.

If the Commissioner is not more successful in collecting reliable data in the future, than, judging from his late report, he has been in the past, the country will derive very little benefit from his investigations."

QUARTZ REDUCTION IN SAN FRANCISCO—The Pacific Metallurgical Works, in this city, during the past week, have reduced two tons of ore from the claims of the Sacramento Company, on Cedar Hill, Virginia City, the product of which was \$1,113 65 in gold, and \$40 57 in silver.

They also reduced two tons of rock from the Wide West lead, Esme alda, from which they took \$1,900 in gold and silver.

PARTIES interested in Washoe will find some pieces of rock, at the office of the Jewel Gold and Silver Mining Co., No. 612, Merch on street, which are worth looking at, and which the Secretary, Mr. Armstrong, will take pleasure in submitting to their inspection.

## Report of the Land Commissioner on the California Mines.

The report of the Land Commissioner to the Secretary of the Interior, so far as it relates to the mining interest of this Coast, betrays a lamentable lack of information in an Officer of the Government, whose duty it is to collect valuable information for his particular bureau, upon which Congress is expected to base legislative action. The Commissioner indulges in a class of estimates with regard to the mines, most extravagant, and so loose as to be almost utterly without foundation; and upon such fancies proceeds to demonstrate that an immense revenue may be derived therefrom in aid of the National Treasury. "This year," he says, "they should yield \$10,000,000." After assuming that the national debt, on the 1st of July next will be \$778,000,000, the Commissioner says:—

"A tax of some 8 per cent. on the whole yield of the mines would, upon the maturity of a proper mining system, and when the same shall eventually go into full operation, pay off this interest, enable the Government to reduce by at least two-thirds the existing direct tax, and from the residue and imposts have an annual income sufficient to support the Government and provide a fund for the gradual extinction of the public debt and restore the currency to a metallic basis."

The above estimates are based upon the supposition that the mines of the Pacific Coast will yield \$100,000,000 the present year and that that sum will soon increase to three and four times that amount! "The product of Salm n River Mines," he says "has been estimated at, \$20,000,000 for the present year"!!

Such estimates, outside of the Secretary's otherwise valuable report, could scarcely be found in any other documents than those of the purest Munchausen school.

Another notable example of the inexcusable looseness of the Commissioner's assumptions and estimates may be found in the following quotations from his Report:—

The usual size of a quartz claim in the mining region is 100 feet on the line of the lode or vein, and 100 feet on each side, equal to an area of 20,000 square feet; or, say, 1,200 claims to the square mile. Allow that at only one-hundredth part of the mountain surface is occupied by paying leads or veins, there will be space for 3,600,000. But Governor Evans of Colorado estimates the already discovered gold bearing region in that Territory as affording ample room for 8,000,000 claims, and states that new discoveries are daily increasing this area.

A glance at the map is sufficient to show that the mineral region of Colorado occupies less than one-sixth of the whole extent under consideration; but assume it to be one-sixth, there will be ample extent on this basis for 4,800,000 claims, which, if worked, would give employment to 20,000,000 of men. Quartz that yields \$12 per ton will pay in favorable localities \* \* \* Some of the recent discoveries are estimated as high as \$20,000 per ton, but these have not yet been worked.

It seems scarcely possible that such estimates and assumptions, as we have quoted above could find their way into so grave a document as the Report of a leading Department of State. We must certainly suppose that the Honorable Commissioner could never have obtained his information from any member of the California Delegation in Congress. From our personal knowledge of the watchfulness and intelligence of our energetic mining member, Mr. Sargent, we feel quite confident that this report will be so thoroughly "ventilated" on the floor of the House, that the members and their constituency will promptly abandon all hope (should any have been engendered by the Commissioner's flourish over our fabulous wealth) of any such relief from general taxation, as is shadowed forth in the remarkable document under consideration.

The Commissioner gravely and unqualifiedly assumes that the yield of the current year will reach \$100,000,000. In another column we have given an accurate report of the shipments of treasure for the year ending Jan. 1st, 1863, which foots up, all told, only \$42,561,761. This shipment, it should be recollected, has been made under the unusual stimulus of an extraordinary demand for gold at the East, and the existing apprehensions of serious business derangements, which have had a tendency to remove much timid capital, for foreign investment. There is not one particle of evidence which would lead to the probability of a single dollar's increase of next year's shipments, from this except the possible additional yield of one and perhaps two million from Nevada Territory. The Secretary's estimate

All intelligent persons, we believe without exception, who have made themselves acquainted with the mining interests of California by personal observation, are agreed in the opinion that no system of laws can be devised which will more rapidly develop the mines than that which now obtains. With regard to revenue, unless Government despoils miners of their possessory interests, and sells the same, it cannot hope to realize much except from a limited portion of the best paying mines. The proportion of the mining yield which might thus be reached would not much, if any, exceed one-fifth of the entire yield. The true and only practicable policy for Government to pursue is to be satisfied with the application of the increase tax to such mines as it will reach, and look for the chief benefit to be derived, to the commercial advantages which will accrue from the increase of a substantial circulating medium. The gold which our miners are taking out is rapidly made to create values which at once form permanent material for legitimate taxation. Let Government have a care that it does not kill the goose that is laying its golden eggs with such promptness and regularity as to make it the envy and astonishment of the world. We would close by referring the reader to the pertinent and practical remarks of Governor Stanford in his late message under the head of Mines and Mining.

On Friday even'g, November 21st., an explosion, under very similar circumstances, took place, at Taylor's Saloon, corner of Broadway and Franklin streets, New York. People using gas should watch and promptly stop any leakage, in their premises, else accident may happen.

The Gould & Currier is also steadily improving closing the week at \$200 advance. A settlement was made on Tuesday with regard to the 118 feet at the South end of the mine, in dispute with the Savage Company. The G. & C. agree to pay for the same \$24,000—half down, balance in 60 days. Dividends for January on 220 feet have been sold at from 81 to 82½ dollars per foot. Sales of 131 feet are reported; buyers more plenty than sellers. The mill, which has been stopped for several days to finish up some part of the works, is about ready to start again.

The Savage is still upward in its tendency—having advanced \$100 the past week. Stock in demand. This mine is being placed in working order with every possible dispatch, and it is believed that within 60 days, ore for

Silver Hill has also advanced \$6.

Ophir—6 shares at \$2.050 per foot; 24 at \$2.075; 36 at \$2,300; 60 at \$2,400; 120 at \$2,525, 30 days; 120 at \$2,500; 36 at \$2,600, 24 at \$2,000 78 at \$2,075; 24 at \$2,100; 42 at \$2,800; 24 at \$2,500 and 126 at \$2,550.

Gould & Curry—20 at \$2,800; 20 at \$2,825; 16 at \$2,900, Feb. 1st; 40 at \$2,900; 4 at \$3,000, 1st February; 40 at \$3,000.

Chollar—20 at \$377; 20 at \$375; 20 at 400; 40 at \$390; 20 at \$400; 28 at \$405.

Savage—20 \$765; 10 at \$800; 20 at \$800.

Potosi—20 shares at \$110.

Sierra Nevada—10 at \$62½; 10 at \$63; 15 at \$61; 20 at \$64; 10 at \$70.

Burning Moscow—20 at \$60; 30 at \$61; 5 at 62½; 10 at \$64; 10 at \$60 62 at \$65; 40 at \$75, 60 days.

Charles Caney—10 at \$19.

Meredith—32 shares at \$22; 82 at 21½.

Central—60 at \$1,700 on New York account.

Hale & Norcross—20 at \$500; 13 at \$525; 13 at \$525; 5 at \$535.

Iowa—10 at \$130; 10 at \$125; 10 at \$120.

Hazel Green—50 at \$1½; 20 at \$1¾.

Wide West—40 shares at \$300; 100 at \$300; 10 at \$325; 16 at \$320; 26 at \$320; 10 at \$340; 10 at \$367½; 15 at \$355.  
Antelope—10 at \$100; 10 at \$150; 10 at \$150; 10 at \$142½; 10 at \$155; 25 at \$130; 10 at \$146; 10 at \$150; 10 at \$152½.  
Main Esmeralda—15 at 50 dollars.  
Real-del Monte—50 at 20 dollars.  
Utah—20 at 40 dollars.  
Fifty feet of the January dividend of Gould & Curry sold for \$81½ per ft  
Ten feet “ “ “ “ “ “ “ “ \$82½

The Josephine has been but little enquired for the past week. It changed hands at the Stock Board from 10 to 13 dollars,—Holders asking \$17 to \$20  
Coco—Not quoted, \$25 asked.  
Willow Springs—held at \$40 Sold at \$10.

Mina Prieta finds no recent buyers, but is held at \$140.  
Dios Padre is quoted at from 32 to 36½ dollars.

The Enterprise thinks the favorable appearance of the Stock market, at the present time, is a good augury of the future favorable effects of the Incorporation Law.

Considerable Humboldt stock continues in market, but aside from the Mars, Cuba, Sheba, South Extension of the Sheba, and three or four other claims, there is little or no inquiry in that direction. There is also a large quantity of Eagle and Silver Mountain district stock, but entirely without buyers.

## Wheeler's Amalgamator and Separator.

On the first page of to-day's issue we give an illustration of a new machine, recently invented by Mr. Zenas Wheeler of this city, designed especially for separating and collecting the amalgam from the ores of gold and silver, after the ores have been thoroughly reduced by the most severe process of trituration in the amalgamating pans, represented on this page. The machine first above alluded to is called a "Separator." The amalgamating pans were first illustrated and described by us in our issue of December 29th, 1862, and now reproduced on this page. They are fashioned, in their general construction, very much after the usual plan of this class of machines, when used with a steam chamber for the purpose of heating the pulp. Its internal arrangements present important improvements over most other pans that we have examined, and which are readily apparent to any practical miner who will carefully examine the illustrations herewith presented.

The Separator is something entirely new and must commend itself to every quartz miner. Heretofore the "cleaning up" has been made direct from the pan, which necessarily caused much delay, and is, at best, but imperfectly performed. One Separator is designed to be used with two or three pans.

After the ore has been operated upon in the pans for a sufficient length of time to reduce it to an impalpable powder and thoroughly amalgamate all the mineral, the entire mass is drawn off into the Separator. The bottom of the pan is slightly concave, with a small bowl-like depression in the center, and entirely below the reach of the stirrers. Into this bowl the amalgam, as fast as it settles, finds its way, and when once there, is at perfect rest until the machine is cleaned up. These machines have been for several months in use at the Zephyr Flat Mill, in Carson Valley, where both the Amalgamator and Separator have proved themselves superior to any other apparatus in use there. By this machine the labor of cleaning up is greatly reduced and simplified. By the use of the Separator, the pans are never required to be stopped except to be recharged or have the dies renewed.

Perhaps the best test of the value of these machines may be adduced from the fact that no perceptible loss of quicksilver has yet been noticed, from the working of this machine, which cannot be said of any other in use. All miners who have examined these machines speak most favorably of them. They may be seen in operation every day at the Miners Foundry, on First street in this city.

The issue of the Press containing the illustrated description of Wheeler's amalgamator having been exhausted, and having had numerous calls for the same which we have been unable to fill, we re-produce the illustrations, to-day, in connection with the "separator," which appears upon our first page. See editorial notice in another column.

The upper of the three accompanying engravings represent a perspective view of a new amalgamator recently patented by Mr. Zenas Wheeler, of this city, as it appears when at work.

The engraving upon the left represents the amalgamator opened. In the bottom of the pan M are seen the dies L L L. The inclined spiral ledges K K on the side of the pan are designed to create an upward current of the pulp by which it is forced again to the centre of the top of the muller, and thence through a proper opening, underneath the same, for re-grinding. This current is kept up, so long as the machinery is in motion, and by thus constantly chan-

ging the particles, every portion of the ore is soon reduced to an impalpable powder, and in much less time than by the ordinary mullers, where no such current is established. The letters G G G represent the muller raised from its place in the bottom of the pan with the face turned toward the observer, exhibiting a set of shoes, which, like those in the bottom of the pan, are also moveable, and may be readily replaced when worn out. The letters I I represent supports for the stationary wings D D D, as represented in the engraving upon the right. The office of these wings is to aid in forcing the current of ore to the center of the pans as described above.

A, in the engraving upon the right represents the support of the inner end of the wings which are adjustable by the screw H upon the top of the shaft C. B is the driver, which carries the muller E. G G represent an end view of the shoes on the face of the muller. F F are inclined spiral threads on the outer edge of the muller, which in connection with the spiral ledges on the pan create the upward current as before described.

The steam pipes represented upon the left of the upper fig-

ure are designed—the lower one to carry steam to the steam chamber, beneath the bottom of the pan for heating the pulp, and the upper one to convey the steam directly to the pulp in the pan.

## California Made Pianos and Musical Artists.

Agreeably to an invitation we repaired to Tucker's Academy, a few days since, where it was announced that a Musical *Matinee* would take place. Although the day was inclement, the Hall was filled to overflowing. The Academy Rooms, however, we are pained to say, are far from being suitable for chaste musical performances. The stage was occupied by two grand Concert Instruments, recently manufactured by the celebrated Piano maker, J. Zech, on California street, and are the finest ever made on this Coast. The quality of their tone is far better and more agreeable than those imported. Their external appearance is chaste and exquisite. Zech's Pianos have become popular on this Coast, and he cannot be excelled in the manufacture of this instrument by the most renowned makers in Europe or the Atlantic States.

The *Matinee* was produced with great effect by the following artists:—Pianists, Messrs Rodo Sipp, Staderman, Evans and Shultz; Flutist, Capity; Violincello, Stochr, and our esteemed friend, Ehrich, Violin *Primo*.

The selections were from the greatest masters. We have neither time nor space to offer comments upon the several productions performed, but would remark that they were rendered in a style and spirit truly artistic and, as such, vociferously applauded. The inclemency of the weather has had effect generally upon string instruments, which was partly the cause of the exclusion of DeBuriot's Concerto as announced, and which would have proved the gem of the day. It is rumored that a subscription Quartette of string instruments will soon be inaugurated here when only Mozart's, Beethoven's, Mendelssohn's and other celebrated productions will be given. We wish it a speedy success. It will have our aid. J. S.

THE NEW QUARTZ MILL, a working model of which was recently in operation near the corner of Third and Townsend streets has since that time been much improved by the patentee, Mr. Pond, and a new one of larger dimensions is

now at the Miner's Foundry, nearly completed. It will be in operation in a few days. Notice of the same will be given in the morning papers. Illustrative engravings of the same are now being prepared which we hope to lay before our readers next week. This is one of the most original Quartz Mill Inventions we have seen for a long time, and bids fair to prove a most complete success.

RUDOLPH SIPP—PIANIST AND COMPOSER.—We have been favored with the acquaintance of the gentleman whose name heads this notice. In an issue of the *Leipzig Illustrated Journal* dated April 8, '57 we find a high compliment paid him as artist of merit, at the same time announcing his departure for South America. Mr. Sipp is our Countryman, as well as an scholar and a gentleman and we bespeak for him a long and continued success in California. His musical compositions rank among the best.

A CONTRACT.—Horatio Lombard, of Chicago, has obtained from the War Department a contract to follow the army of the Potomac and collect the hides and tallow of all the cattle slaughtered for the use of the army. There was a good deal of competition, there being over forty bidders. Mr. Lombard's was \$7 80 per head, and was accepted.

Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent Right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

PACIFIC PATENT AGENCY, J. SILVERSMITH, SOLICITOR.

PACIFIC MAIL STEAMSHIP COMPANY'S line to PANAMA connecting via the Panama Railroad with the steamers of the Atlantic and Pacific Steamship Company, at Aspinwall.

FOR PANAMA,

The following Steamships will be dispatched in the month of January, 1863.

Jan. 10th—St. LOUIS, Captain E. S. Farnsworth,

21st—GOLDEN AGE, W. H. Hudson, Commander.

Will leave Folson Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with steamships for N. York

For freight or passage, apply to

LATEST IMPROVEMENT

In LADIES' BUCKLES.

MR. REICHEL, RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address,

FREDERIK REICHEL,

Manufacturing Jeweler, 620 Merchant street, San Francisco.

sep11

REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL WORKS is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent, 318 California street, near Sansome, up stairs.

my30

WRIGHT'S PICKS.

WRIGHT'S PUNCH PICK

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. Pick Eyes of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 511 Market street, Opposite Battery, San Francisco.

Je20

LABOR-SAVING

Rock Drilling Machines.

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRY-men. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

HAND, HORSE, AND

STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to WM. W. DUNN, Fremont street, bet. Market and Mission, San Francisco.

A. KOHLER, Agent.

Dr. Van Zandt,

Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity! Made Subservient for the Cure of all Nervous and Spinal Diseases.

THAT THIS PRINCIPLE, successfully applied to diseased states of the system, is to prove the great sought for necessity, long wanted by physicians, to all their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equi-librium of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a want of forces going on in our system? This needs correcting, and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

Awaken the Magnetic Life Within Us,

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complaints which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wonted tonicity of the body; awaken the melancholic and despondings; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exerting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or euboeitic habit of body,

None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon in our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29-3m

FREDERICK KESMODEL,

Cutler and Surgical Instrument Maker

517 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL, Inventor and Patentee.

## The Occidental Hotel

IS NOW

Open for the Reception of Guests.

THIS HOUSE HAS ALL THE MODERN IMPROVEMENTS, and will be conducted equal in every respect to the first class houses of the Atlantic cities.

The spacious READING AND EXCHANGE ROOMS, have been fitted up with special reference to the comfort and convenience of the public generally, having a news stand and large Cabinet for minerals; also, a Branch Telegraph Office connecting with all the lines throughout the country.

LEWIS LELAND & CO.,  
Proprietors.  
San Francisco, Jan. 1st, 1863.

## To Mill Owners.

WANTED, by a person fully competent to the position, a situation as Mining Superintendent in a Gold or Copper Mine. The Applicant was engaged for about eight years as Superintendent of Copper Mining Works in Cornwall, and has acted in the same capacity in Gold Mines in this State for the past seven years. He has had much experience in Cornwall, as an Assayer, a Machinist, a Draughtsman, a Surveyor and an Assessor of Copper Ore. He can give ample testimonies as to his capacity for the position he seeks.  
Apply at this Office.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cut mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to  
HARVEY S. BROWN,  
No. 19 Nagle's Building.

Lithographic Maps can be seen and had at the above named office, no 18 6mo

## V. SQUARZA'S

## Punch Factory.

MR. SQUARZA IS FAVORABLY known in this State for his Anti-Divorce Liquors and similar productions, as manufactured by him. We may mention that Mr. Squarza is an aid in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

And CHAMPAGNES of all brands.

SAN FRANCISCO, MONDAY, JANUARY 19, 1863.

NO. 12.

#### PROSPECTING FOR COPPER.

As the attention of prospectors, in California, at this time, appears to be very generally directed to Copper, as a present speciality, we have thought it might be opportune to give a few hints which may be of service in such researches.

The ores of copper are quite numerous and present a great diversity of appearance; yet they are all very readily distinguished by certain chemical re-agents, from non-cupreous ores. The presence of copper in any ore, even to as low a per centage as a fraction of only one per cent, may be readily ascertained by first calcining and then finely pulverising the ore and subjecting it to a bath of water of ammonia, when, if copper is present, the water will assume a blue tinge, more or less intense, according to the amount of copper in the ore. A teaspoonful of pulverised ore dropped into a two ounce vial two-thirds filled with the above mentioned liquid is about the proper proportions to be employed in the test. Nearly all the ores of copper may be readily distinguished, after a little experience, from the appearance of a greenish tint upon their surface, more or less observable, and sometimes verging upon purple or blue.

The ores of copper are divided, by metallurgists, into 13 different classes, and each class is subdivided into many varieties. The richest of the ordinary ores appear under two general aspects: the first having a metallic luster of copper sed, brass yellow, iron or blackish gray, at times inclining to blue; the second is without metallic appearance, of a reddish color, verging upon purple, blue or green, the last being the most usual tint. The classes of ore most frequently occurring are Native Copper, Sulphuret of Copper, Copper Pyrites, Gray Copper, Sulphate of Copper, Carbonate of Copper and Arseniate of Copper. Native Copper, so far as we have learned, has never been found, to any extent in this State, although it occurs in greater or less abundance in most other copper regions hitherto explored. It is found in greatest abundance in the mines on the Southern shore of Lake Superior. The most common ores of copper are sulphurets and oxides the former being the most abundant.

Sulphuret of Copper occurs in all considerable copper districts, and especially in Cornwall. This is also a class of ore which seems to be very abundant in California. The color of this ore is a blackish lead gray, approaching, at times to tarnished blue or green. It is considered one of the richest ores, and generally occurs in very heavy veins.

Copper Pyrites greatly resembles, in appearance, sulphuret of iron, common in the gold bearing quartz of this State, and will probably prove the most abundant of the copper ores on the Pacific Coast. This with the sulphuret of copper, forms the chief yield of the copper mines of Cornwall. The color of the Pyrites is brass yellow, subject to tarnish, with greenish black streak and uneven fracture.

Copper Pyrites are readily distinguished from iron pyrites, which they greatly resemble, by their inferior hardness; they may be cut with a knife, while iron pyrites will strike fire with steel. A marked difference may also be noticed in the effects of nitric acid upon the two substances. They do not form so rich an ore as sulphurets. The richness of the Pyrites may generally be judged by their color. If they

present a fine yellow hue, and readily yield to the hammer, they may be considered a good ore; but if they are hard and of a pale yellow color, they are mixed iron pyrites, and consequently comparatively barren of copper and constitute a poor quality of ore.

Carbonate of Copper is of a blue or light green color, with pale green streak. It often occurs in beautiful green crystals. It is also known as Malachite. Green Malachite or Green Carbonate of Copper admits of a high polish, like marble, and when obtained in large slabs, is often formed into tables, mantel pieces, etc.

Arseniate of Copper is of various shades of olive Green, and sometimes occurs in beautiful blue crystals. It readily melts before the blow-pipe, throwing off fumes of garlic odor. This ore is but little worked.

Gray Copper ore is of a steel gray color, more or less deep, either bright or dull. The value of this ore is often very materially increased by reason of the silver which it contains. It is generally accompanied, to a greater or less extent with copper pyrites.

Sulphate of Copper (Blue Vitriol), is similar to the artificial salt of the laboratory. The water flowing from mines of this variety of ore is of a blue tint, caused by the solution of this salt. Copper is easily obtained from this water, in a metallic state, by depositing pieces of scrap iron in it.

The ores above named are about all the ores of copper which are worked to any extent. The copper of Lake Superior contains about 3-10ths of one per cent of silver. The copper of this State, mostly if not all, doubtless contains an appreciable quantity of both gold and silver. Of this we shall probably receive more definite knowledge when full returns are received from the ores which have been shipped East for reduction. Many of the mines now being explored for copper; have heretofore been worked for gold, and abandoned because they would not pay. As our miners become familiar with the characteristics of copper ores these mines are being rapidly re-located, and worked for their legitimate yield, which, as a general thing, will be found to be much more profitable and enduring, than any ordinary yield of the more precious mineral, so generally sought for in California. A little science will be found of vast importance to the practical miner everywhere, and especially in California, where the mineral deposits assume such a great variety, and are found in such unprecedented profusion. Our miners according to present indications, will soon become as familiar with copper ores, as they have, for the last ten years, been with gold. We shall, from time to time take occasion to throw out such practical hints as may be deemed for the advantage of those engaged either in prospecting for ores, or raising and reducing them.

SAN FRANCISCO PHYSIOLOGICAL SOCIETY.—Articles of incorporation in favor of the San Francisco Physiological Society were filed on Tuesday last, in the office of the County Clerk. This is a benevolent and scientific association which proposes to cultivate the science of human physiology, and to elevate woman to a standard of physiological knowledge corresponding to the advancement of the age.

#### MINING SUITS IN WASHOE.

The Territorial *Enterprise* of Virginia City speaks as follows of the Mining Suits now in progress or contemplated in that neighborhood: "Lawsuits and the rumors of lawsuits have been the talk of operators and the study of lawyers during the past week. The arguing of the Potosi-Chollar case before the Supreme Court, seems to have suggested scores of opportunities for litigation; and any number of injunctions and ejectments loom up in the future. Like a contagion, however, this condition of affairs must soon die out from the want of subjects, or be dissipated by a purer atmosphere, when the real owners of claims will be all the more secure in their possessions for the ordeal of menace and litigation through which they have passed.

Prominent among the approaching suits mentioned, are—the Sacramento and Meredith; the triangular case of the Baltic, Uncle Sam and Sweezy; the re-opening of the North Potosi and Hale & Norcross suit; the Savage vs. the North Potosi; and more remote, but not less certain, the Rogers and El Dorado squabble. The Sacramento sues, to quiet title, near a dozen mining companies on Cedar Hill; but the suit, it is well understood, is aimed at the Meredith, and will find a hearing some time next month. The second case mentioned gives promise of being long and spirited. The Sweezy first located the ground in dispute, the Uncle Sam re-located it, and the Baltic claims title through a Constable's or Sheriff's sale of the ledge for debt. The Sweezy pleads that the claim was never subject to relocation, the Uncle Sam that it was abandoned by the Sweezy and illegally transferred to the Baltic, and the Baltic that the Sweezy did abandon and the Baltic did acquire possession through the sale referred to. The suit between the North Potosi and Hale & Norcross, won not long since by the latter, need not be explained. The Savage now threatens suit for the remainder of the ledge left the Potosi by the Hale & Norcross verdict. The Potosi will endeavor to prove that the ledge it is now working lies in front of the Savage claim. The most interesting case, perhaps, is that of the Rogers and El Dorado—all the more so, as the ledge in dispute is presumed to be of great value. The Rogers stock has found its way, to a great extent, into the hands of heavy operators, but the El Dorado seems sanguine of its ability to place the Rogers stakes three hundred feet west of the Montour ledge and maintain possession of the expensive works now seen on the contested ground.

The Yellow Jacket has also commenced a suit against the Union, Laboring and Princess Companies, to quiet title.

Capitalists wait with some anxiety the decision of the Supreme Court of the Territory, in the suit of the Chollar Company vs Potosi Company, in the event of reversion of judgment, the Potosi would advance to three times its present rates, and an advance may be reasonably looked for in Chollar stock if the judgment of the lower Court receives confirmation.

The value of the ground now pending in the suit between the Chollar and Potosi Companies is variously estimated at from five hundred to one million of dollars.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

**RED, WHITE AND BLUE G. & S. M. Co.** levied an assessment of 25 cents per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

An assessment of \$35 per share was levied Jan 6, payable immediately, at office, No. 712 Montgomery street.

**Iona Copper Mining Company.**—The annual meeting of Stockholders for the election of officers, will be held, Jan. 23, at office, No. 502, Montgomery street.

**Live Oak Copper Co.**—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

**Coso Silver Mining Co.**—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

**Cedar Hill Tunnel and Mining Co.**—An adjourned meeting of Stockholders will be held, Jan. 15, at Office, Room 5, over Parrot's Bank.

**Mina Prieta S. M. Co.**—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

**Savage Mining Co.**—The Annual Meeting of the Stockholders of this Co. will be held at Office, 712, Montgomery St. Jan. 13.

**Union G. & S. M. Co.**—The regular quarterly Meeting will be held, at Office, 410, Montgomery St., Jan. 19.

**The Madison G. & S. M. Co.** advertise names of parties who are in arrears for assessments, and give notice that their stock will be sold on the 29th day of Jan. unless said assessments are previously paid.

**Franco-Americano S. M. Co.**—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Gaian, *President* and A. S. Gould, *Secretary*.

The office of this Company has been removed to No. 528, Clay street, Room No. 2.

**Sierra Nevada S. M. Co.**—The annual meeting for the election of Trustees will be held at office No. 40, Montgomery Street, Jan. 12th.

**Lucerne Mining Co.**—The Annual Meeting for the election of Trustees will be held at Office 114, Battery St., Jan. 12th.

**Central Silver Mining Co.**—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

**Lady Bryan G. & S. M. Co.**—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

**Desert Mining Co.**—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

**Wide West Mining Co.**—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

**Reese River Mining Co.**—Ten cents per share has been levied upon the capital stock of this Company, payable Jan. 14th.

**San Francisco S. M. Co.** have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

**Pacific Quicksilver Mining Co.**—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

**Keystone Copper Mining Co.** advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

**Mammoth Ledge Mining Co.** give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

**Hale & Norcross S. M. Co.** have levied an assessment of \$5 per share payable on or before Jan. 26th.

**CHARLES CANY MINING Co.**—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING Co.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOMI SILVER MINING Co.**—An assessment of four dollars per share was levied on this Company, Dec. 11, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**MEREDITH GOLD & SILVER MINING Co.**—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**BULLION G. & S. M. Co.**—The Stockholders are notified

that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**NORTON G. & S. M. Co.**—An assessment of two dollars per share was levied Nov. 25, payable on or before Dec. 30th, 1862, at office 522 Montgomery St.

**Dios Padre G. & S. M. Co.**—An assessment of three dollars per share was levied, Nov. 29th, payable on or before Jan. 1st, 1863, at office 502 Montgomery St.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

**VIBBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

**EL DORADO G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 1st, and payable at office, on N. E. cor. of California and Montgomery Sts., or to Superintendent in Virginia City.

Another assessment of one dollar per share was levied Dec. 22, payable as above.

**IOWA MINING Co.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING Co.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**HAWLEY MINING Co.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING Co.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days—At the expiration of which time delinquent Stock will be sold.

**NAPOLEON COPPER MINING Co.**—The first annual meeting of this Company will be held at office N. E. corner of Sacramento and Montgomery Sts., on Monday, January 12th 1863, at 8 P. M.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office; corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

## WASHOE MINING NOTICES.

**Baltic Mining Co.**—Notice is given of an adjourned sale of shares in this Company, to take place on the ground, Jan. 31st.

**Progress G. & S. M. Co.**—An assessment of 20 cents per foot was levied, Dec. 27, 1862, payable forthwith.

**Sweezy Co.**—Washington Ledge.—An assessment of \$10,000 being \$5½ per foot—was levied on the stock of this Company, Dec. 28, payable at the Secretary's Office, Medan Building.

**MINERS' MEETING.**—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1862, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

**Caution.**—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

**Ashland Co.**—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

**Eldorado G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

**La-Plata Oro Co.**—Gold Hill District.—An assessment of two dollars per share was levied, Dec. 26, payable at once, at Office of the Secretary, Court-house Building, Virginia City.

**Texas Co.**—Tennessee Ledge.—An assessment of 25 cts. per foot was levied, Dec. 22, payable on or before Jan. 21, 1863.

The Regular meeting of the Company for election of officers, will be held at the Comet Saloon, Virginia City, on Saturday, Jan. 21.

The North American Co., Gold Hill, will sell at auction,

Jan. 31, stock of shareholders delinquent in payment of assessments.

**Grass Valley Co.**—A meeting of this Co. will be held the "Medan," in Virginia City, on Thursday, Jan. 15.

**ASHLAND G. & S. M. Co.**—An assessment of fifty cents per share was levied, Dec. 10, payable at the office of M. J. Power, Sec., B. St.

**NORMAN SILVER MINING Co.**—An assessment of One Dollar per share was levied, Nov. 19th, payable on or before Dec. 31st, to the Superintendent in Virginia City, or at the office, No. 40, Montgomery Street, San Francisco.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

**THE SWEENEY Co.** Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Michel.

**COLEDONIA TUNNEL AND MINING Co.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK Co.**, lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Bach & Paxton Companies that they are trespassing upon the Chimney Rock Co.'s ground.

**LA CROSSE MINING Co.**—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

**HAWK EYE SILVER MINING Co.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**MOHEGAN Co.** Cedar Hill.—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LOBE COMPANY**, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

## MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**THIRD YEAR! VOLUME VI.—NEW SERIES!**

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers.—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

**EWER & SMITH, Publishers,**

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

# Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY EVENING.....JANUARY 19, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOGRAPHY and ELECTROTYPE, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

In our issue of last week we commented at some length upon the pernicious exaggerations and misstatements which characterize and constitute the late Report of the Land Commissioner to the Secretary of the Interior. That "Report" has been widely circulated by the press of this State, and its "hifalutin" talk placed side by side with the plain facts of our mining growth and production. Nothing could be more cruel. Such balloon like fancies when brought in contact with any reality produces no concussion whatever.

The Commissioner at one time seemed disposed to take Mr. Sargent's excellent advice, to come out to California and see and learn for himself, the nature and condition of our mining interests. We trust he will do so; or at least by another year prove himself to be "a man who reads the papers."

Last week we said "The Commissioner, gravely and unqualifiedly assumes that the yield of the current year will reach \$100,000,000. In another column we have given an accurate report of the shipment of treasure for the year ending Jan. 1st, 1863, which foots up all told only \$42,561,761. This shipment it should be recollected has been made under the unusual stimulus of an extraordinary demand for gold at the East, &c."

Even this does not express the whole truth concerning the product of California. It is an exceedingly slight deviation from the truth to say that all the gold dug in California and all the silver produced in Nevada, quickly comes to San Francisco to be made into bars or coin.

According to the very reliable statistics recently published in the 'Bulletin,' "the receipts of Treasure from the Interior," at San Francisco, during the year 1863, were \$42,539,799. But of this amount \$4,989,921 was coin, and therefore whether the product of this year or not, had been counted once before. The amount uncoined was \$37,549,878, and if from this we deduct the amount which the same paper a few days before stated to be the receipts from Washoe by public conveyance, viz., "about \$5,500,000, we shall arrive at the true yield of this State during the year just passed—\$32,049,878.

In 1853, it was more than \$53,000,000. The mathematical genius of the Commissioner alone can show how long it will take for California to reach his estimate of \$100,000,000, at the same rate of increase.

We need not however go back 8 years. Again we quote from the *Bulletin*, correcting a slip of the pen or type for 1861, in which the receipts from the Northern mines are given as the uncoined treasure and those from the Southern mines as the coined:

Uncoined Treasure Received in San Francisco.

1860.	1861.	1862.
\$37,802,539.	\$35,880,632.	\$37,589,878.

That is, including 5½ millions from Washoe, the receipts of 1862 fall ¼ of a million short of those of 1860, when little or none was received from Washoe.

If this decrease has taken place while the mines are free to all what ought we to expect under any system of taxation whatever?

We believe however that the proposition to tax the mines has received its quietus. Gold at 48 per cent. premium, is the grandest orator addressing the grandest audience in the world—every man in the Union—an orator that will be remembered long after this foolish proposition of taxation has been forever forgotten.

## OUR MINERAL RESOURCES.

The restlessness of the California miner, while, as a general thing it works only disaster to the individual, is exerting a most beneficial effect upon the community at large. It is to this class of our population that the country is mainly indebted for the wonderful development of her mineral resources which has been accomplished within the past three or four years. The Fraser river excitement of 1858 seems to have impressed upon the mind of our mining population the idea that California was not the only portion of our territory, on the Western Slope, which was rich in mineral. Though, to a great extent disappointed in their expectations of the value of the Fraser river mines, the adventurers thither were determined to continue their explorations in other quarters. The result has been a most wonderful development in both the variety and extent of our mineral resources. The new mineral fields developed by these hardy and determined explorers, present an already extensive outlay in Washington Territory, and Oregon, and extend for hundreds of miles along the Eastern Slope of the Sierra Nevada, and far into the interior of the "Great Basin." Large cities and towns have grown up in some of these localities, which, in the marvelousness of their growth, compare favorably with the early cities of California: while the flow of precious metals therefrom forms most important tributaries to the main stream which courses so regularly through the Golden Gate.

The general yield of the placer mines of California is evidently on the wane, and the development of our quartz interest would utterly fail to keep up the monthly shipments to their general average, were it not for the timely supply that is coming to our aid from these new mining districts.

The amount of gold and silver now finding its way to this city from Nevada Territory forms no inconsiderable item in the monthly shipment of treasure to the East; and yet it must be acknowledged by all who have any acquaintance with that region, that the returns as yet are but the small beginnings of the grand total which must soon foot up as the average monthly yield of the Eastern Slope. Patient and careful explorations by experienced miners are still daily enlarging the boundaries of that remarkable mineral region. Far out on the Humboldt, nearly approaching its head waters, within the unexplored borders of Oregon and Washington Territories, the explorers have already pitched their tents and are sending to their friends here and in Washoe the most indubitable evidences of the extraordinary mineral wealth of those distant regions. The evidence is now overwhelming that California forms the mere western edge of a vast mineral field whose area comprises the entire central portion of the North American Continent, and whose natural outlet is through this city.

These extensive developments are the chief causes that have of late years created so much confidence in the increasing growth and prosperity of San Francisco. Just in proportion to the extent of the development of the mineral resources west of the Rocky Mountains, will be the future growth of this metropolis. It is now apparent to even the most casual observer, that the developments and accomplishments of the next decade cannot fail to place San Francisco in the front rank of American cities, while her facilities for acquiring wealth will be without a parallel in the history of the past. Located as we are, apart and at a safe distance from the convulsions, both civil and commercial, of the Atlantic States and Europe, the capitalists of the East are already turning their attention to our mines as a safe and profitable field for investment. Millions of capital from the Atlantic States and Europe are even now at the disposal of agents here for investment. These agents are met everywhere. They are seeking to purchase our copper ore and to invest in our coal mines. They have already made their appearance in the Mining Stock Exchange, and the day is fast approaching when their bids will run up our leading dividend paying Stocks to a figure little dreamed of on Montgomery street to-day.

## COPPER.

New discoveries of copper ores are constantly being reported. The late remarkable developments in Calaveras County, and the promptness with which capitalists are coming forward to encourage operations in this branch of mining, has given a wonderful impulse to this new department of industry. Many that are conversant with the copper developments in the Counties of Calaveras and Mariposa, think that it will not be more than five years ere this new interest will eclipse in value and importance the gold mines of those counties.

Considerable excitement exists in the vicinity of Jackson Amador county, in consequence of new and rich copper discoveries recently made near the Mountain Spring House. The *Dispatch* says the vein is supposed to be the continuation of the Copperopolis and Campo Seco vein, and has been traced for several miles. The Amador *Ledger* says that Dr. Newton's Company were the first to work a copper lead in Amador County, and they are taking out large quantities, for which they receive an advance of \$50 per ton at the mine. Other Companies are being formed, and will soon be at work. The copper range is supposed to be about one mile in width, extending from some place south of Copperopolis, thence through Copperopolis and Campo Seco in Calaveras County, Mountain Springs in Amador County, Michigan Bar and Folsom in Sacramento County, and thence away on up beyond Nevada, in all of which named places copper ore or its indications have been discovered.

J. E. Oliphant has obtained some very fine specimens of copper from a depth of 28 feet below the surface in Montezuma, Tuolumne County, near the Zinc House.

The late discoveries in Nevada County are in progress of development. Another discovery is also reported on McCarty's Ranch, about two miles from Grass Valley. Several discoveries have also been made a short distance below Grass Valley, of which more particular mention will probably soon be made.

Copper has recently been discovered about ten miles from Auburn, and a Company has been formed with the intention of giving it a thorough prospecting. A lead has also been discovered in Green Valley, Placer County, which is reported rich.

Del Norte, Mariposa, Calaveras, Amador, Tuolumne, El Dorado, Nevada and Sacramento Counties are now fairly in the field as copper districts. Developments in other Counties may soon be expected as a necessary result from the attention which is now being turned in that direction.

## TIN.

Tin has been discovered in several localities in this State, and we notice that a Company to be known as the "Orio Gold and Silver Mining Company," was incorporated, in this city, on Wednesday last, to work for tin as well as other valuable metals in Santa Clara County; Daniel Driscoll, A. S. Barclay and C. A. Mathew are the Trustees. The *Herald* in noticing the formation of this Company says: "We have sufficient reasons for believing that the parties composing this Company have a very 'good thing' in the shape of an extensive tin mine, which is situated within a day's drive of this city. It appears that the riches of our glorious State are just beginning to be developed."

## SILVER.

A Los Angeles correspondent of the *Bulletin* gives some wonderful reports of silver discoveries recently made near La Paz. Ophir and Gould & Curry, according to these accounts are entirely eclipsed! It would appear that the apocryphal Indian stories of gold and silver bullets, and nuggets, lying around loose, might yet be proven true. But, as the correspondent remarks if there is any truth in these reports we shall soon hear from them again, in a more definite and reliable manner.

New silver discoveries are still reported in our own vicinity. Reist & Co., proprietors of an extensive quartz mill and a rich vein near Rawhide Ranch, in Tuolumne county, are putting up apparatus for extracting the silver from the ore found in their rock. They have lately ascertained that their rock is nearly as rich in silver as in gold.

According to the Calaveras *Chronicle* of January 3d there was quite an excitement in that place during the latter part of the previous week, caused by the discovery of supposed silver mines in the Blue Mountain Range, some thirty miles east of Mokelumne Hill. The *Chronicle* says:—"The ore assays rich, and quite a number of claims have already been staked off. If the lead proves as good as expected, we

shall have as rich silver lodes in this county as there are in Washoe. The passage of the Corporation Act by the Nevada Territorial Legislature, will induce capitalists to invest in silver leads on this side of the mountains."

The *Mariposa Gazette* pronounces the recently discovered mines in that locality as realities worthy the attention of the community

#### COAL.

It is said that an extensive bed of superior coal has been discovered on Dry Creek, near Folsom. Preparations are being made for its proper development.

#### SULPHUR.

Mr. Wautsman, according to the Territorial *Enterprise* of Virginia City, has brought to that office several specimens of pure sulphur which had been taken from a small mountain of that material, situated about twenty miles west of Unionville. The *Enterprise* adds:—"That locality may be in close proximity to the lake which burneth with fire and brimstone, and it may not—yet we are of the opinion that this item will change the destination of a good many moderate Christians who are now preparing to emigrate to Humboldt. However, it will give the regulars a better chance than they generally have in mining regions."

#### THE "DIMES" AND "WIDE WEST" CONTROVERSY.

Some little excitement has recently been created in Esmeralda mining circles, by reason of an injunction suit brought by the "Dimes" Company against the "Wide West," the former holding the extension of the latter. The facts in the case we believe are substantially as follows:—The "Wide West" and "Johnson Co.," now consolidated, own a controlling interest in the "Dimes" Company; the stock so held standing in the name of T. W. Ly'e. The minority of the "Dimes" property holders desire a division of the property, and to that end have brought a suit, and obtained an injunction against the working of the "Dimes" ground. The "Wide West" Company are not working upon that ground, and for the present, at least, do not desire to do so. They are confining their operations to their own original ground. It appears that an effort is being made to mystify the true character of the controversy, and thus depreciate the "Dimes" stock for speculation.

We have just examined, at the office of Thomas Ogg Shaw, 422 Montgomery street, some very rich specimens of gold quartz, taken from the Copper Hill Lead, Sierra county, Nevada Territory.

### GENERAL MINING STOCK REPORT.

SAN FRANCISCO, Jan. 19th, 1863.

#### STOCK REMARKS.

The business of the past week, although very considerable, does not equal in amount that of the week previous. The increase of business for the two weeks past may be attributed, to some extent, to orders from abroad for agents here to invest in well established mines.

Ophir has declined \$200 during the week, with no apparent cause. The accounts from the mine to date, fully confirm the favorable reports of last week; the "rich strike" north of the Mexican is now known to be a reality and more very rich ore in a gallery, just opened, is reported.

Gould and Curry has advanced another hundred during the past week, and appears to be the favorite in the market. Sales of the January dividend have been made as high as \$81 per foot, and \$100 is confidently expected by many of its friends, after the present month. Twenty of the forty stamps are now in operation, and the other twenty will probably be started to-morrow or day after.

Savage is still improving. It is quick in the market, and shares are freely taken when offered at anything near the market price. Sanborn & Co. place it among the first class, and quote a sale at \$1,010, although the general range of this stock, during the week has been from \$60 to \$90 dollars.

Hale & Norcross has not been much in demand, during the week. It is held firm at \$125 to \$130.

Chollar has not been as active as last week. It started on Monday, at the Board at \$410, and fully maintained its stand during the week. The delay in the decision of its suit with the Potosi, renders bidders a little shy. This decision is anxiously looked for.

Potosi is still advancing. On Friday and Saturday it stood at the Board at an advance of from 25 to 30 over the last week.

Burning Moscow, as indicated last week has materially advanced—from 10 dollars to the foot. It is now quoted at \$87½. Further advances are anticipated.

Sierra Nevada declined somewhat at the close of the week, in consequence of an assessment of \$15 per foot being levied by the Company, on Thursday last. The depreciation was about equal to the assessment. Considerable stock has changed hands during the week.

Norton which has been very quiet for several weeks and scarcely quoted at all, took a sudden start this week in consequence of the report that the Company "had struck it rich," going up from \$14 on Monday to \$34½. It is said that the Company have struck very good rock in their lower tunnel, at

depth of 200 feet from the surface—thus fully establishing the permanency of their mine.

The Dancy, which was not heard from the week previous, had buyers, last week, at from 100 to 200 dollars. Their due mill, it is expected will go into operation about the 1st of February.

Iowa is quoted the past week at from \$110 to \$120—Very little done

#### ESMERALDA STOCKS.

Esmeralda Stocks appear to be attracting much more attention in this market than formerly. We would call attention to the notice in another column of the Mining Stock Board recently established there, and to the stock transactions reported in their appropriate place. This report it will be noticed is somewhat ancient—but is the latest which has come to hand at this office. Our friends of the "Star" have neglected us the past week.

Wide West still continues a live institution and is rapidly advancing to the rank of a first class mine. It has improved from 40 to 50 dollars the past week and now stands firm at \$400. The Company are taking out from four to five thousand dollars a week, at the present time, from a very small, inefficient mill. This stock will doubtless continue to advance rapidly for some time to come.

The Antelope has also made a large advance, fully 50 per cent on its last week's rates. It is now quite firm at from \$200 to \$215.

#### REPORT OF SALES At the San Francisco Mining Stock Board, For the week ending January 17, 1863.

\* 4 shares to 1 foot.

§ New Stock.

#### Coso Stocks.

The Josephine changed hands at the Stock Board, on Monday and Tuesday at 15 dollars, on Wednesday and Thursday at 16, on Friday at 14.

Coso—changed hands on Wednesday at 8½ dollars and on Thursday advanced to 16. It was quoted at 12 dollars on Friday.

Willow Springs—15 shares sold on Monday at \$35, and 5 on Wednesday at \$40. Holders generally asking \$45.

#### Mexican Mines.

Mina Prieta finds no recent buyers, but is held at \$140.

Dios Padre was quoted on Monday a 25 dollars, on Tuesday at 43, on Thursday at 30. Not quoted on Friday or Saturday.

#### TRANSACTIONS IN SHARES. \*

Ophir—24 shares at \$2,650 per foot; 60 at \$2,750, 60 days; 12 at \$2,500; 36 at \$2,550, 120 at \$2,600; 72 at \$2,700.

Gould & Curry—10 at \$3,100; 12 at \$3,100; 20 at \$3,000, 60 at \$3,000; 24 at \$3,000; 8 40 at \$2,950.

Chollar—20 at \$415; 20 at \$415; 1 2 at 405.

Savage—5 at \$850; 5 at \$835; 11 at \$910; 30 at \$1010.

Potosi—20 shares at \$130.

Sierra Nevada—20 at \$65; 10 at \$60; 2 at \$45; 20 at \$55; 10 at \$57½; 50 at \$54; 20 at \$60; 15 at \$52½.

Burning Moscow—16 at \$70; 30 at \$72½; 10 at 78; 30 at \$80; 20 at \$80 86 at \$85; 60 at \$85; 60 at \$87½.

Charles Caney—20 at \$18; 43 at \$18; 40 at \$19.

Meredith—20 shares at \$25.

Central—24 at \$1,500; 12 at \$1,600.

Hale & Norcross—8 at \$425; 50 at \$520.

Dancy—50 at \$200. North Potosi—3 at \$6; 16 at \$6.

Rogers, F. D.—60 at \$10; 25 at \$15.

Norton—50 at \$23; 36 at 20; 30 at 26; 15 at 29, 40 at 30; 25 at 32; 20 at 35.

#### ESMERALDA DISTRICT.

Wide West—45 shares at \$405; 20 at \$410; 25 at \$390; 20 at \$415.

Antelope—50 at \$222½; 20 at \$225; 10 at \$250; 10 at \$200; 25 at \$216; 10 at \$220.

Real del Monte—15 at 28; 30 at 25; 50 at 26; 10 at 24.

Silver Hill—15 \$28; 10 25; 40 at 24.

Etna—50 at \$5.

\* Quotations made at given rates per foot.

#### ESMERALDA STOCK REPORT.

At the first meeting of the Esmeralda Stock Board, held January 2nd, 1863, the following business was transacted in stocks, as reported in the Esmeralda Star.

Wide West—new stock—25 feet offered at \$400; bid 350 on 90 days.

Antelope—50 feet offered at \$150; bid 125 on 60 days.

Utah—25 feet offered at \$50; bid 40 on 90 days.

Rodie Bluff Consolidation—50 feet offered at \$10; bid 6, cash.

Ural—10 feet offered at \$250; bid 200, on 30 days.

Etna 40 feet offered at \$5; bid 3 50, cash.

Mount Bruley—30 shares offered at \$25; no bid reported.

Peru (two feet to the share)—25 shares offered at \$8; no bidders.

Garibaldi—10 shares offered at \$20; bid 20, cash.

Heath—offered at \$10; no bidders.

Falls of Clyde—100 shares offered at \$5; no bidders.

Old Winnemucca—30 feet offered at \$10; no bidders.

St. Louis—\$12 bid; no stock offered.

Hanover—20 shares offered at \$25; bid 12.

Live Yankee—25 shares offered at \$10; bid 8.

Nevada—25 shares offered at \$10; no bidders.

Del Monte—12 shares offered at \$20; bid 15.

#### WASHOE STOCK REPORT.

[Compiled from THE DAILY TERRITORIAL ENTERPRISE.]

Monday, Jan. 5th.—Mining operations are still being carried on with quite as much vigor as at any previous time during the season. The weather has thus far been extremely favorable for winter operations.

The Duna Company's ground still continues to present favorable appearances, and can be sold at low rates. The indications are that the ledge improves with its depth. The Siola Company expect to reach their ledge soon, with their tunnel, which will strike it at a depth of 160 feet. The stock of this Company is chiefly held by the original locators. The Union Company have lately had about 50 tons of their rock crushed, which, though not rich, gives encouragement for further prospecting, the mine evidently improving with its depth. Stock in demand at low figures. Hazel Green and Dargun are quiet in the market.

The Lafayette Company, Gold Hill District, the chief part of whose stock recently passed into the hands of San Francisco capitalists, presents favorable indications. It is believed the enterprise will prove a paying one. Twenty feet of the Bloomingdale gold, to-day, for \$4 per foot. Birdsal has been acquired for at \$20. Twenty feet of Baltic sold for \$17 per foot.

Tuesday, January 6th.—The Summit District is beginning to attract some attention among miners who are willing to engage in prospecting the various leads in that locality. The Flowery Hill Company have struck some very rich rock in their ledge near the surface. They are now engaged in running a tunnel, to strike their ground at a depth of fifty feet. Several transfers have taken place in this District to-day; particulars not given.

Accounts from Palmyra continue favorable to the success of the mines in that District. Flowery diggings are not generally in demand. Claims in this locality are looked upon by those seeking to invest, with a shade of suspicion, as to their permanency; the developments, thus far, having proved unfavorable for the future success of these mines. There are several, however, which have been found rich at the surface, but which have not yet been proven at a sufficient depth to determine their real value.

But few claims in the Devil's Gate District are esteemed of much value. The Pride of the West may be set down as the only claim in this locality which is being successfully worked, or promises fair for future prosperity. The stock of this Company does not appear in the market.

Buchanan is salable at \$60 per foot. Ashland is without buyers at \$10. Zouave is offered at \$8. Union is offered at \$10, with no demand; Hazel Green at 5, and no sales, and Oriental is offered at 4. Operations for the day limited and sales unimportant.

Wednesday, Jan. 7th.—No sales of importance quoted. El Dorado is reported at \$60; Utah at 45; Santa Rita at 35; Zouave at 7; Gov. Nye at 6; Madison at 25; Fairview at 20. Cedar Hill Tunnel at 450; Baltic at 20; Hazel Green at 5 and U. S. Tunnel at 750 dollars per quarter share.

Thursday Jan. 8th.—Little business, of note, was done in stocks to-day. It is a gratifying fact, however, that the limited number of transfers during the past week, is due more to a disposition on the part of the holders to wait for an advance of prices, than any reluctance to invest on the part of capital. The members of the Sacramento Company were somewhat elated, to-day, by receiving the returns of some ore from their mine, crushed in this city, at Bradshaw & Co's Reduction Works. The result of the crushing was \$1,113 42 in gold, and \$40 57 in silver. (We gave the item in our last issue.) Such a handsome return of ores from a second rate lode in the Territory, remarks the "Enterprise," is extremely gratifying, and affords additional evidence of the almost incalculable mineral resources of our gold and silver mines.

Friday, Jan. 9th.—A small lot of Palmyra stock has been presented in this market, at prices which would no doubt be esteemed low by those conversant with these claims; but, as yet, there is no especial demand for stock in that district. Some activity is manifested in La Crosse, whether from any new developments made in the claims, or the small demand for the stock, is not reported. Several transactions, it is said, have been perfected to-day, at prices above the usual rates.

Ashland is offered at \$10, Madison at 20, Burning Moscow at 65, Sierra Nevada at 65 and Santa Rita at 40. 16 is offered for Birdsal and 17 50 asked. Hazel Green and Oriental are offered at low rates without sales.

Saturday, Jan. 10th.—The stock trade has been rather brisk to-day, although no very important business has been reported. Eighteen feet of the Oriental sold for \$3 50; 30 shares Cedar Hill Tunnel 4 50; 15 feet of El Dorado, thirty days, 70; 10 feet Birdsal at 17. Some Gold Hill ground changed hands, but the figures are not reported. Madison is quoted at \$25, Peach-Paxton at 35, Baltic at 19, Zouave at 8, Hazel Green at 4 50, Geller at 6, Burnside at 10, Fairview at 20 and Sacramento at from 35 to 40 dollars.

#### HUMBOLDT STOCK.

Considerable Humboldt stock continues in market, but aside from the Mars, Cuba, Sheba, South Extension of the Sheba, and three or four other claims, there is little or no inquiry in that direction. There is also a large quantity of Eagle and Silver Mountain district stock, but entirely without buyers.

The following stocks, not enumerated above, are in the market in Virginia City, and held at the figures annexed:—

Santa Fe	25 00	Summit	55 00
Empire	25 00	Washington Leds	6 00
Milton	25 00	Milton	00 00
McBee	10 00	Laboring	17 50
Belvidere	00 00	Swezy	00 00
Taylor	4 50	Caledonia	10 00
Dargun	00 00	St. George	4 00
El Dorado	00 00		

**SUBSCRIBE.**—Are you a miner and not a subscriber to the MINING AND SCIENTIFIC PRESS? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the PRESS, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the MINING AND SCIENTIFIC PRESS. We invite all to send us their names and *four dollars*, or *two dollars* for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so far meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the PRESS for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short period.

**ONE YEAR'S TREASURE EXPORTS.**—The shipments of treasure from San Francisco, during the year just closed, were as follows:

To New York.....	\$26,194,034 93
" England.....	12,950,139 61
" China.....	2,660,755 29
" Japan.....	17,916 00
" Manila.....	65,651 64
" Australia.....	121 10
" East Indies.....	62,414 00
" Panama.....	434,507 79
" Hawaiian Islands.....	3,000 00
" Punta Arenas, C. A.....	10,000 00
" Mexico.....	5,000 00
" Victoria.....	188,221 71
Total.....	\$42,561,761 07

**DRAWN OFF.**—The California Stage Company have ceased running their stages on the Henness Pass route for the winter. Cause—the almost suspension of travel to Washoe at this season of the year.

Astronomical observations were first made at Babylon.

**RECENT PATENTS**—Granted to CALIFORNIA INVENTORS through the Pacific Patent Agency.

**HERMAN CAMP**,—Patent for Quartz Crusher and Amalgamator.

**W. H. RICHARDSON**—Patent granted for *Washing Machine*.

**E. E. MATTESON**, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

**ELANDER HEATH**, San Francisco: *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

**G. F. DEETKEN**, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

**C. W. THOMAS**, Plaining Mill, California street, facing the Mission R. R. Depot. San Francisco. m1

**TURNER, MARSH & OSGOOD**, Successors to C. O. Turner & Co., importers of Wines and Liquors, S. E. cor. Front and Sacramento sts. m1

**D. R. J. BEERS**—Dentist, 617 Clay street. All operations on the teeth performed in the most skillful and approved manner. ap16

**KELLY & WADE**, Importers and Dealers in Paints, Oils, Turpentine, Etc. Nos. 105 & 107 California street, Bet. Davis and Front. m16

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine.....3cts per oz.  
" from 300-1000ths. to 750-1000ths fine. 7cts " "

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

## CORNS AND BUNIONS REMOVED.

**DR. BYRON C. KENNEDY**, practical CHIROPDIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the best persons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field or your exertions in the new and growing city of the Pacific.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hackneyed course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was blind and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonably.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

## Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

PACIFIC PATENT AGENCY. . . . J. SILVERSMITH,  
SOLICITOR.

PACIFIC MAIL STEAMSHIP COMPANY'S line to PANAMA  
Connecting via the Panama Railroad with the steamers of the Atlantic  
and Pacific Steamship Company, at Aspinwall.

## FOR PANAMA.

The following Steamships will be dispatched in the month of January, 1893.

Jan. 10th—St. LOUIS, Captain E. S. Farnsworth,

21st—GOLDEN AGE, W. H. Hudson, Commander.

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,  
and connect, via Panama Railroad, at Aspinwall, with steamships for N. York

For freight or passage, apply to

A. B. FORBES, Agent.

Corner of Sacramento and Leidesdorff sts.

## LATEST IMPROVEMENT

in LADIES' BUCKLES.

F. REICHEL RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at our address,

FREDERIK REICHEL,

Manufacturing Jeweler,  
620 Merchant street, San Francisco.

## REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL WORKS  
has removed to 318 California street. Having enlarged our Works at  
the Beach, we are now enabled to reduce from 10 to 15 tons of Silver or  
gold rock per day.

Sold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings  
purchased or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments.

S. C. BRADSHAW, Agent,  
318 California street, near Sansome, up stairs.

## WRIGHT'S PICKS.

WRIGHT'S PUNCH PICK

JOHN WRIGHT, of Sacramento, has established himself in San Francisco  
for the manufacture of every description of PICKS, of the best material,  
reduced prices. Pick Picks of the best iron furnished in any quantity, at  
reduced rates. Orders from the country promptly attended to. N. B.—None  
genuine unless stamped with my name.

JOHN WRIGHT, 511 Market street,  
Opposite Battery, San Francisco.

## LABOR-SAVING

## Rock Drilling Machines.

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRY-  
men. The subscriber, Patentee and Agent for GARDNER'S PATENTS,  
continues to receive orders for

HAND, HORSE, AND

## TEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Gallies,  
etc., etc., one man performing the labor of three in the ordinary way.  
FOUR-HORSE POWER MACHINE, operated by one man, drives a ma-  
chine capable of drilling a four to six inch diameter hole in granite four feet  
deep, and in hard limestone, six feet per hour—the rapidity of the work  
being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the  
machine, and its entire success in reducing the cost of drilling holes to one-  
tenth of the former expense, and on a rock excavation of any extent, from  
ten to seventy-five per cent. on the entire work. Responsible parties who  
have rock excavations to make in any part of the State, the subscriber will  
undertake and guarantee to perform the work required, at a saving of at  
least twenty-five per cent. over any other process.

Address orders to  
WM. W. DUNN,  
Fremont street, bet. Market and Mission, San Francisco.

## A. ROMAN &amp; CO.

## Dr. Van Zandt,

Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practi-  
cal Medicine.

The Mysterious Problem of Material Nature, Electricity!  
Made Subservient for the Cure of all Nervous  
and Spinal Diseases.

THAT THIS PRINCIPLE, successfully applied to diseased states  
of the system, is to prove a great strength, long wanting  
by physicians, to aid their medicines in overcoming organic and functional  
derangements of the human body. It is a part of the great principle of vitality  
known as nervous influence and necessarily must have much to do in  
obviating diseased action.

## Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equi-  
librium of the ELECTRIC principle; and should this secret and hidden equi-  
poise of health be broken or lowered—should the body be negatively electri-  
fied when it should be positively charged—is not the current broken, and  
is there not a war of forces going on in our system? This needs correcting,  
and in order that the tissues of the body should be susceptible to remedial  
agents we must first restore and

## Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly  
in this great magnetic or electrical intensity of the earth, with its influence  
upon our bodies in health and disease, I am led to take advantage of the  
press, through which to awaken attention to the subject, that good may  
come to all.

## No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life  
blood, render the stomach, liver, heart, kidney and all the natural func-  
tions active by ELECTRICAL excitation, and at once the aged, the palsied,  
the nervous, the dispirited, the melancholic, the dyspeptic and the invalid  
revive under its benign influence.

## To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and  
office practice, is owing to his correct views of the origin of all their mal-  
adies. Ladies can consult him with entire confidence, as he is no speculator  
upon human ills—but is proving himself the only member of the legitimate  
profession in California who is really successful in removing those ills which  
are the peculiar province of the sex. His high appreciation of their deli-  
cately attuned nervous organism, together with their great sympathetic  
life, renders him doubly able to assuage those silent complaints which  
they bear so patiently and so long. No social disquietude need longer af-  
flict our home circles; for he can arouse the stricken energies; restore the  
wonted tonic of the body; awaken the melancholic and desponding; ar-  
rest those drains which cause so much anxiety; cure those protean mal-  
adies which have so long

## Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at  
the stomach, wandering pains, wasting away of strength; extreme debility  
and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that  
general depression of life's powers, which go to render her life a misery  
and death a boon. Dr. Van Zandt, with his new method of exciting the  
Electro-Galvanic current, together with his remedial measures which are  
adapted to the necessities of California, will assure you of a complete and  
radical recovery of all bodily and mental infirmities, and will restore you  
to usefulness, and spare you a blessing to your family and to society.

## All the World Over

wherever disease exists, whether special to the soil and climate or com-  
mon to all regions—epidemic or casual, acute or chronic, contagious or non-  
contagious—it is as necessary to restore the ELECTRO-GALVANIC equilib-  
rium, especially in California, as it is to give food to the starving. This state-  
ment is based upon a series of facts extending through many years, and  
verified by hundreds of patients; so that no principle of science, no rule of  
experience, no result of any well known cause, rests upon more sure and  
unassailable foundations, than those which underlie the world-wide reputa-  
tion of Electricity for the cure of all nervous states of the body, faulty di-  
gestion, mental and physical debility or prostration, coughs, asthma, wan-  
dering pains of a rheumatic, gouty or mercurial character, and all forms of  
disease, the result of scrofula or coarctate habit of body.

## None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—  
melancholy which you cannot shake off—loss of power which you cannot re-  
gain—depression of spirits which weigh you down—wakefulness that knows  
no sleeping—business that languishes for want of energy—a void which no  
society can fill—suspicion which no assurance can allay—Go to Dr. Van  
Zandt, for his cure, and the safety with which he administers his  
new method of Electrical excitation, together with his remedies, which are  
adapted to the requirements of climate and constitution, will assure you a  
radical removal of all bodily and mental infirmities, within the scope of  
science and man to remove.

## The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt  
has made these afflictions an especial study, and that he is the only Sur-  
geon on our State, who has a diploma for that branch of practice. Very  
many of the eye and ear troubles are purely deranged nervous actions, and  
are cured by his electro-galvanic battery—as amaurosis, squinting, catar-  
act, floating specks before vision, twitching of the eyelids, nervous deafness,  
roaring and buzzing noises in the ears, giddiness, etc. All operations suc-  
cessfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

nov29—3m

## FREDERICK KESMODEL,

Cutler and Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September,  
1893, also in Sacramento in 1891 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one in-  
terested, is called to his new method of fitting and adapting Trusses to the  
different cases. It is a well known fact that there has as yet been no system  
of fitting Trusses. There are many different styles which have proven good  
in many cases, but they are all uncertain and cannot be relied on, and in  
severe cases are altogether useless. The following are some of the advan-  
tages I claim for these trusses above any and all others: First—The Pad is  
formed on the parts to be compressed by taking a plaster cast. Second—  
Having a correct model, it enables me to make the Pad of any desirable  
material, such as horn, ivory, etc. Third—The Pad is so adjusted to the  
spring that no movement of the body will move or displace it. There are  
many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,  
Inventor and Patentee.

## The Occidental Hotel

IS NOW  
Open for the Reception of Guests.

THIS HOUSE HAS ALL THE MODERN IMPROVEMENTS, and will be conducted equal in every respect to the first class houses of the Atlantic cities. The spacious READING AND EXCHANGE ROOMS, have been fitted up with special reference to the comfort and convenience of the public generally, having a news stand and large Cabinet for minerals; also, a Branch Telegraph Office connecting with all the lines throughout the country.

LEWIS LELAND & CO.,  
Proprietors.  
San Francisco, Jan. 1st, 1863.

## To Mill Owners.

WANTED, by a person fully competent to the position, a situation as MINING SUPERINTENDENT in a Gold or Copper Mine. The Applicant was engaged for about eight years as Superintendent of Copper Mining Works in Cornwall, and has acted in the same capacity in Gold Mines in this State for the past year and a half. He has had much experience, in Cornwall, as an Assayer, a Machinist, a Draughtsman, a Surveyor and an Assorter of Copper Ore. He can give ample testimonies as to his capacity for the position he seeks.

Apply at this Office.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco. Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency. The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,  
No. 15 Naglee's Building.  
Lithographic Maps can be seen and had at the above named office. no 13 6mo

## V. SQUARZA'S Punch Factory.

MR. SQUARZA IS FAVORABLY known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is as fair in the chemical distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants. The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,
Cognac do.	Whisky do.
Arac do.	Kirschwasser do.
Anti-Divorce Punch,	Cocoa do.
Coffee do.	
Tea do.	Morning Comfort,
Pineapple do.	Kummel,
Anisette,	Brandi Cocktail,
Kirschwasser,	Anti-Dyspepsia Bitters,
Appetiser,	Ladies' Trars,

And CHAMPAGNES of all brands.

DIAMONDS,

JEWELRY AND

SILVER WARE,

AT

BRAVERMAN & LEVY'S,

621 Washington Street,

WE CALL THE ATTENTION OF OUR FRIENDS AND the public in general to our well assorted stock of

JEWELRY AND SILVER WARE,

Of the latest and Most Fashionable styles, which we have received by the last Steamer. Also,

FRENCH CLOCKS,

AND

PRECIOUS STONES,

Which we are selling, SET or UNSET, at the very LOWEST PRICES.

BRAVERMAN & LEVY,

Dec 29 1m

No. 621 Washington Street, Facing Maguire's Opera House.

LEANDER RANSOM,

Civil Engineer

AND

SURVEYOR,

Having been connected with the public works of the State of Ohio for 20 years, and the public surveys of the State of California for 7 years.

ALSO

STATE LOCATING AGENT.

And as such having the sale of

600,000 ACRES OF STATE SCHOOL LANDS,

At the low price of \$1.25 per Acre.

Terms—Twenty per cent in cash and the balance on a credit of several years. OFFICE: Second floor of Express Building, N. E. corner of Montgomery and California streets. oct-3m

## Agency For Patents.

THE UNDERSIGNED having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Caveats and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETHERED & TIFFANY,

Office, 410 Montgomery street.

CHARLES R. BOND, (Late City and County Assessor.)

REAL ESTATE AGENT,

No. 410 Montgomery street, San Francisco.

REAL ESTATE PURCHASED AND SOLD, AND LOANS NEGOTIATED.

## For Sale Cheap!

A HORIZONTAL STEAM ENGINE OF 4-Horse Power, Flue Boiler, in excellent order, capable of driving a ten stamp mill, for sale at half its original cost. Apply to

JULIUS SILVERSMITH,  
Federal Building, cor. Battery and Washington Sts. Room, No. 23.

W. T. & J. GARRATT,

City Brass and Bell Founders

Cor. First & Market sts., San Francisco.

BABBIT METAL CASTINGS, FIRE ENGINES, FORCE and Lift Pumps, Church and Steamboat Bells, Tavern and Hand Bells and Gongs, Hose and all other joints, Gauge cocks, Cylinder cocks, Oil Globes, Steam Whistles, HYDRAULIC PIPES and NOZZLES for MINING PURPOSES, Iron steam pipe furnished with fittings, &c., COUPLING JOINTS of ALL SIZES. Manufacturers of "Garratt's Patent Improved Journal Metal."

F. G. BEPLER,

Practical Coppersmith

No. 118 (Old No. 22) Bush street,

Between Sansome and Battery, SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants, and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work. All orders from the country promptly attended to.

## DEETKEN'S

Chemical and Metallurgical Works,

On San Bruno Road, Islais Creek,  
SAN FRANCISCO.

CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON. ALL THE GOLD EXTRACTED by Chemical process. Yield of Sulphurets from 20 to 50 per cent higher than the BEST AMALGAMATION PROCESS.

Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov-8m

## SQUARZA'S PUNCH.

HOME MANUFACTORY.

WHOLESALE AND RETAIL,

No. 44 Leidesdorff St., near Sacramento.  
Branch at 406 Montgomery street. my 30

JULIUS SILVERSMITH,

Commissioner for Nevada Territory,

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery & Washington streets,  
Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE who have business relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

JAMES PHELAN;

(LATE J. & M. PHELAN.)

IMPORTER AND JOBBER,

Wines, Liquors, Etc., Etc.,

Nos. 616 & 618 Front street,

Between Jackson and Pacific Streets,  
Established 1849. SAN FRANCISCO.

All Goods Guaranteed. Orders Solicited  
TERMS LIBERAL. Jan. 1-1f.

THEODOR KALLENBERG,

Maker of Models

FOR INVENTORS.

MACHINES, MATHEMATICAL, Optical and Philosophical Instruments, Scales, Weights, etc.; Stamps, Dies and Die Sinking, Embossing Stamps. Repairing of Machinery promptly attended to. No. 4 Sansome street, corner Market, (a 7.3m) San Francisco.

DEVORE & COS.'

STEAM ENGINE

—AND—

MACHINE WORKS,

Corner Market & Fremont streets,

ALL KINDS OF MACHINERY, SUCH AS STEAM ENGINES, SAW MILLS, Irons, Flour Mills, Quartz Mill etc., etc., made to order and repaired.

ALSO,

BLACKSMITHING, TURNING, FINISHING, PLANING and SCREW-BOLT Cutting AGRICULTURAL MACHINERY made and repaired. Duplicate parts of Threshing and Reaping Machines and Threshing Teeth made to order on the most reasonable terms. Steam Engines and Boilers constantly on hand, and for sale cheap. Screw-Cutting and Turn Lathes for sale. DEVORE & CO

VOL. VI.

SAN FRANCISCO, MONDAY, JANUARY 26, 1863.

NO. 13.

#### MINERAL PRODUCTS OF GREAT BRITAIN.

The statistics of the mineral produce of Great Britain, for the year 1861, are given in detail in a late issue of the *London Mining Journal*, from which we condense as follows:

MINERALS.	QUANTITY IN TONS.	VALUE.
Tin .....	11,640	\$ 3,482,768.
Copper .....	531,487	6,850,632.
Lead .....	90,696	5,453,992.
Silver ore .....	29	7,060.
Zinc Ore .....	15,770	149,340.
Pyrites .....	125,135	382,632.
Arsenic .....	1,450	52,208.
Antimony .....	15	216.
Manganese .....	925	14,040.
Nikel, Ochre and Wolfram .....	3,037	14,728.
Iron Ore .....	7,215,518	11,051,380.
Coals (sold and used) .....	83,635,214	100,362,262.
Other Minerals .....	2,222,602	4,224,688.

Total value of minerals produced in 1861, \$132,045,936.

The above, it will be observed, is the amount and value of mineral ores produced, exclusive of gold. We give below the amount and value of metals obtained from the ores.

Tin .....	Tons	7,450	\$4,371,656.
Copper .....	15,331	7,546,464.	
Lead .....	65,643	6,937,224.	
Silver .....	Ounces	569,530	691,972.
Zinc .....	Tons	4,415	379,784.
Iron, Pig .....		3,712,390	44,548,680.

Total value of the above \$66,476,780.  
Gold yield..... 51,916.  
Estimated value of other metals..... 1,202,400.  
Value of coals—83,635,214 tons..... 100,362,252.

Total value of metals produced, and coals. \$168,012,348.

For the purpose of enabling the reader to readily institute a comparison between the mineral yields of the two countries we here append a table of the

MINERAL PRODUCTS OF THE UNITED STATES FOR 1859, compiled from the last census Report. It will be seen, on comparison, that the United States produce about two-thirds as much, in mineral value, as Great Britain. We compare the yield of 1859 with that of 1860 in Great Britain. There is every reason to believe that another decade will place the mineral yield of the United States on a par with that of England, and all her colonies added. The yield for 1859 is as follows:—

Gold .....	\$47,744,462
Silver .....	610,010
Quicksilver .....	2,000,000
Copper .....	3,316,516
Iron .....	19,487,790
Zinc .....	72,600
Lead .....	977,281
Nickel .....	28,176
Coal .....	91,365,765
Coal Oil .....	1,092,450
Salt .....	2,265,302

Total.....\$97,659,252

The production of silver in the United States has largely increased since the census was taken, as the working of the Washoe mines commenced about that time.

The great wealth and power of both nations lies in their immense mines of iron and coal. In the former, it will be seen that we as yet produce only three-sevenths of the amount produced by England. Of the latter we produce only one-fifth as much. In the comparative richness, variety and extent of mineral territory and resources, we infinitely excel Great Britain.

We further condense from the *London Mining Journal* the following

#### REMARKS.

**GOLD.**—The returns above given for 1861, contain the first actual report of gold from a British mine. This gold, 2,784 ounces, was obtained from one of the quartz lodes in Dolyelly, Mirionethshire. The natural consequence of this gold discovery has been the formation of several Companies to work other lodes of a similar character in North Wales, in the progress of which considerable interest is felt among British mining circles.

**SILVER.**—The silver, which appears in the above exhibit is nearly all obtained from the lead produced by the mines within the kingdom.

**COPPER.**—The production of copper for 1861 shows a decrease to the amount of \$683,548 from the product of 1860. But there was not as much exported in 1861 as there was the previous year. In addition to the amount of \$7,546,464 in values of copper produced, as per above exhibit, there was smelted of foreign and colonial ores an amount valued at \$7,672,440.

**TIN.**—The quantity of tin ore produced in 1861 was some what larger than that of 1860, but about the same with the yield of 1859. The demand of this metal for the American market is reported as having greatly fallen off during the past year. The export of tin plate to the United States in 1860 was about \$5,000,000 in value. In 1861 it was only \$2,472,912. This falling off in the demand for tin led to a very material reduction in its price in the English market.

**LEAD.**—The product of the lead mines of the United Kingdom for 1861 shows an increase of 2118 tons over 1860.

**ZINC.**—Owing to the low price of this metal during the year, several Zinc Mines suspended operations.

**PYRITES OR SULPHUR ORES.**—The amount of ores of sulphur produced in 1860 was about 10,000 tons less than the produce of the previous year—which was reported 135,669 tons. The amount of these ores imported during the year 1861 93,528 tons; quite an amount of this aggregate was made up of shipments from this State.

**IRON.**—The Pig-Iron produced was also slightly depreciated from the product of 1860. Means are being taken to obtain more accurate results as to the cost of producing iron in the various districts throughout the Kingdom.

**COAL.**—Much interest seems to be manifested at the rapid waste and exhaustion of English coals. The Report before us speaks as follows upon this head:—

The rate of exhaustion which is going on over our coal fields still increases. From 3,052 collieries there was used and sold in 1861, 83,635,214 tons; 2,500,000 tons were wasted in the process of working, and burnt at surface on the

collieries of Durham and Northumberland only. The total waste must, therefore, have been very large, although information thereof could not be correctly obtained.

#### RECENT INVENTIONS.

**ELECTRIC LIGHT IN MINING.**—A French inventor has produced an apparatus for an electric light designed for miners, which is said to be decidedly superior to anything yet introduced and perfectly safe from gas explosions, by means of a proper isolation. The apparatus is convenient and portable, and will burn for twelve hours without diminution of light. The inventor hopes to still further improve the apparatus in several particulars—such as compactness, intensity of illumination, duration, etc.

**GAS FROM COMMON AIR.**—M. Mongruel is the inventor of a process for making gas from air, and the gas so produced is exhibited on Aldersgate street, London. The air is conveyed through a tube to a vessel containing the matter which renders it ignitable, and from thence it passes to the lamp. The light is much clearer than that proceeding from the ordinary gas; it is represented to be much cheaper, and the inventor announces that explosion is impossible.

**APPLYING WASTE HEAT FROM COKE OVENS.**—An invention which relates to the mode of utilizing the spare heat of coke ovens, for the purpose of heating air for blast-furnaces, calcining ironstone and other materials, and for heating and smelting iron, has been specified by Mr. J. Harding, of Leeds, Eng. He causes the mouths of a group of coke ovens to open into a flue, which leads directly to the chamber in which the heat is to be employed.

**IMPROVEMENT IN ROLLING IRON, &c.**—There is now in course of erection at the Dowlais Iron Works, a self-acting blooming machine for blooming railway iron, etc. It is claimed to be the greatest improvement made since rolling commenced. Mr. Charles White, of the Taff Vale Rail Works, Wales, is the inventor and patentee.

**SEWING MACHINE IMPROVEMENTS.**—A new sewing machine has been brought out, working two needles at once. It is intended to work on gaiters, boot tops, and other articles requiring parallel seams. Another invention recently brought, before the public is a button-hole stitcher, which has been adopted, and the right to use it is purchased by the leading sewing machine companies. It holds the cloth steadily while the needle revolves. Still another is announced, which in addition to performing all the styles of common plain sewing, will make any requisite description of embroidery, fringe, gimp, ruffling, netting, &c., at the rate of a yard a minute. The embroidery is said to be especially beautiful, and superior to the finest Parisian, and all the trimmings are better than can be made by hand, either light or heavy, and of various colors.

**MULTIPLICITY OF PATENTS.**—In the official list of "Agricultural Inventions or Discoveries for the year 1861," are 25 bee-hives, 51 cultivators, 26 churns, 70 harvesting implements, 26 corn planters, 41 plows, 45 seeding-machines, and 19 thrashing-machines.

## MINING NOTABILIA.

**THE OPHIR.**—The workmen in the Ophir mine, on Saturday last tapped a ledge—probably the Virginia—from which a stream of water flowed, in such quantity that the pumps were unable to keep it down. As a consequence the works were stopped, at last accounts, from the water rising in the mine.

**THE total yield of gold from British Columbia up to Jan. 1st, 1863, as reported by public shippers is \$6,917,146.** These figures do not include the shipments through private hands. The amount so shipped would probably swell the total yield of the Colony since the first discovery of gold there to about \$7,500,000.

**ESMERALDA.**—The last *Aurora Star* gives a good showing of the mining affairs in the Mono and Esmeralda regions. The "Bodie Bluff Consolidation," the "Julia Elizabeth," on Martinez Hill, and the "Monroe and Thatcher Tunnel," in Willow Gulch, all seem to be prosperous, with rich yields in the present and richer prospects ahead.

The Stock and Exchange Board recently established there meets with some considerable opposition on the part of a portion of the people; but the *Star* appears to think that it will prove beneficial to the District by driving worth less stocks from the market and enabling those who have really valuable stock to bring the same into notice upon their real merits, with an official character and place assigned them in the weekly authenticated reports. Much, no doubt, might be said both for and against the plan of this organization. Reports and transactions of this Board will be found regularly in our columns under its appropriate head.

**GOLD MINING ON THE FRESNO.**—The *Mariposa Gazette*, of the 13th January, says that the gold veins on the Fresno are paying well, wherever they are worked. Several parties, in lieu of something better for separating the ore, are pounding the rock in mortars and making good wages.

**SALE OF A MILL.**—"Winter's Mill," on Carson River, about two miles above Dayton, has been sold to the Ophir Company who will immediately erect crushing machinery on an extensive scale—100 stamps being named as the probable complement of the mill under its new auspices. The water power is represented to be abundant.

**FOUND IT AGAIN.**—The Virginia City *Union* says that the Enterprise Company, on the hill a short distance west of town, after running their lower tunnel in about fifty feet, have again struck their ledge, which is some four or five feet wide, and appears to be rich; in fact, there are none but rich ledges in that hill.

**MINING IN NEVADA.**—The Nevada *Transcript* says: "All the ditches at Quaker Hill are full, and the miners in that vicinity have commenced operations. The claims of Jacobs & Sargent have undergone a thorough overhauling. They are now ready to commence to take out thousands of dollars. Sneath & Clay on Gold Flat continue to take out cart loads of rock filled with the bright ore. An offer of \$100,000 was made to one of the parties, a short time since, for one-third, and was refused."

**TREASURE SHIPMENT.**—The treasure shipment per steamer Golden Age, was as follows:

To England.....	\$1,336,894 07
" New York.....	354,921 29
" Panama.....	35,000 00
" Acapulco.....	5,000 00
Total.....	\$1,731,815 36

**CORN FOR FUEL.**—The Delzell steam mills at Alanta, Illinois, are now running with corn for fuel instead of wood, that article being cheaper and more easily obtained than either wood or coal.

**POND'S NEW QUARTZ MILL.**—This mill has been completed, and its first trial on Wednesday last, at the Miners' Foundry, which was made in the presence of a large number of experienced mill men, was pronounced a complete success. We defer any description of it until the engravings designed for its illustration in our columns are ready. We had expected them in season for the present issue, but have been disappointed.

## PROGRESS OF THE COPPER INTEREST.

The copper excitement appears to be on the increase; important developments are constantly being made in almost every direction. We have gathered up the following items since our last issue:—

In Nevada county the *Transcript* learns from reliable authority that during the past four weeks upward of twenty valuable discoveries of gold and copper have been made in and around that city. There are at least one hundred men prospecting for new diggings within two or three miles of the place. A new lead has been discovered about fifteen miles from the city, and a company of one hundred men has been formed for the purpose of working it.

The *Democrat* states that Mr. R. S. Whigham, formerly of Nevada, but now a resident of the Southern part of the State, was in that city looking after a copper mine which he discovered in 1852, and which assayed 30 per cent. He did not consider it of any value then.

A correspondent of the *Daily Herald*, writes to that paper a highly encouraging account of the progress of the newly discovered mines of copper in the neighborhood of Crescent City, Del Norte county, from which we condense as follows:—

THE DEL NORTE MINE shipped 1500 lbs. of ore which arrived in this city a few days since. The ore is of the variety known as the Red oxide of copper. This ore when found in large quantities, which is not often the case, is considered a very valuable ore. This shipment can be seen at the office of Messrs. Shiel & Price, 616, Market street. The portion of the vein from which it was taken is 2½ feet wide, eight feet from the surface. The prospects of this mine are highly flattering.

THE MAMMOTH COMPANY will send forward a shipment by the next steamer. This company has "struck it rich" in their tunnel, 70 feet below the surface. The vein is about two feet thick, and the ore, says the *Herald's* correspondent, "has the appearance of a rich bronze"—which would lead to the inference that it consists of "copper pyrites." This variety of ore, when it assumes a "rich bronze" appearance is usually very rich; when it appears of a paler hue it is of a poorer quality, the change in color being due to iron pyrites which are valueless in this connection.

THE ALTA COMPANY have a vein six feet wide, and fine ore. Eight men are at work getting out the ore and opening up the mine. They have now 150 tons of ore on the surface, and will have a large quantity ready for shipment early in the spring.

A new and rich copper mine has been struck near Gasquet's, Smith's River, from which excellent ore is being taken.

In Rockland District, thirty miles from Crescent City, a new mine called the "Cruikshank" has been located and the Company incorporated. Some splendid specimens of ore have been taken from it.

The "Express Company" is running a tunnel 150 feet to strike a vein which is in sight on the surface. A box of ore from this mine came down on the steamer.

A new mine has been discovered in the southern part of Del Norte county from which a large amount of native copper has been taken.

If a smelting furnace should be erected here next spring it would pay well. Such an institution is needed. There are now on the surface hundreds of tons of ore ready for use, and thousands more are coming.

In Calaveras county, there appears to be no diminution of the copper excitement. As a necessary consequence of really valuable discoveries, the lawyers have already got some of the proprietors in this county at loggerheads, and a suit has been commenced in relation to the ownership of the Copper Hill Mining Co's claim, near Campo Seco. A large number of witnesses have been summoned in the case, on both sides.

In Amador county, considerable excitement exists in and about Jackson, in consequence of new discoveries recently having been made near the Mountain Spring House. The *Amador Dispatch* says that Dr. Newton recently refused \$6,000 for his interest in one of the newly opened claims in this vicinity.

EL DORADO.—There is great excitement about Clarksville, in El Dorado county, on the Folsom and Placerville road

as rich croppings of copper have been discovered within the past week. Men from Copperopolis, owners of rich copper claims there, have come over and located claims, and now have men prospecting on them. The new comers express the opinion that the croppings are very promising.

**COPPER SHIPMENTS.**—The Clipper Ship, *Flying Eagle*, has been chartered to load with copper ore for Boston. Sixty tons of ore from Newton, Amador county, were placed on board ship *Peruvian*, a few days since, for Swansea. This shipment was made by Mr. Sheil.

## THE REESE RIVER MINES.

This new mining region, which is just now attracting much attention is located on the Overland Mail and Telegraph Route, about 70 miles South-easterly from Humboldt, and 130 miles from Carson City. The Reese River is one of the numerous class of rivers in that region which fall into a common sink with the Humboldt. Dr. VEATCH, an eminent metallurgist, well known in this city, gives it as his opinion that this is one of the richest mineral regions yet discovered.

We have been favored with the perusal of a letter recently received from that region from which we learn that the mines are being rapidly developed. The ledges, so far as assays can prove them, give indications of great richness. We dare not give the figures which are before us, although they come from sources entitled to the highest credit. The principal ledges opened thus far appear to be the "Oregon," "North Star," "Lander," the "Comet," "Highland Mary," and "Pony Ledge."

The tunnel on the Pony Ledge has been driven 180 feet. That of the Highland Mary is in 61 feet. The Comet Company are at work on their ledge and taking out what is apparently very rich rock. The Oregon and North Star are being worked with vigor. Rock from the former has been assayed and pronounced by Dr. VEATCH, richer than any other yet discovered on the Pacific Slope. The Dr. is daily expected in this city, when we hope to be placed in possession of further facts, with regard to this interesting mineral region.

The Reese River Mining Company, which is interested in fourteen different Ledges, will erect a mill here early in the Spring. The Company have plenty of wood and a good Water Privilege. This is the Company which is running the tunnel into the "Highland Mary." It is made up chiefly of San Francisco Capitalists, who have the money to put it through.

MR. F. W. CASSELL, who is soliciting for the MINING AND SCIENTIFIC PRESS, in some of the lower mining counties writes us that the new silver and copper discoveries in the neighborhood of Mokelumne Hill have created much excitement in that vicinity. Mining operations are rather dull in the districts which he has visited, just at the present, but better times are anticipated soon. We trust our mining friends will cheerfully respond to the calls of Mr. CASSELL, and allow their names to be enrolled as subscribers to the PRESS.

**INJUNCTION SUIT.**—The Yellow Jacket Company of Gold Hill Dist., Washoe, have commenced suit against G. A. Hart and others and enjoined them from working and removing ore from their claim. The plaintiffs claim twelve hundred feet of ground, and aver that the defendants have jumped and removed from a portion thereof much valuable ore, and otherwise damaged their claim, for which they ask \$10,000 damages.

**WASHOE IRONWORKS.**—Three foundries and machine shops and one boiler manufactory are in full blast in this Territory, turning out in the aggregate no insignificant amount of machinery.

**SAN FRANCISCO STOCK EXCHANGE.**—The following gentlemen have been elected officers for this association for the ensuing year:—J. B. E. Cavillier, President; J. Perry, Jr. Vice President; Franklin Lawton, Secretary; Henry Schmiedel, Treasurer.

**SHOT PROOF SHIPS.**—Within the last three years 590 plans for the construction of shot proof vessels have been submitted to the British Board of Admiralty.

## SAN FRANCISCO MINING NOTICES.

**Burning Moscow.**—Shares of this Company, in arrears for assessments will be sold at auction, Feb. 9.

**Baltimore America Consolidated.**—An assessment of 50 cents per share was levied, Jan. 5.

**Savage.**—An assessment of \$35 cents per share was levied, Jan. 7.

**Hawley.**—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

**Cole S. M. Co.**—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

**United States M. Co.**—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

**Sierra Nevada S. M. Co.** levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

**Lady Bryan.**—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

**Ida G. & S. Co. (Russ District)**—An assessment of \$1 was levied, Jan. 14.

**Henry Martin G. & S. M. Co.**—“Thomas Wallace, Trustee,” gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

**RED, WHITE AND BLUE G. & S. M. Co.** levied an assessment of 25 cents per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

An assessment of \$35 per share was levied Jan 6, payable immediately, at office, No. 712 Montgomery street.

**Iona Copper Mining Company.**—The annual meeting of Stockholders for the election of officers, will be held, Jan. 23, at office, No. 502, Montgomery street.

**Live Oak Copper Co.**—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

**Cozo Silver Mining Co.**—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

**Mina Prieta S. M. Co.**—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

**Savage Mining Co.**—The Annual Meeting of the Stockholders of this Co. will be held at Office, 712, Montgomery St. Jan. 13.

**Union G. & S. M. Co.**—The regular quarterly Meeting will be held, at Office, 410, Montgomery St., Jan. 19.

The Madison G. & S. M. Co. advertise names of parties who are in arrears for assessments, and give notice that their stock will be sold on the 29th day of Jan. unless said assessments are previously paid.

**Franco-Americano S. M. Co.**—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Galan, *President* and A. S. Gould, *Secretary*. The office of this Company has been removed to No. 528, Clay street, Room No. 2.

**Central Silver Mining Co.**—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

**Lady Bryan G. & S. M. Co.**—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

**Desert Mining Co.**—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

**Wide West Mining Co.**—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

**Reese River Mining Co.**—Ten cents per share has been levied upon the capital Stock of this Company, payable Jan. 14th.

**San Francisco S. M. Co.** have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

**Pacific Quicksilver Mining Co.**—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

**Keystone Copper Mining Co.** advertise for preposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

**Mammoth Ledge Mining Co.** give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

**Hale & Norcross S. M. Co.** have levied an assessment of \$5 per share payable on or before Jan. 26th.

**MEREDITH GOLD & SILVER MINING Co.**—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**BULLION G. & S. M. Co.**—The Stockholders are notified that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov., 21st and is now due, and payable at office 326 Clay St.

**VIBBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

**CHARLES CANY MINING Co.**—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING Co.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOTS SILVER MINING Co.**—An assessment of four dollars per share was levied on this Company, Dec. 11, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**IOWA MINING Co.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING Co.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**HAWLEY MINING Co.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING Co.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days—At the expiration of which time delinquent Stock will be sold.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

## WASHOE MINING NOTICES.

**Martin White.**—An assessment of 20 cts. a share was levied, Jan. 2.

**Oriental G. & S. M. Co.**—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and C St., Virginia City.

**Norman S. M. Co.**—Middleton & Sons, No. 40, Montgomery Block, will sell delinquent stock of this Company, February 16th.

**Baltic Mining Co.**—Notice is given of an adjourned sale of shares in this Company, to take place on the ground, Jan. 31st.

**Progress G. & S. M. Co.**—An assessment of 20 cents per foot was levied, Dec. 27, 1862, payable forthwith.

**Sweezy Co.**—Washington Ledge.—An assessment of \$10,000, being \$5½ per foot—was levied on the stock of this Company, Dec. 28, payable at the Secretary's Office, Medan Building.

**MINERS' MEETING.**—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1862, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

**Caution.**—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

**Ashland Co.**—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

**Eldorado G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

**La-Plata Oro Co.**—Gold Hill District.—An assessment of two dollars per share was levied, Dec. 26, payable at once,

at Office of the Secretary, Court-house Building, Virginia City.

**Texas Co.**—Tennessee Ledge.—An assessment of 25 cts. per foot was levied, Dec. 22, payable on or before Jan. 21, 1863.

The Regular meeting of the Company for election of officers, will be held at the Comet Saloon, Virginia City, on Saturday, Jan. 21.

The North American Co., Gold Hill, will sell at auction Jan. 31, stock of shareholders delinquent in payment of assessments.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

**THE SWEENEY Co.**, Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Mitchell.

**COLEDONIA TUNNEL AND MINING Co.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK Co.**, lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Bach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

**LA CROSSE MINING Co.**—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

**HAWK EYE SILVER MINING Co.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**MOBERGAN Co.**, Cedar Hill.—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LODE COMPANY**, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

## MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**THIRD YEAR! VOLUME VI.—NEW SERIES!**

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

**EWER & SMITH, Publishers,**

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY EVENING.....JANUARY 26, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING. Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## DISTRIBUTION OF GOLD AND SILVER.

The most productive quartz ledges or lodes, generally, are those which are the narrowest. There is a lode of tin in Cornwall, Eng. only three inches in thickness, which is very valuable; in the same vicinity there is a copper lode only six inches thick, which is more profitable than one twenty feet thick in the same hill. The famous Copper Falls vein at Lake Superior is but 8 inches thick, and the Cliff mine 12. The richest veins in this State are generally very narrow, rarely exceeding an average of 12 or 15 inches. There are many very large veins in the State, some averaging as high as 10, and even 15 and 20 feet in thickness. Were this class of veins to pay as much to the ton as the smaller ones do, the profits on them would be so enormous as in a short time to so augment the product of gold as to seriously affect its comparative value.

Gold and silver form the chief basis of the circulating medium, and Providence seems to have so ordered their distribution throughout the globe, as to require about the same amount of labor for production, in one place as another. Were it otherwise, incalculable mischief would result to the monetary affairs of the world.

Gold is the most universally and evenly diffused of all metals known to man. Its supply must have been purposely ordered for the very object for which it is principally used. Those portions of the earth which were first peopled by man contain but limited supplies. The wants of man in those days did not require a large supply. Commerce was scarcely known, and the little that was carried on was chiefly in barter which did not require a large circulating medium. As man increased on the earth, and as artificial wants grew up, commerce was called into being to supply those wants. A material for a circulating medium was needed, and it was found in the distant regions whither the new conditions of society led man in his travels and enterprise. The ancient Ophir, wherever it may have been, furnished the material, which was called for by the sudden rise of commerce in the days of Phœnician glory.

Phœnicia went down, and with it the commercial enterprise of the period. The wars and conquests which destroyed the peaceful and elevating pursuits of those days were succeeded by the dark ages. When the light of civilization again began to dawn, Columbus introduced to the world another Ophir, in the central portions of the American continent, from which the increased demands of commerce were once more supplied.

Years and centuries rolled on, and the nations had again become in a measure torpid. With the dawn of the present century, a new commercial era was introduced. The Arts, Sciences and Commerce were advancing with rapid strides, and men began to be in want of another increase to the circulating medium. The first resort was to an imaginary basis. The commercial world were relying upon a paper medium from the sheer necessity of the case. The activity of the times pushed a few pioneers of the "progressive race" to the western shores of our continent, and here, in the mountains of California, was again found the needed supply

which the wants of the age so imperiously demanded. The false basis which necessity had so recently created began gradually to disappear and its place to be supplied by a legitimate substitute.

Thus the means seem to be most wonderfully adapted to the end. From the earliest discovery of this universal medium, it has been found in almost precisely the same conditions. About the same amount of labor is required to produce it now as at its first introduction into commerce, and it occurs in about the same quantities both in its ores and in its placers. May we not see in all this the hand of Providence adapting the means to the end? It is idle to talk of monetary derangements growing out of the increased supply of gold. Gold is the great agent which God has furnished man, wherewith to meet the necessities of the race in supplying the artificial wants to which he is now, and will continue to be, more and more subject in his onward progress to social perfection. It will ever be found exactly adapted to the end. God's works and laws are always perfect.

## BRITISH MINES.

In another column we have given the total yield of the mines of Great Britain for the year 1861. On carefully analyzing these figures we arrive at the following facts with regard to the average richness of the mines of that country and the cost of extracting the mineral from several of their ores:—

**TIN.**—The average yield of the tin ore for 1861 was \$375 per ton. The cost of reducing the same appears to have been \$76 36 per ton; but we are inclined to think there must have been a discrepancy between the number of tons produced and the number worked which makes the cost of working appear much larger than it really is.

**COPPER.**—The average yield of copper ore was \$32 60 per ton.

**LEAD.**—The yield of lead ore was \$76 48; the ore being reduced at an expense of \$16 34 to the ton.

**SILVER.**—Only 29 tons of silver ore were raised, which yielded an average of \$243 44 to the ton. We do not learn from what locality this ore was obtained, nor have we the data from which to calculate the cost of its extraction from the ore.

**ZINC.**—The yield of zinc ore was \$24 to the ton, which was worked at an expense of \$14 61 to the ton.

**THE YIELD.**—Gov. Pickering estimates yield of the Washington Territory gold mines for the last year [1862] at from \$8,000,000 to \$10,000,000.

It is from such mistaken and reckless "estimates" as the above that the Land Commissioner founded his estimates, for the immense revenue which he told the country, in his late report, might be derived from the mines of the Pacific Coast. Instead of Washington Territory yielding eight or ten millions of dollars the past year, the entire North Coast, including all British Columbia, scarcely yielded the half of that amount. We append the figures, derived from facts not estimates:—

The total amount of treasure received in San Francisco from the entire North Coast during the year 1862, as derived from official sources, was \$4,931,579. The amount shipped from the Port of Victoria to San Francisco by Wells, Fargo and other public shippers was \$2,167,188; thus leaving a balance of only \$2,764,386 as the yield of Washington Territory and Oregon. The amount forwarded by private hands would scarcely increase that sum to \$3,000,000—or one third the amount estimated by Governor Pickering. Statistics to be valuable should be correct. We can see no good to be derived from an over estimate of our treasure products; facts are what the people want, and all they need—more than that is fraught only with mischief.

**SINGULAR DEVELOPMENT.**—The Territorial Enterprise in its Stock Remarks of Monday last says that several Companies in Gold Hill have struck very rich rock by drifting to the Eastward, at what depth is not stated. Where this rock is struck, the ledge is found pitching to the East. This ledge, it will be recollected, has hitherto been found pitching to the West. It is possible that the miners have just reached the true vein; at all events claims have considerably advanced in the estimation of the present holders, and higher rates are asked than prior to the discovery.

## SAVING SILVER AND GOLD.

It is generally conceded that a large loss of mineral occurs in working gold or silver ores in the slum, or muddy water drained off from the vats which receive the sands from the batteries.

O. W. Easton, of Virginia City, a gentleman of much experience in reference to this loss, makes the following suggestions in the Virginia City Union:—

We all know that in the working of gold ores in California by stamping and grinding, the quicksilver is knocked and ground into spray-silver, so called. Such is to a great extent the condition of a large portion of quicksilver, whether used in the pans with the pulps, or in the barrels in the Friberg process. Thus fine silver, which is not collected, carries off the small portion of metal liberated from the rich Comstock as well as other ores; and a simple mechanical means whereby the silver spray and fine amalgam could be saved, is the grand desideratum I propose that the tailings should be riddled by passing them through copper wire cloth sieves, which have first been electro-plated. The pulp and all the water, with clear water added to liquify the mass thoroughly, should be run over and through a succession of these sieves, the effect of which would probably be to pick out from the mass—by the affinity of the metallic silver on the wire for the silver in the pulp whether as spray, quicksilver or fine amalgam—all the metal now lost. As collected it would fall in globules with the tailings to be saved by quicksilver in rifles placed in the sluice boxes, it having collected in particles large enough to have an appreciable specific gravity. The tailings can be repeatedly riddled as they run, without any labor or attention. The mass must be distributed very thin. Experiment must determine the size of the meshes of the wire cloth. The tailings can be distributed by buttons as in the German sweep tables.

The above is a most excellent and practical suggestion, and could scarcely fail to prove remunerative.

The "wire cloth sieves" to be used for the above purpose, should be "electro-plated" with gold—silver, however, might possibly answer. If sieves of copper or brass wire were used, the abrasion of the sands and the penetrative character of the quicksilver would soon destroy the wire.

In addition to the above we would suggest another plan, which we believe has in part been adopted by some mills.

Instead of the shoal vat in general use let a deeper one be constructed, even if it be of smaller superficies, and immediately over this vat construct an apparatus of the same superficial measurement from which a constant shower bath (a very light one will answer) of cold water may be discharged upon the slum. This cold water shower has an almost instantaneous effect upon the "spray-silver," so called, collecting and condensing the same into globules which readily settle, and thus, with the gold and silver which they contain, become fixed in the sands at the bottom of the vat. Every mill Superintendent is aware that by nearly or quite all the processes ordinarily employed, a large amount of quicksilver is lost, the loss from retorting accounting for but a small portion thereof. This quicksilver thus lost, mostly passes off in the condition alluded to by Mr. Easton; and "that's what's the matter," or the reason, in a large majority of cases, why the rock don't pay. When triturating pans are used, through which a flow of water is allowed for some time previous to the final "clean up," the loss from this source is very large. The employment of the shower bath over the vats, the placing a series of wire sieves, in addition, as suggested by Mr. Easton, and the use of Wheeler's "Separator"—a machine illustrated in the Press of January 12th—for cleaning up, will, we believe, render valuable a large class of veins now deemed entirely unproductive. The two former appliances are exceedingly cheap and simple; and the shower bath will require but a little water. It need not fall much faster than it does in a pretty smart summer shower. The "Separator" is not an expensive machine, and we would advise every quartz miner, visiting the city to call at the Miners' Foundry and see the machine at work.

Every month and almost every day our miners learn something new, and each access of experience, or practical suggestion, made public, adds to the general fund of knowledge and the aggregate yield of our mines. The object of this journal is to establish a general medium of communication among miners, by which information of this character may be speedily and conveniently disseminated among those interested; and it will at all times afford us pleasure to lay before our readers any new ideas or practical suggestions which may for from time to time come up among those engaged in the difficult and intricate art of separating gold and silver from their ores, or mining for those ores in the bowels of the earth.

## GENERAL MINING STOCK REPORT.

**REPORT OF SALES**  
At the San Francisco Mining Stock Board,  
For the week ending January 24, 1863.

Names of Companies.	Total No. Shares.	Shares per ft.	Par Value.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

\* 4 shares to 1 foot.      † New Stock.

## Coso Stocks.

The Josephine changed hands at the Stock Board, on Monday at \$16, on Tuesday at 16; on Wednesday 16, on Thursday at 16, on Friday at 16. Coso—changed hands on Thursday at 10 dollars. Willow Springs—sold on Tuesday at \$20.

## Mexican Mines.

Mina Prieta finds no recent buyers, but is held at \$140. Dios Padre was quoted on Tuesday and Thursday at \$33, on Friday at 30.

SAN FRANCISCO, Jan. 26th, 1863.

## STOCK REMARKS.

The mining stock transactions of the past week have been unusually large, and probably embrace a wider range of stocks than has ever before been noticed in the market. We quote for the week, sales in 33 different companies; mostly at prices which show a decided improvement over any similar period. These facts augur well for the favorable progress of our mining interest, and indicate such a tone of confidence among our own capitalists who seek high percentages, as cannot fail to operate most favorably in attracting hither foreign capital, which is satisfied with much lower percentages whenever safe investments are offered.

The peculiar sensitiveness of Ophir stock has again been most remarkably manifested. We quote in a range from \$1600 to \$2650! It sold early on Monday at \$2600 and on Wednesday was quoted at the Stock Board at \$1800—a decline of \$1050 in three days! The ostensible reason of the decline was one which, in the mind of an experienced miner, would not affect the stock to the value of two per cent.

Gould & Curry still continues in demand at advanced rates. The advance is attributable to the demand for the stock, which greatly exceeds the quantity offered. Speculation in the January dividends is still indulged in. Dividends to the foot, monthly for one year were sold for \$80 on Friday, and \$90 was offered on Saturday. \$92½ was freely offered for the January dividend.

Savage is still advancing; shares having gone up \$250 during the week. Their advance to \$200 on 60 days is confidently predicted.

Chollar and Potosi remain at about last quotations, with a very slight advance. Buyers will probably hold shy of both until the result of the pending suit is announced.

Norton, which was in demand, a week ago, at greatly advanced rates, has not sustained itself during the past week; buyers are waiting further developments with regard to the "rich strike."

Danby has advanced \$40 per foot over last quotations. Still further advances in this stock may be looked for, as it will soon become a dividend paying institution. The company's mill is nearly ready to start, and a large supply of good ore awaits its completion.

## ESMERALDA STOCKS.

Considerable confidence is beginning to be manifested in Esmeralda stocks which are able to pass the ordeal of the "Esmeralda Board." While that institution, as now managed, will doubtless exert a beneficial influence on legitimate stock operations, it cannot be otherwise than detrimental to the development of new mines. It is advantageous for San Francisco but the reverse for Esmeralda.

Wide West has declined a little in consequence of the injunction of the Dimes Company. Holders should not be alarmed as that suit will scarcely reach the dignity of "a tempest in a tea-pot" affair.

## TRANSACTIONS IN SHARES. \*

Ophir—60 shares at \$2,100 per foot; 120 at 2,050, 60 at 2,150; 36 at 2,250 60 at 2,250; 60 at 2,400; 60 at 2,500, 60 days; 60 at 2,650; 138 at 2,250; 120 2,650; 6 at 2,200; 24 at 2,175; 98 at 2,100; 18 at 2,400; 120 at 2,550; 360 at 2,150 Gould & Curry—6 at \$3,100; 40 at 3,100; 12 at 3,050, 40 at \$3,100; 16

3,125; 20 at \$3,250, 60 days; 80 at 3,200; 40 at \$3,250; 20 at 3070; 60 at 3,075 Chollar—20 at \$390; 20 at 395; 40 at 390; 20 at 400, 32 at 397½; 28 at 400 Savage—10 at \$1,150; 5 at 1,125; 5 at 1,150; 10 at \$1,250, buyer 50 days; 5 at 1,220, 5 at 1,225; 5 at 1,200 5 at 1,160. ## ESMERALDA STOCK REPORT.

At the meeting of the Esmeralda Stock Board, held January 9th, 1863, the following business was transacted in stocks, as reported in the Esmeralda Star.

Rodie Bluff Consolidation—50 feet offered at \$10; bid 6, cash.  
Peru (two feet to the share)—25 shares offered at \$8.  
10 shares Garibaldi withdrawn.  
One-thirtieth interest in the Nevada Tunnel withdrawn.  
Heath—10 shares offered at \$10.  
Falls of Clyde—100 shares offered at \$5.  
St. Louis—\$12 bid; no stock offered.  
Hanover—20 shares offered at \$25; bid 12.  
Live Yankee—25 shares offered at \$10; bid 8.  
Nevada—25 shares offered at \$10.  
Del Monte—12 shares offered at \$20; bid 15.  
Pride of Antelope—25 shares offered at \$5.  
Union Tunnel—10 shares offered at \$15.  
Alturus—10 shares offered at \$15.

## Esmeralda stocks offered at San Francisco Valuation—

Antelope offered at	.....\$100 00	Wide West offered at	.....\$300 00
Garibaldi	.....23 00	Utah offered at	.....30 00
Main Esmeralda	.....45 00	Yuma	.....8 00
Silver Hill offered at	.....15 00		

Published by order of the Board. J. B. BLANCHARD, Sec.

At a meeting of the Board, held January 16th, 1863, the following stocks were offered

Pride of Antelope—25 shares offered at \$5.  
Union Tunnel—10 shares offered at \$15.  
Alturus—5 shares offered at 25.  
Bamboo—20 feet offered at 75—bid 60.  
Strawberry—25 shares offered at 16—bid 8.  
Ex. Johnson—100 feet offered at 8.  
Freno—25 feet offered at 8.  
Del Norte—12 shares offered at 36.

## Esmeralda Stocks offered at San Francisco valuation:

Antelope	.....offered at \$225 00	Wide West	.....offered at \$410 00
Garibaldi	....." 16 00	Main Esmeralda	....." 45 00

Silver Hill	.....	20 00	Utah	.....	45 00
Yuma	.....	8 00	Real Del Monte	.....	25 00

## TRANSACTIONS OF THE WEEK.

240 feet of Bamboo sold at \$40 per foot.  
65 shares Strawberry sold at \$10 per share.  
100 feet Golden Age at \$5 per foot.  
25 shares Peru, at \$5 each.  
20 feet Bodie Bluff Consolidation, at \$12.

Application for Examination and Classification was received from the following Companies:—Garibaldi, Ural and Julia Elizabeth  
J. B. BLANCHARD, Secretary.

## WASHOE STOCK REPORT.

[COMPILED FROM THE DAILY TERRITORIAL ENTERPRISE.]

Monday, Jan. 12.—The Flowery Hill Company, Summit District, it is said afford indications of a good ledge. The work of prospecting is being diligently prosecuted, and many outsiders are watching the result with much interest, as indicative of what may be expected from other mines in the district. The Hale & Norcross Company have placed their mine in good condition for working, and, at last accounts, were about ready to commence taking out rock. Their hoisting machinery is driven by a 15-horse power engine. The Pride of Washoe Company have started a tunnel to strike their ledge at a depth of 75 or 100 feet. Their ledge is about 17 feet in width at the surface, and prospects well in both gold and silver.

The stock operations, for to-day have been limited and unimportant, tho' much enquiry has been made for claims at figures slightly below the prices asked. Two lots of fifteen and ten feet each in the Wellington Company sold at rates not desired to be made public. Fifteen feet of Birdsell sold at \$16. Twenty-five feet of Walker & Co. sold at low rates.

Tuesday, Jan. 13.—The La Crosse Company have entered into two several contracts with responsible parties for the raising of 4000 tons of ore, the contractors furnishing their own engine and other machinery. Transactions in stocks have been light to-day. Two sales, of 5 and 10 feet in the La Crosse are reported at an advance on last quotations. The development of a suit between the Yellow Jacket and the Union and Laboring Companies at Gold Hill, has thrown some stock in all these companies into the market at reduced figures, but the demand is almost equal to the supply. Twelve feet of Birdsell sold at \$17, and 6 feet at \$17 50; eight feet of Allen at 46; 10 feet Fairview at 20. 25 foot Gay, at \$3 50.

Wednesday, Jan. 14.—Transactions light, to-day. The high rates of first class stocks in San Francisco have caused a general firmness, and good ground was sparingly offered. Baltic was quoted to-day at 17½ and Zouave at 8 dollars per foot. Prices remain substantially as yesterday and the day before.

Thursday, Jan. 15.—Considerable activity was manifested in stocks to-day, though but few sales were effected. Inquiry was made for several stocks which have been for some time entirely out of demand. There will no doubt be greater activity in stocks in future, than during the past Fall or Winter. The developments made during the last few weeks in the various claims of this and Gold Hill districts seem to have given renewed confidence in the richness and permanency of the mines of Washoe. The Norton Company made a rich strike to-day, the same which caused the sudden advance of that stock in the San Francisco market a week since. The Oriental, at Gold Hill, is said to have struck a ledge which has the appearance of being valuable. The ledge has been penetrated with a tunnel about 6 feet, but has not yet reached the opposite side. This Company was formed for the purpose of running a tunnel of great and indefinite length into the hill west of town. They claim several ledges on the line of the tunnel.

Sacramento is in demand and saleable at \$35 per foot. This Company has commenced operations on their lower tunnel, with good results, which probably does much for the better repute of their stock. Some inquiry is made for La Crosse, for which \$17 is offered. The evident approach of a lawsuit appears to have brought the stock of this Company into more favorable notice. Inquiry is made for U. S. Tunnel stock. It can be sold at low rates. Cedar Hill Tunnel is without demand. Several important sales have taken place to-day.

Friday, January 16.—There is some demand for claims not prominent in the market, but generally at lower rates than holders are willing to accept. Those only who are in pressing want of money will accede to the terms of the buyers—consequently few transfers are noted.

Sacramento is in demand at \$40, a material advance over last quotations; but little, however, appears in the market at any price. Ten feet sold to-day at 40. Beach Paxton are taking out some fine looking rock. Their stock appears to be entirely withdrawn from the market; \$30 is offered without finding sellers. The Flowery Hill Co., alluded to on Monday have struck ground in their tunnel which indicates a near approach to their ledge. The Yellow Jacket has enjoined the Union and Laboring Companies from further operations on their claims. The Birdsell Company have attained a depth of 150 feet from the bottom of their shaft and are about to strike their ledge at that depth. Nine feet of this stock sold at \$20 per foot.

Some 300 of Yolo have changed hands at rates which are not made public. The stock is in great demand at low rates.

Saturday, Jan. 17.—There was some enquiry, to-day, for Sacramento at \$40; Beach & Paxton at 25 to 30; for La Crosse at 16 to 17, and for Birdsell at the same figures. Prices same as last quotations. The business of the day has been light.

## HUMBOLDT STOCK.

A small sale of Humboldt stock was effected in Virginia City on the 16th instant at low rates in several claims at an average of \$3 per foot. Considerable stock still remains in the market. Accounts from this district according to the Territorial Enterprise are somewhat less satisfactory than the predictions of six months since had warranted. One or two mills commenced operations there a few weeks since, and the returns from the ores of a number of the ledges was quite meagre. In one instance where the assays had engendered large expectations, nothing more precious than lead and antimony was obtained from a crushing of ten tons of rock. Before spring opens three mills will be in operation in the Humboldt region and the value of the mines there will be in a measure settled. Assays amount to but little in arriving at the actual value of a mine.

## California Copper Mines—Practical Suggestions.

EDITOR OF MINING AND SCIENTIFIC PRESS.—Sir:—Having noticed some time past, through the medium of your journal, that while the capitalists of this State, especially those of San Francisco, are deeply engaged in the gold and silver mines of Washoe, and other places, and that they are also turning their attention to the development of the copper lodes, in various places and throughout this State, and having had several years experience in the working of such, in the mines of Cornwall, Eng., I beg you will give insertion to the following remarks and suggestions which I have thought proper to hand you for the perusal of your readers.

The mineral indications, from what I have seen and heard in this country, far surpass in value and extent those of England; so much so, that where the latter have only a few colors and those at a considerable depth, you have paying rock from the word go, and in some instances, in very respectable quantities; consequently with proper and judicious management, the copper lodes of California must, ere long, figure most prominently, and will most undoubtedly prove to be highly remunerative to the speculators, whilst those of England to the first, second, and in some cases to the third parties, proved a failure, but little or no copper being found till at the depth of two or three hundred feet, consequently many mines were abandoned, leaving immense riches still at a greater depth. With these facts in mind, the speculator here may think himself blessed; for in comparison with the "Old Country," he can not only see but feel his way. This the most skeptical must admit, for we have the ore, in many instances, sticking out at the surface, and with practical men as managers, such mines must prove to be of the first order, and unquestionably good.

As a Superintendent of Copper Mines, I have had several years practice in Cornwall, and would recommend to those engaged in such in this Country, strict adherence to the keeping of the Working Plan, it being, according to my ideas, a desideratum of the greatest importance to both Company and Agent, however competent the latter may be. For instance, a Working Plan shows him, at a glance, the exact position of the different points of operation, and whether the bearings of the levels above, and below correspond, and likewise the distance of underlie between the same. In many instances where the Superintendent has not the assistance of this, the productive part of the Lode has been lost, caused by a "split off," the same being so minute at the separation, as not to be noticed; for where this occurs, there is generally a change in its bearing, but, of so little a moment, as not to be perceived. When laid down on paper, however, it becomes apparent, and puts the agent on his guard. He examines the point referred to, and in many instances I have witnessed a branch, scarcely discernable, to have left the main vein, which, on opening, only a few feet, has increased in size from three to six feet thick, and this the productive part of the Lode. In all cases where branches or spurs are intersecting the main part, they should be shown with the bearings, etc., on the Plan, so as to give the Agent, and also the buyer, and seller, an idea where to expect an improvement, or at least, the junction of the same on the levels above, or below; for in most cases it does benefit the concern.

There are many other desirable objects gained by due attention to said Working Plan, such as the extent and bearings of the different strata of ground in which the Lode is imbedded, whether highly metalliferous or otherwise. Also the junction of different strata, and whether lengthening in depth or not; for as a tree derives its fruitfulness from the soil on which it grows, so does a Lode, or Ledger, with gold, silver, or copper, from the stratum of ground in which is imbedded. Yours Truly, MINER.

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
" from 300-1000ths. to 750-1000ths fine. 7cts " "  
" " 750-1000ths to 950-1000ths " 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
301 " 500, 7cts, " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPDIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skillful and generous of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

## THE EYES! THE EYES!! THE EYES!!!

## DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

Regarding Patents.

We desire to call the attention of all those who intend applying for Patents, to our superior facilities for obtaining the same. Our arrangements are such that we can have all the papers prepared, transmitted and returned, with the Patent right, in three months from the time the applicant places the matter into our hands; thus saving at least three months delay.

The expense to the applicant would be rather less, if the business be done by us, than if the papers were sent to New York or Washington.

Thus by patronizing a home institution, our inventive citizens can save both time and money.

We have prompt, intelligent and reliable agents in the city of Washington who attend punctually to all Patent business sent to them. We have agents, also, at London, Paris, Brussels, Hamburg, St. Petersburg, Berlin, Vienna, and other European capitals.

**RECENT PATENTS**—Granted to CALIFORNIA INVENTORS through the Pacific Patent Agency.

**HERMAN CAMP**,—Patent for Quartz Crusher and Amalgamator.

**W. H. RICHARDSON**—Patent granted for *Washing Machine*.

**E. E. MATTESON**, Nevada: *Hydraulic Derrick*. This invention has been illustrated in this journal, and has obtained great celebrity throughout the State.

**ELANDER HEATH**, San Francisco: *Spiral Spice and Sage Mill*. See "Mining and Scientific Press," June 9th, 1862, Vol. V., No. XIII.

**G. F. DEETKEN**, formerly of Nevada: *Apparatus for separating Gold from Pyrites*. This is one of the most useful inventions of the day. Mr. Deetken has successfully worked sulphurets for a number of years in Nevada county, professes to have obtained greater results than others engaged in the same occupation. Mr. D. has recently established himself in this County, on the San Bruno Road, near the Islais Creek, where he has erected chemical and metallurgical works.

LATEST IMPROVEMENT

In LADIES' BUCKLES.

**MR. REICHEL** RESPECTFULLY ANNOUNCES TO THE LADIES OF THIS State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at our address,  
**FREDERICK REICHEL**,  
Manufacturing Jeweler,  
620 Merchant street, San Francisco.

REMOVAL.

**OFFICE OF THE PACIFIC METALLURGICAL WORKS** is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

**COPPER OBES**—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent,  
my30 318 California street, near Sansome, up stairs.

WRIGHT'S PICKS.

**JOHN WRIGHT**, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. Pick EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 511 Market street,  
je20 Opposite Battery, San Francisco.

LABOR-SAVING

Rock Drilling Machines.

**TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE AND QUARRYMEN.** The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders, for

HAND, HORSE, AND

STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way. A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process.

Address orders to

Dr. Van Zandt,

Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity! Made Subservient for the Cure of all Nervous and Spinal Diseases.

**THAT THIS PRINCIPLE**, successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanting by physicians, to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle, and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting, and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct view, and should the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assign those silent complainings which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wanted tonicity of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or coelestic habit of body.

None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you of a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these affections an especial study, and that he is the only Surgeon in our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Office—Corner of Washington and Sansome streets.

FREDERICK KESMODEL,

Cutler and Surgical Instrument Maker

517 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,

Inventor and Patentee

## 50 lbs. MARINE AND

## Fire-Proof Paint,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

## THE FLOOD IN THE OPHIR.

The "Local" of the Territorial *Enterprise*, in the issue of January 21st, gives a particular account of the recent influx of water into the Ophir and Mexican Mines, in Virginia City, from which we condense, as follows:—

The water was struck in the Ophir about noon on Sunday the 15th inst. Some hands were working in a western drift, and upon striking their picks through the clay casing of a ledge, (the Virginia, probably) a thirty-five or forty-inch stream of water burst forth. It is said that the men had to drop everything and run for their lives—it was no time to fool away precious moments in trying to lug their tools away with them. Although the Ophir and Spanish join each other, the men in the latter did not know of the accident which had befallen their neighbors until some four hours after its occurrence. This threw the Spanish folks somewhat behindhand in preparing against the trouble so soon to come upon them.

The stream, at the time of the visit, some 50 hours after the water had burst in, was still some 25 to 30 inches. It had then formed a kind of subterranean lake about 21 feet deep by 30 in width and 100 in length, and was still rising, in spite of the utmost efforts of the pumps to keep it down, of course all mining operations were at once suspended and a force of about 80 men set to work putting in extra timbering to secure the mine from caving when its sides above the then water mark should be submerged.

**ORE TESTS.**—Several inquiries have been made to us of the different chemical tests that will discover traces of silver and copper in the rock. If our friends who are conversant with this matter will forward information respecting such chemical tests to us, we will be happy to give them publicity. [*Amador Ledger.*]

Persons interested in the above will find the desired information, and much more in the same connection, all valuable to copper and silver prospectors, in late numbers of this paper. A remittance of six months or a years subscription to the MINING AND SCIENTIFIC PRESS, will afford them all the valuable information obtainable from books in relation to prospecting for either silver or copper, and assaying and testing ores of the same. The dissemination of that class of information is the speciality to which this paper is devoted, and no mineral prospector in the silver and copper regions of California can invest \$4 to better advantage than by sending the same to this office and becoming a subscriber and reader of the Press. We shall be extremely happy to receive the names of all who may favor us with cash patronage. We also pledge ourselves at the expiration of the year to refund to any party double the amount of his subscription, who may honestly think he has not got the worth of his money in valuable information from our columns.

**A LONG AND EXPENSIVE TUNNEL.**—According to the *Butte Record*, the Eureka Tunnel Company having succeeded in running their tunnel through the rim-rock, on Table Mountain, [near Oroville] commenced washing on 5th January. This tunnel, we believe, is about 2,000 feet long (through hard rock) and has taken nearly seven years to complete

## COAL.

The coal mining interest of California is beginning to assume an aspect of no inconsiderable importance. Although the coals hitherto produced are generally of an inferior quality, the indications, in several localities, are such as fully warrant us in expecting great improvements in this particular as the excavations grow deeper. The Healsburg Coal Mining Company in Sonoma county, are so well satisfied that such a result may be expected, that they have decided to sink their main shaft, 7 by 3½ feet in size, (which is now down about 65 feet) to a depth of two hundred feet. The work in this mine is being pushed forward with energy. The coal now being taken from this mine finds a ready market in this city, at \$12 per ton.

The Folsom Company, whose mine is a recent discovery, have gone down some 15 feet in the ledge, the coal improving in quality as they descend. The mine is located on the American river, about six miles below Folsom. According to the *Telegraph*, printed at Folsom, the owners are greatly elated with the discovery.

**PROSPECTING FOR COAL IN THE MOUNTAINS.**—A shaft is now being sunk for coal at a point about two miles west of the Half-way House, Carson road from Placerville. Large quantities of a substance resembling lignite, and sufficiently carbonaceous to burn under the blow-pipe, have been found at that place. The parties engaged mostly reside in Carson.

**COAL IN TULARE COUNTY.**—A seam of coal was recently discovered, in the vicinity of the Slate Range, District, in the Southern part of the State. The seam, where it crops out, says the *Visalia Delta*, is four feet thick, and the coal, even from the top, burns freely, giving out a great deal of heat. That paper thinks it is what is called "soft coal" in the Eastern markets. The location is some 18 miles from the Morrow lead, in a southwest direction, with a level country intervening. The effect of this discovery has been to advance the price of every foot of ground in Slate Range 500 per cent. more than it was a week ago. The lucky discoverer himself will undoubtedly realize a fortune.

**COAL.**—England produces from her island mines more coal than any other nation; and yet the coal mines of the United States cover a greater area, in square miles, than the whole area of the British islands.

The auriferous and argentiferous lands of the United States, and those solely on the Pacific coast, are greater in extent than three such kingdoms as Great Britain and Ireland together.

**STRETCHING A POINT.**—Commissioner Boutwell, in addition to other taxes on publishers, has decided that they must take out licenses as "dealers"—because they sell papers to newsboys. What next!

A RAILWAY has been completed across the Pyrenees. The road has been constructed at a cost of about \$12,000,000. It has been built, exclusively, with Spanish capital. The maximum grade is 76 feet to the mile.

## DESTROYING IRON-CLADS AND OTHER WAR VESSELS.

Some two or three months since it was announced that Mr. Whittaker, an engineer on board the U. S. Sloop of War, *Kearsage*, had devised a plan for destroying iron clads and other vessels of war, which appeared so practicable and of such national importance, that the engineer was immediately dispatched from his post to Washington, to communicate directly with the Federal authorities in that city. It is now still more apparent that there is something in the alleged discovery; at all events, the plan is to be tested as appears from the following:—

The iron-clad steamer *Ozark*, 2, now in course of construction at Mound City, eight miles above Cairo, Ill., is about 110 feet in length, will have four propellers, and a turret, twenty feet in diameter, for two large guns. The boilers are in and the armor put on for about sixty feet on both sides. First Assistant Engineer James W. Whittaker is examining the vessel, with a view to apply his new invention for the destruction of iron-clad boats of all kinds, having been ordered there by the Secretary of the Navy for that purpose. It would not be proper to explain what the nature of this invention is; suffice it to say that Mr. Whittaker has letters from chief engineers in our navy and other scientific men, including Captain Ericsson's principal engineer, wherein they express their utmost confidence in the plan, and recommend a trial speedily. Commander Porter is said to be highly delighted with it, and gratified that he is to have the first opportunity of testing it.

## LAKE SUPERIOR COPPER PRODUCT.

The Lake Superior *Miner* sums up the probable yield of the Lake Superior Copper District, for 1862 as follows:— "As intimated last week, our mines did better the past season than any one supposed they would. The shipments of mineral are larger, and the percentage will certainly compare favorably with any past year. Estimating the mineral in round numbers at 2,700 tons, and its percentage at 70, and we shall realize 1,890 tons of ingots from the year's productions. This metal, at the last market quotations, was worth 33 cents per lb. or \$660 per ton, and allowing the \$60 to cover freight, insurance, and smelting charges, and we have the present net value of the year's production, 1,890 tons of metal, @ \$600 per ton, \$1,134,000. This is of course many thousands of dollars more than will be realized on sales, as much was disposed of at lower figures. According to the best data we now have, the mineral shipped from the lake the past season, will not exceed 7,000 tons of ingot copper, the sales of which, past and future, will doubtless average higher than last year. The amount realized from the crop of 1861, has, we believe, generally been estimated at \$3,500,000, which is not too high for 1862.

**SILVER IN NOVA SCOTIA.**—A letter from Nova Scotia states that, in prospecting for gold in the northern and eastern portions of the province, the writer found silver, as well as gold, in great abundance; that in every panful of earth washed from the stream he found pure metal; and veins of spar containing native silver traverse the mountains on each side of the river, and are exposed at some points along the sea-shore.

## NEW MINING AND COLONIZATION ENTERPRISE.

Some months since an association of gentlemen in this city, dispatched two Agents to Lower California, for the purpose of selecting some suitable locality in that country, for establishing an American Colony for Agriculture and Mining purposes. One of these gentlemen was intimately acquainted with the Spanish-Mexican character and spoke the Spanish language. They started upon their mission, and spent several weeks in exploring that region under the escort of a Mexican Guide, and at last selected a location known as the Llanos de Musquit (plains of the Mosquito, a very valuable timber) and lying immediately between the mining district of San Antonio, Cachachili, Ranchita and Las Canoas and Vartana Bay, at which latter point a site has been selected. The steamer Oregon, Capt. Wakeman, passes near this point on her monthly trips from San Francisco to Guymas and other Mexican ports, and will stop for passengers when requested to do so.

When the object of their mission was made known to the authorities and inhabitants, the plan met with their most hearty approval and encouragement, and a grant of 125,000 acres of rich agricultural land, embracing a valuable silver mine, was readily obtained, one of the conditions of the grant being that the grantees should introduce a certain number of settlers thereupon within a certain time. The agents having returned to this city, the Company has fully approved of their action and opened an office at North-west corner of Clay and Front streets, where full information of the plans and prospects of the association can be obtained by those who are already engaged in the enterprise, and where any others desirous of uniting with the same are requested to call. By the payment of \$200, any person who can bring to the Association satisfactory testimonials as to character, etc., can become a member thereof, and joint owner in the grant, mine, town-site, etc. The number of shares is limited to 200. All who come after, must come simply as purchasers, having no interest in the grant.

We have seen a private letter from the U. S. Consul, at La Paz, which speaks in the most favorable terms of the Enterprise, as embracing a tract of land very fertile and susceptible of easy irrigation. It produces native cotton, which grows wild to great perfection, samples of which, on the stock and on the ball, may be seen at the Company's office; where are also exhibited specimens of the ores of gold, silver, copper, etc., which abound in all the mountainous region of that country. Sugar-cane, tobacco, Indian-corn, etc., are raised there to the greatest perfection. The letter to which we have already alluded, states that the project meets with the heartiest approval of the people of that region, and that the colonists will meet with a most cordial welcome on their arrival.

All these facts and many others of importance and interest may be more fully learned by calling at the office of the Association. From the information before us we feel justified in expressing the opinion that this Enterprise is one of promise, and well worthy the attention of any one who may feel disposed to seek a change of climate and country, or who would wish to embark in any adventure which might present a fair prospect of securing an early competence from a small investment of money and labor.

The Calaveras Chronicle urges the importance of having manufactories established in the mountain regions for the purpose of making wines. It says:—

If a company were to put up a wine press and cellars in some central place in this county, it would not be many years before a sufficient quantity of grapes would be grown to afford us a constant supply. Not only our ranchmen, but the miners could each have their patch of vines, from one to five acres, and, in the aggregate, produce tons of luscious large grapes. If business men would turn their attention to making wine instead of beer, soda water, &c., we would soon have brands of California wine manufactured in the mountain towns which would vie with the most celebrated now known in the market.

SINALOA SILVER.—The Cosmopolitan, published at Mazatlan, speaks quite highly of the silver mines in the State of Sinaloa. Mr. Joseph Capprise, of this city, has recently purchased some mines in that country, which are said to be good. He brought a ton of specimens with him on the Oregon.

## VALUE OF MACHINERY IN WAR.

As the battery of the iron-clad steamer Montauk weighs thirty-five tons, it is interesting to know that her entire crew will be less than seventy men. An old frigate required a ship's company of three hundred sailors and landsmen, and a guard of marines. These would man four of the new fashioned ships, and while every 32-pounder on the frigate required the labor of 12 men, the 450-pounder of the Montauk is easily moved by four. This fact affords another remarkable illustration of the adaptedness of Yankee ingenuity to any emergency which may be presented. Without the aid of the newly invented machinery for working ship's guns, it would be utterly impossible to place such huge monsters as 450-pounders with the other necessary smaller armament, on the deck of any ordinary sized vessel, and with these the number of men and supplies which would be requisite to work guns even on the most improved principles heretofore in use.

SILVER DISCOVERY IN PENNSYLVANIA.—Quite an excitement has recently been created in Butler county, Penn., by the discovery of a silver lead on the farm of Z. Cooper, of Slippery Rock. In relation to this discovery the Pennsylvania Herald asserts that the existence of silver in this locality was known by the French during their occupation of Fort Du Quesne—Pittsburg—prior to the Revolutionary war. Crucibles and other apparatus have recently been found in the vicinity which aided the recent prospectors in their search, which has finally resulted in a re-discovery of the mine. Mining operations are to be immediately commenced and works erected for the reduction of the ores.

DISASTERS AND LOSSES AT SEA.—The number of marine disasters, which have occurred to shipping engaged in the California trade, during the year 1862, as given by the San Francisco "Mercantile Gazette and Prices Current," is 112; 41 of which have been total losses. The amount of property thus sacrificed foots up at \$6,518,189. The losses of the previous year were \$1,722,247.

BUSINESS LOSSES.—From the reports of the mercantile agencies it appears that there were fewer failures in business in the Northern States, during the year 1862, than in any other year since 1830. The following table tells its story:

	Number.	Liabilities.
Failures in 1861.....	5,935	\$178,532,170
Failures in 1862.....	1,659	23,649,300

This is a good exhibit. It is also worthy of notice that unembarrassed business firms, especially those in the cotton trade, never made money as during the past year.

PUTTY.—Notwithstanding the insignificance which usually attaches to this article of merchandise, it sometimes figures as an important item: For instance.—The Virginia City Union says the amount of putty used about the Gould & Curry mill has been enormous—not less than two tons is said to have been used in putting in lights and filling crevices, preparatory to painting, in and about that huge establishment.

LIABILITY OF CAR DRIVERS.—A case which may soon have importance in San Francisco, has recently been decided in New York, in which the Court held that children of tender years, who may be injured while upon city railroad tracks, cannot be deemed guilty of negligence. In case of injury, therefore, to such persons, the sole responsibility rests upon the driver, who, having the ability to stop the moving car, does not do so.

A PRINTER IN LUCK.—John Heckendorn, a resident of Tuolumne county, has recently discovered a quartz lead, which prospects \$879 to the ton, being rich in both gold and silver. What proportion of the lead prospects at the above rate, we are not told; but, from all accounts the vein appears to be rich, and affords a fact of rare occurrence—a printer in luck.

BEARING.—It is intimated in Washoe mining circles that the El Derado Company has been subjected to a most extensive and determined system of "bearing" during the past two or three months, and that the advertisement of the loss of 500 feet of its stock, as advertised in the Sacramento Union is an essential part of this operation.

UNSUITABLE READING FOR THE ARMY.—The Chaplain of the 2nd Massachusetts Regiment, in giving some good advice in regard to donations to the soldiers, thus humorously sketches the kind of books and tracts that worthy people send, in the ignorance of their zeal, to the camps and hospitals:—

Gifts—we come to that—are sometimes useless. I have before me a lot of tracts addressed to sellers of ardent spirits; that business is not carried on by our men. I have had a quantity addressed to distillers; but we have no distillers. And tracts to Sunday school children, on their behavior in Sunday school, which is of another meridian. And tracts to Sunday school teachers on the preparation of their lessons, or how to greet their classes, and on visiting their pupils—which is a work adapted to places where there are children. And tracts on dancing—a fault to which there is little liability—as I remember but one instance, and I was glad when that took place—on the ground, closing at tattoo. I could multiply the list, but you have specimens. What do we want of the unsaleable lumber taken from cobwebbed shelves of some institutions glad to get rid of it—but reckoning it at the usual price in their demands for more contributions? Or of bundles of worn out Sunday school books? Or of piles of volumes of some Christian truth adapted to certain states of mind, of which ten copies are enough for a year? Or of tracts attacking Catholicism, to distribute which, even by chance, would effectually destroy all influence with many men, even if a chaplain was fool enough to suppose it his business to try to make Protestants—which tracts I have carefully put into the fire?

Again, many bundles of good reading are mere heaps of duplicates of what has already been widely circulated. Societies cannot tell what has been distributed, and they glut the market with some particular work, or volumes come to be thrown away the first march.

Or works which excite only ridicule. For instance here is a little book entitled "Valuable Hints to Soldiers," is used in Cornhill. It tells what a soldier needs: A "Bible;" no he does not; he needs a Testament. A "cheap portfolio of —;" won't any other portfolio do? "A filter," of which he disengages the tube to smoke through. "Three flannel undershirts, ditto drawers, four or five pairs of woolen socks!" I wish the man who wrote this had to march the 800 miles our men have, with such a load on his back. Then it tells us that the soldier "should never sleep at night in the flannel shirt, drawers or socks worn during the day." How, when off on picket duty one night in two or three? How, when, at the close of a march he is too tired to do anything? "No one should on any account be in wet clothing." Suppose he bivouacs in the rain, as we have over and over again? Suppose he changes, and gets out again immediately? "Blankets must be aired in the morning." Of course, when up before daylight to march on, with just time enough to pack one's knapsacks. "Soup may be omitted one dinner, and beef at another." How many courses do soldiers have? They are glad enough to get one article, even if they get down to green corn, as we all did on the Rappahannock. "Never be afraid of good beef." No, nor of turtle soup or blanc mange. "An entire meal should never be made of beans." What will he eat then, when beans are the only dish? In certain cases "increasing" the quantity "of vegetables." He can't increase it, especially as two-thirds of the time in marching he does not have any. Soldiers laugh at such directions. It may be a very good book, but it does not suit the latitude of a regiment that has been out a year and a half.

A COMPANY is being formed in this city to raise trout by artificial means. They propose to create a trout pond near the Chrystal Spring House, San Mateo county, and import trout spawn from Lake Bigler.

MINING ACCIDENTS.—The mortality from accidents in coal mines may be taken as follows: In Prussia, 1.89 per 1,000 persons per annum; Belgium, 2.8; England, 4.5; Staffordshire, 7.3.

INTERIOR TREASURE MOVEMENT.—According to the Price Current, the receipts of treasure in this city, from the interior during the ten days prior to Thursday last, were about \$920,000 in uncoined treasure, and \$230,000 in coin. About \$121,000 was received from the Gould & Curry Mine.

A BIG DIVIDEND.—The dividend declared by the Gould & Curry Mining Co., on the 26th inst., is \$100 per foot, and the stock is now held at \$3,250 per foot—an enormous advance on rates sixty days since.

MINING SUIT.—The Hale & Norcross Company commenced a suit in the District Court, Virginia City, on the 17th ult. vs. the North Potosi, for possession of certain mining ground. The former suit was to quiet title—the present is for possession of a certain "drift," now held by the North Potosi Company.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

**Burning Moscow.**—Shares of this Company, in arrears or assessments will be sold at auction, Feb. 9.

**Baltimore America Consolidated.**—An assessment of 50 cents per share was levied, Jan. 5.

**Savage.**—An assessment of \$35 cents per share was levied, Jan. 7.

**Hawley.**—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

**Cole S. M. Co.**—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

**United States M. Co.**—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

**Sierra Nevada S. M. Co.** levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

**Lady Bryan.**—An assessment of 70 cts. was levied, Jan. 3, payable on or before Feb. 16.

**Ida G. & S. Co. (Russ District)**—An assessment of \$1 was levied, Jan. 14.

**Henry Martin G. & S. M. Co.**—"Thomas Wallace, Trustee," gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

**RED, WHITE AND BLUE G. & S. M. Co.** levied an assessment of 25 cts per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

An assessment of \$35 per share was levied Jan 6, payable immediately, at office, No. 712 Montgomery street.

**Iona Copper Mining Company.**—The annual meeting of Stockholders for the election of officers, will be held, Jan. 23, at office, No. 502, Montgomery street.

**Live Oak Copper Co.**—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

**Coso Silver Mining Co.**—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

**Mina Prieta S. M. Co.**—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

**Savage Mining Co.**—The Annual Meeting of the Stockholders of this Co. will be held at Office, 712, Montgomery St. Jan. 13.

**Union G. & S. M. Co.**—The regular quarterly Meeting will be held, at Office, 410, Montgomery St., Jan. 19.

**The Madison G. & S. M. Co.** advertise names of parties who are in arrears for assessments, and give notice that their stock will be sold on the 29th day of Jan. unless said assessments are previously paid.

**Franco-Americano S. M. Co.**—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Galan, *President* and A. S. Gould, *Secretary*. The office of this Company has been removed to No. 528, Clay street, Room No. 2.

**Central Silver Mining Co.**—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

**Lady Bryan G. & S. M. Co.**—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

**Desert Mining Co.**—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

**Wide West Mining Co.**—The Secretary of this Company publishes an important notice to Stockholders, in the daily papers.

**Reese River Mining Co.**—Ten cents per share has been levied upon the capital Stock of this Company, payable Jan. 14th.

**San Francisco S. M. Co.** have laid an assessment of \$25 per share, payable on or before Jan. 1st, 1863.

**Pacific Quicksilver Mining Co.**—Assessment No. 3, of \$1 per share was levied, Dec. 22, payable immediately.

**Keystone Copper Mining Co.** advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

**Mammoth Ledge Mining Co.** give notice of an assessment levied and payable on or before Jan. 13th. Also that the first annual Meeting for the election of Trustees will be held at office, Jan. 17th.

**Hale & Norcross S. M. Co.** have levied an assessment of \$5 per share payable on or before Jan. 26th.

**MEREDITH GOLD & SILVER MINING Co.**—An assessment of two and a half dollars per share (five dollars per foot) was levied by this Company, Dec. 11th, payable immediately, at office, 712 Montgomery St.

**BULLION G. & S. M. Co.**—The Stockholders are notified that they will hear something to their advantage by calling at the office of the Company, cor. Pine and Montgomery Sts.

**EMMETT G. & S. M. Co.**—An assessment of twenty-five cents per share was levied, Nov. 21st and is now due, and payable at office 326 Clay St.

**VIBBARD G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office 326 Clay St.

**DOYLE G. & S. M. Co.**—An assessment of 25 cents per share was levied, Nov. 21st, and is now due at office No. 326 Clay St.

**CHARLES CANY MINING Co.**—An assessment of \$1 50 per share was levied on the stock of this Company, Dec. 14th, 1862, payable on or before January 14th, 1863, at office, 338 Montgomery St.

**LIVE OAK COPPER MINING Co.**—Office, Montgomery Block—An assessment of thirty cents per share was levied, Dec. 1st, 1862, payable in thirty days.

**NORTH POTOSI SILVER MINING Co.**—An assessment of four dollars per share was levied on this Company, Dec. 11, 1862, payable on or before January 16th, 1863, at office, Cor. Battery & Washington Sts.

**IOWA MINING Co.**—An assessment of Four Dollars per share was levied, Dec. 4th, payable at office 522 Montgomery St. on, or before Jan. 3d, 1863.

**JOSEPHINE MINING Co.**—An assessment of two dollars per share was levied, Nov. 19th, and is now due and payable at office No. 21 Stephenson House.

**BURNSIDE S. M. Co.**—An assessment of one dollar per share was levied, Nov. 17th, payable within 30 days, at office 712 Montgomery St.

**HAWLEY MINING Co.**—An assessment of 50 cents per share was levied, Nov. 15th, payable at once, at office 204 Front St.

**AMERICAN QUICKSILVER MINING Co.**—An assessment of one dollar per share was levied, Dec. 16th, payable at Company's Office, in Petaluma, within 30 days.—At the expiration of which time delinquent stock will be sold.

**BURNING MOSCOW S. M. Co.**—An assessment of Two Dollars per share was levied, Nov. 25, for the purpose of defraying expenses of steam pump and machinery now being erected to drain the mine. Prompt payment is requested at the Company's office, corner of Montgomery and Jackson Sts., to Jos. P. Nourse, Sec.

## WASHOE MINING NOTICES.

**Martin White.**—An assessment of 20 cts. a share was levied, Jan. 2.

**Oriental G. & S. M. Co.**—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and C St., Virginia City.

**Norman S. M. Co.**—Middleton & Sons, No. 40, Montgomery Block, will sell delinquent stock of this Company, February 16th.

**Baltic Mining Co.**—Notice is given of an adjourned sale of shares in this Company, to take place off the ground, Jan. 31st.

**Progress G. & S. M. Co.**—An assessment of 20 cents per foot was levied, Dec. 27, 1862, payable forthwith.

**Sweezy Co.**—Washington Ledge.—An assessment of \$10,000, being \$5½ per foot—was levied on the stock of this Company, Dec. 28, payable at the Secretary's Office, Medan Building.

**MINERS' MEETING.**—At a meeting of the shareholders of the Siegel Mining Company, it was resolved that a meeting be called of all the miners of the Siegel Mining District, for the purpose of making laws by which said District may be governed, and that said meeting shall take place on the 15th day of January, 1862, in said Siegel District, in or near a certain place better designated as the Siegel Mining Company's Cabin.

**Caution.**—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

**Ashland Co.**—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

**Eldorado G. & S. M. Co.**—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

**La-Plata Oro Co.**—Gold Hill District.—An assessment of two dollars per share was levied, Dec. 26, payable at once,

at Office of the Secretary, Court-house Building, Virginia City.

**Texas Co.**—Tennessee Ledge.—An assessment of 25 cts per foot was levied, Dec. 22, payable on or before Jan. 21 1863.

The Regular meeting of the Company for election of officers, will be held at the Comet Saloon, Virginia City, on Saturday, Jan. 21.

The North American Co., Gold Hill, will sell at auction Jan. 31, stock of shareholders delinquent in payment of assessments.

**MARTIN WHITE MINING COMPANY.**—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City,

**THE SWEENEY Co.** Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

**POORMAN G. & S. M. Co.**—An assessment of Five Dollars per share was levied, Nov. 9th, and another of Ten Dollars per share, Nov. 21, payable at once to the Secretary, R. J. Mitchell.

**COLEDONIA TUNNEL AND MINING Co.**—An assessment of Thirty-two Dollars per share was levied, Dec. 8th, payable immediately to the Secretary, Martin White.

**THE CHIMNEY ROCK Co.**, lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

**LA CROSSE MINING Co.**—An assessment of \$1 25 per share was levied, Dec. 8th, payable at office 73 C Street, Virginia City.

**HAWK EYE SILVER MINING Co.**—An assessment of 25 cents per foot was levied, Dec. 6th, payable immediately to S. A. Kellogg, Sec. Gold Hill.

**MOHEGAN Co.** Cedar Hill.—An assessment of fifty cents per foot was levied, Dec. 5th, payable forthwith, to the Secretary at Virginia City.

**ORIENTAL G. & S. M. Co.**—The 3d assessment of 15 cents per foot, was levied, Dec. 8th, and is payable at office, No. 31, C Street, Virginia City.

## ESMERALDA MINING NOTICES.

**THE ZENOBIA LODE COMPANY**, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

## MINING AND SCIENTIFIC PRESS.

**THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.**

**THIRD YEAR! VOLUME VI.—NEW SERIES!**

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 50. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

**EWER & SMITH, Publishers,**

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY EVENING.....FEBRUARY 2, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at Fifty Cents per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING. Designs of every description—Buildings, Sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## LOOKING AFTER THE MINING INTEREST.

The Pacific Railroad Act grants to the Company constructing the road, all the timber upon certain lands lying contiguous to the route which may be selected, and which grant is so worded, that it may be construed so as to effectually prevent mining upon said lands, by prohibiting the cutting of timber, &c. In consequence of this provision in the Railroad Bill, Mr. Atkinson of Yuba, a few days since introduced the following Resolution into the Lower House of the Legislature:—

*Resolved.* By the Assembly, the Senate concurring, that our Senators in Congress be instructed and our Representatives requested to urge upon Congress the enactment of such a supplemental law as will guard the mining interests of this State against any such injurious construction of said grant.

The Resolution was referred to the Committee on Federal Relations, which has reported it back with a favorable recommendation for its passage. The Resolution came up for discussion on Tuesday. The mining delegations were generally favorable to its passage. The tenor of their argument was, that while nothing should be done by this State to discourage or delay the construction of the road, the utmost care should at the same time be taken to protect the mining interest, from whose decay the State and railroad would both suffer. If Congress did not mean, in granting to the Central Pacific Company the timber for every ten miles on alternate sections of land along the road, that it should be enjoyed to the exclusion of miners, would it not be well to say so in a Supplemental Act?

It is evident from the wording of the Bill that unless the miners are explicitly secured in the right to use what timber they may need, by such a supplementary Act, the time may come, when they would be enjoined, and the mines which may be found within the territory falling to the Railroad Company be effectually placed within their absolute control. It is not sufficient that the Company should come forward at this time and explicitly withdraw all intention to interfere with the rights of the miners. If the Company is sincere in such denial, it can have no objections to having the matter clearly defined by Legislative enactment.

P. S. Since the above was in type the Resolution has come up in its turn, as the Special Order for the day and been lost by a vote of 32 to 34.

**THE OCEAN STEAMERS.**—M. O. Roberts advertises the following vessels as belonging to his opposition line of steamers from New York to San Francisco: Illinois, 3,000 tons; Empire City, 2,000 tons; Moses Taylor, 1,500 tons; America, 2,000 tons; and the new steamship Bonaparte, 3,000 tons. The Moses Taylor sails on the 11th instant.

**THE P. M. S. LINE.**—The Pacific Mail Steamship Company advertise the Constitution to sail on the 11th instant, and the St. Louis on the 21st. The Sonora sailed on Saturday. All the above, on both lines, are well built and substantial sea going steamers.

## HUMBOLDT NOT A FAILURE.

An unfavorable impression with regard to the value of the Humboldt Mines has been created in this city, within a few days past, by an unconsidered item which appeared in a late number of the Territorial *Enterprise*. The item in question was to the effect that two mills had recently been started in that district—had crushed rock from several of the principal ledges, with results of the most meagre description. It was stated that ten tons of ore from one of these ledges, supposed to be the richest in the district, yielded nothing more precious than lead or antimony. The substance of the item under its proper credit, was transferred to the columns of our last issue. Since that time we have conversed with parties from Humboldt, from whom we learn that the item in question, was entirely without foundation. The *Enterprise* has also exonerated itself in the premises by naming its authority.

No such amount of rock, as that named has been crushed from any one lead in Humboldt, up to latest advices, except from the "National," which is a gold lead and contains no appreciable quantity of either antimony or lead, or, we believe of silver—gold being its only return.

If the Humboldt Mines are to result in a failure or even anything approaching to a serious disappointment, the fact has yet to be proved. It is still confidently believed by those best informed, that this district, when it comes to be fairly developed, will prove to be quite as rich as Virginia City, or any other place.

LATER.

Since the above was put in type we have received the *Enterprise* of Jan. 27th, in which the "local" of that paper reiterates his previous assertion with regard to the crushing with poor results, of a quantity of ore at one of the Humboldt mills, and says:

\* \* A correspondent of the Sacramento *Union* admits the crushing, but accounts for the meager return on the supposition that the rock must have been of a quality inferior to the general average. \* \* A correspondent of the *Bulletin* also acknowledges the crushing, and explains the unsatisfactory result by saying: "Dodge & Co., of the Sheba Mill, have been experimenting upon the best manner of saving the metal, and it will be shown early in the spring that the mines of the Humboldt and Reese Rivers are as rich as any yet discovered." Another correspondent of the same paper, of the same date, likewise admits the working of the rock. His explanation of the causes of the failure, however—for a failure is not denied—differs somewhat from the avowals of others. He says:

"I am informed by Mr. Dodge, of the firm of Dodge & Co., owners of the Sheba Mill, situated in Star Canon, that in the process he first used, he found nothing in his amalgam, but found \$500 per ton in his stampings. Mr. Dodge also informs me that the Humboldt mines are rich beyond all calculation. I also have the vanity to think that I know as much of the Humboldt mines as any one, have re-visited these mines '61, and examined probably as many leads as any one in the Territory, and, so far as my experience goes, I fully concur with Mr. Dodge. The idea that assays are worth nothing is simply ridiculous. If they are to go for nothing, why not work rock that won't assay a red as well as rock that assays rich?"

The *Enterprise* adds:

"We leave the reader to reconcile these conflicting authorities, and weigh the result against our simple statement."

Being satisfied in our own mind that "somebody had blundered," we called upon Mr. Dodge, of the firm of "Dodge & Co.," proprietors of the Sheba Mill, who is now in this city, but who was in Humboldt at the time the mill was started. He confirms what we have learned from various other sources, that only the small quantity of rock, already alluded to, has yet been crushed from the Sheba vein.

In relation to the extract above quoted from the *Bulletin*, where the information purports to have been derived from Mr. Dodge, that gentleman explains as follows: The information was given to the *Bulletin* correspondent in a private conversation, and the "processes" alluded to were simply hand processes, conducted in this city, and to the extent of only three pounds of ore at a trial. The object of these experiments was simply to arrive at some correct and reliable method of treating the ore on a working scale at the mill. These results have, thus far, resulted in fully sustaining the preconceived ideas with regard to the value of the mine. If the "local" of the *Enterprise* will read the above extracts from the *Bulletin* attentively, he will see that he was not justified in inferring that those "processes" were tried at the mill. The writers, evidently did not intend to convey any such idea. The last paragraph of the latter quotation would seem to settle that matter for one of them at least.

With regard to the correspondents of the *Union*, we

would simply say that the proprietors of the mill, and of the lead, and their workmen all unite in the assertion that not a full ton of rock has yet been crushed at the mill, and not a pound of what has been crushed, has been amalgamated by any other than a hand process.

## Mining Operations about Virginia City.

Mining operations in and about Virginia City never presented a more favorable aspect than at the present time. In the entire range of nearly three miles from Cedar Hill to Gold Hill, along the line of the Comstock Lode, nearly all the companies have reached their leads, and in a short time many companies about which little is now heard, will be taking out rich rock. At Gold Hill, the damages of the late slide have been fully repaired and the claims put in good order for working. The Mexican Mine is said to have struck ore in their deepest shaft which, when assorted, is worth from \$7,000 to \$8,000 per ton. It is being prepared for shipment to England. The Ophir, which has recently been inundated with water, is recovering from its bath, none the worse for the drenching. It is more than probable that the reservoir from which this water has been drawn will prove to be a rich vein of ore. The Gould & Curry is now fairly in successful operation, though not yet to its fullest extent. The dividend declared on the 26th ult.—\$100 to the foot—is sufficient evidence of its richness. When the great tunnel which this company is driving up to strike the lead at a depth of 700 feet shall meet the vein, great developments may be expected. The Caledonia tunnel, three-fourths of a mile below Gold Hill, is being pushed forward with the utmost vigor. This tunnel it is expected will intersect ten distinct leads. It is now in nearly 2000 feet, and has passed through one lead, from which a stream of some 60 or 75 inches of water was flowing at last accounts.

The Ophir Company, according to the Territorial *Enterprise*, commenced gaining on the water in their mine on the 22nd inst.—not a moment too soon. The highest rise of the water was 80 feet, and reached within five feet of the 5th gallery. Had it entered that gallery, much damage would have been done. As it was, the work in the mine was not seriously interfered with as it was mostly done in and above the 5th gallery. The Mexican Company did not suffer to any great extent. The Central and California were a little troubled by the seepage. The mines above the Ophir of course are greatly benefited by the disaster—the La Crosse and Burning Moscow were particularly benefited. It will probably be some days yet before the water in the lower portion of the Ophir mine will be entirely drawn off. In the mean time operations in the mine will not be seriously interfered with.

In the Sullivan district several good leads have been developed. In the Palmyra District good prospects are reported. In the Spring Valley District, the mills are getting out \$20 and \$30 per ton, which though not large is nevertheless sufficient to encourage further operations. The Rock Point Mill has recently started with 40 large stamps, and two large breakers, crushing 60 tons per day.

The Territorial *Enterprise* says that a large number of mining companies are about to incorporate under the Territorial laws—among them, the Beach & Paxton, the Birdsall, the Oriental, the Pride of Washoe, the Zouave, and the York. That paper thinks that within six months a majority of all the companies of positive value, will incorporate there. It further states that an attempt will be made by a number of leading companies to have that portion of the Territorial Incorporation Act declared unconstitutional which requires the removal of the offices of California incorporations to that Territory.

**THE COPPER SHIPMENTS.**—Mr. Shields has shipped 54 tons of ore by the ship Peruvian, for the Swansea market. This ore is from the mine of the Newton Company, Amador County, and is of an excellent quality. It is expected, that when the roads open in the Spring, large shipments will be made from that District.

The order of Court for a survey of the El Dorado works granted to the Gould & Curry, embraces also a survey of the Rogers and Vanderbilt claims. These surveys, the *Enterprise* thinks, point to a general settlement of boundaries between the litigants.

## GENERAL MINING STOCK REPORT.

REPORT OF SALES  
At the San Francisco Mining Stock Board,  
For the week ending January 31, 1863.

Names of Companies.	Total No. Shares.	Per Share.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
Ophir	10,000	12	1050	1050	1050	1050	1050	1050

## Coso Stocks.

The Josephine changed hands at the Stock Board, on Monday, Wednesday and Thursday at \$15.

Coso—changed hands on Saturday at 12 dollars.

Wallow Springs—sold on Monday at \$10.

## Mexican Mines.

Mina Prieta changed hands on Monday and Thursday at \$125 and on Friday at 140.

Los Padre was quoted on Monday, Thursday and Friday at 35.

SAN FRANCISCO, February 2nd, 1863.

## STOCK REMARKS.

Transactions in shares, the past week, have not been so active as during the week previous. Although the week closed with a contrary opinion among many, a comparison of the "transactions" of the two weeks, as reported in these columns will sustain our assertion. Prices, however, have generally ruled better, and the decided firmness of the market may be set down as the chief cause which has operated to reduce the amount of transactions. The reports from the mines are generally favorable. Many valuable discoveries are noted—some of which are equal to anything yet met with in the history of California mining. The unusually favorable state of the weather for quartz mining is exerting a marked influence on that branch of mining industry. The same fortunate circumstance seems also to have affected favorably the feelings of buyers in this city, who, during the week have daily thronged Montgomery street, in unusually large numbers, manifesting a particularly good feeling in reference to mining operations generally, but affording also, unmistakable evidence that an increasing amount of capital is held in store for investment in this important branch of business.

Ophir has rallied somewhat from last week's depression and now stands firm with more of a business than speculative attitude. The late disaster has fully eliminated, with much less damage to the mine than was at first anticipated. The work of completely draining off the water will soon be completed. The market for the week closed at \$2450 cash, and \$2500 on 60 days. The dividend for January will again be small, probably not over \$26 per foot; but holders are sanguine of the future of the mine, and look for a large dividend for February.

Gould & Curry paid a dividend of \$100 per foot on the 30th ult., and carried over a balance of \$2000 to the account for February. Shares have advanced about \$150 per foot, with but little stock offering. \$120 per foot has been offered for February dividends.

Chollar has again an upward tendency having advanced thirty-five dollars per foot from Thursday to Saturday. It is now held firm at \$130. Further advances are expected.

Potosi, which had steadily advanced to \$180, declined the past week to a larger amount than Chollar has advanced. It sold at the Board on Monday for 165 dollars and on Saturday had declined to 130. This may be considered as indicative of the termination of the Chollar Potosi suit adverse to the latter.

North Potosi has improved eight dollars which is taken as indicative of improved prospects in its suit with the Hale and Norcross.

Sierra Nevada Stocks have been largely dealt in the past week at about the usual rates.

## ESMERALDA STOCKS.

Emerald Stocks have commanded considerable attention during the week. Accounts from that district are generally favorable.

The Wide West.—An unusual amount of this stock has been placed in the market during the week, which at first caused a decline. It subsequently, however, rallied a little, and finally closed with a firm market at slightly reduced rates. About 600 feet have changed hands during the week.

Utah. Considerable excitement in this stock was caused by the report of a telegraphic order from the mine to agents here to buy largely, which they did, and as a consequence stock rapidly advanced from \$65 to 100. Holders are now asking \$110 and upwards. 327 feet have changed hands during the week at prices from 62½ to 100 dollars.

Antelope, Esmeralda, Del Norte and Silver Hill have been largely dealt in during the week, generally at advanced rates.

## TRANSACTIONS IN SHARES.

Ophir—60 shares at \$2400 per foot; 36 at 2375, 12 at 2425; 48 at 2455 00 at 2460, 240 at 2600, 10 days, 60 at 2460, 50 at 2425.

Gould & Curry—12 at \$3150, 40 at 3250, 181 days with dividend; 40 at 3250, 1st of August at 1½ per cent interest.

Chollar—20 at \$307½; 40 at 405, 20 at 410; 28 at 415; 12 at 420, 40 at 425 20 at 440.

Savage—5 at \$1200; 7 at 1175.

Potosi—10 shares at \$165; 10 at 170, 10 at 185; 14 at 190; 25 at 175; 40 at 180 50 at 185.

Sierra Nevada—25 at \$55; 25 at 57½; 10 at 60; 20 at 61½; 10 at 63; 10 at 60, 40 at 57½; 10 at 60; 15 at 58, 20 at 57½; 10 at 60.

Burned Moscow—10 at \$70; 10 at 67½; 50 at 65; 6 at 67½; 28 at 62½; 40 at 61.

Charles Caney—20 at \$22; 18 at 20; 25 at 21; 25 at 22.

Meredith—20 shares at \$30; 10 at 32½; 30 at 25; 20 at 35.

Hale & Norcross—10 at \$505; 5 at \$570½.

Daney—20 at \$25, 40 at 235.

North Potosi—19 at \$22; 12 at 22; 12 at 22½; 50 at 25; 30 at 23.

Norton—10 at \$25; 25 at 27½; 30 at 16; 24 at 50, 10 at 28.

Burned Moscow—20 at \$15.

Mount Davidson—100 at 4½; 50 at 5.

Sacramento—10 at \$35; 20 at 31½, 25 at 40.

Union, Russ District—20 2½, 200 at 2½; 50 at 3.

Burned Moscow—10 at \$65; 16 at 65; 4 at 62½; 8 at 62½.

## ESMERALDA DISTRICT.

Wide West—100 shares at \$200; 100 at 325; 100 at 350; 200 at 340, 400 at 320 to 375. Sanborn & Co. quote at 305.

Antelope—20 at \$210; 20 at 205; 15 at 200; 10 at 197½; 7 at 205; 10 at 200 8 at 207½.

Real del Monte—50 at 25; 25 at 25; 25 at 27½; 50 at 26; 38 at 28.

Silver Hill—60 \$22½; 20 at 23; 16 at 24. Quoted at 25.

Garibaldi—20 at \$25, 5 at 27; 15 at 24.

Esmeralda—10 at \$57½, 10 at 60; 6 at 57½; 5 at 61.

Utah—227 at \$70 to 95.

Delta—10 at \$5.

\* Quotations made at given rates per foot.

## COPPER STOCKS.

The Napoleon has been considerably dealt in the past week. The following transactions are quoted—4 shares at \$35; 21 at 30; 10 at 34; 10 at 35; 12 at 35; 20 at 30.

## Stocks in Virginia City.

Corrected by WIGHTMAN & MITCHELL for the Virginia City Union.

The following stocks, are in the market in Virginia City, and held at the prices annexed:

Ashtabula	25 00	American Basin Co.	20 00
Santa Fe	25 00	Hawkeye	20 00
Empire	5 00	Consolidated Cedar Hill	4 00
Santa Rita	35 00	Utah	40 00
McElree	25 00	Industrious	5 00
Zouave	10 00	North American	5 00
Belvidere	15 00	Philadelphia	4 00
Yorck	4 00	Sigol	2 00
Governor Nye	7 00	Virginia	5 00
Battle	20 00	Commercial	4 00
Peyton	—	Uncle Sam	3 00

St. George	4 00	Sacramento	30 00
Mary Ann	25 00	Farquison Co. Keller Lodge	5 00
Adriatic	2 00	Monarch	20 00
Golden Gate	5 00	Irvine	5 00
		Bald Eagle	2 00

## ESMERALDA STOCK REPORT.

(The report of the Esmeralda Mining Board for the 16th ult not having been received we continue our last quotations.)

At the meeting of the Esmeralda Stock Board, held January 9th, 1863, the following business was transacted in stocks, as reported in the Esmeralda Star.

Pride of Antelope—25 shares offered at \$5.

Union Tunnel—10 shares offered at \$15.

Altova—5 shares offered at 25.

Bamboo—20 feet offered at 75—bid 50.

Strawberry—25 shares offered at 16—bid 8.

Ex. Johnson—100 feet offered at 8.

Fresno—25 feet offered at 8.

Del Norte—12 shares offered at 36.

Esmeralda Stocks offered at San Francisco valuation:

Antelope	offered at \$225 00	Wide West	offered at \$410 00
Garibaldi	10 00	Malta Esmeralda	45 00
Silver Hill	20 00	Utah	45 00
Delta	8 00	Real del Monte	25 00

## TRANSACTIONS OF THE WEEK.

240 feet of Bamboo sold at \$40 per foot.

65 shares Strawberry sold at \$10 per share.

100 feet Golden Age at \$5 per foot.

25 shares Peru, at \$5 each.

20 feet Bodie Bluff Consolidation, at \$12.

Application for Examination and Classification was received from the following Companies:—Garibaldi, Ural and Julia Elizabeth  
J. B. BLANCHARD, Secretary.

## WASHOE STOCK REMARKS.

[COMPILED FROM THE DAILY TERRITORIAL ENTERPRISE.]

Monday, January 19.

Fifteen feet of Hazel Green sold to day for \$5; 15 feet Oriental, at \$4; 15 feet Zouave, p. t.; 11 feet Birdsell, at \$17; 10 feet Pride of Washoe, at \$10. The latter is a new claim back of the Virginia and on the south side of Keystone Ravine, in this District. We know nothing of its value, except by report; but quite a number of transfers in the stock have taken place lately. El Dorado is offered at \$50 @ \$55; Union, at \$12 @ 15; Hazel Green at \$5; Oriental, at \$4; Zouave, at \$8 @ \$7; Ashland, at \$8; Penn, at \$4 @ \$5; U. S. Tunnel stock, at \$2,500 per share; Cedar Hill Tunnel, at \$4. A new strike of valuable ore in the Yellow Jacket is reported to-day.

Tuesday January 20.

But two or three sales were reported to-day, and nothing of importance was noted in the way of discoveries. The reported strike of valuable ore in the Yellow Jacket, mentioned yesterday, is correct.

An order for a survey of the El Dorado mine has been granted by Judge Mott to the Gould & Curry, and the latter are about to be proceed against by a company claiming in front of their ledge. Something should be done at once to deliver the claimants in that neighborhood from the snarl in which their mining possessions are involved.

Twenty-five feet Pride of Washoe were sold to day at \$20 Per foot; 10 feet Oriental at \$3 50; 15 feet Hazel Green at \$4 50. Other figures remain, without an exception, at the quotations of yesterday.

Wednesday, January 21st.

Very little done in Stocks to-day—people generally too much engrossed in sleighing. A sale of 10 feet of La Crosse reported at figures which the "Enterprise" esteems doubtful, but quotes at \$17 to 20. Ten feet of Sacramento is quoted at 47, and 15 feet of Gellor at 5½. These transfers embrace the entire sales of the day.

THURSDAY EVENING, Jan. 22nd.

Reports from San Francisco are inspiring. The published records of transactions below do not reflect the intensity of the general disposition to invest in the mining stocks of Nevada. Everything augurs favorably for the coming Spring. Inquiry for Norton, Rogers, Allen, North Potosi, Sacramento, and Savage, at San Francisco quotations reaches us from the Bay, but stocks seem to be held somewhat more firmly than in California.

Few sales are reported to-day. El Dorado is offered at \$50 @ \$50; Birdsell at \$20; Pride of Washoe at \$15; Governor Nye at \$5; Wellington at \$10 @ \$12; Oriental at \$3 50; Hazel Green at \$6; Dunn at \$4 @ \$5; Sinaloa at \$7 50 @ \$8; Fairview at \$20; Cedar Hill Tunnel at \$4; U. S. Mining Company at \$200 per quarter interest; Zouave, \$6. These are the lowest rates at which most of the stocks mentioned can be obtained, and amounts in market are limited.

Friday, January 23rd.

There has been some activity in the Stock Market to-day. Inquiry was made for Sacramento at \$45 to 50—for Beach & Paxton at 30—for Birdsell at 17 to 19—North Potosi at 10 to 12 and for Savage, Rogers and Potosi at San Francisco quotations. Holders, however, are disinclined to part with their stock in these claims at prices mentioned. Gold Hill is engrossing much attention; and a number of claims which have slumbered for two years are now coming into favor.

Saturday, January 24th.

The week closes with much firmness in all second rate Stocks. The transactions of the week, however, do not foot up largely, although the rates obtained are generally satisfactory to buyers.

Sacramento shares cannot be bought at this time in Virginia City for less than \$75 per foot. San Francisco quotations to the contrary, notwithstanding.

The Argentine District which has been pretty much abandoned for the past 18 months is again finding favorable mention. A new claim called the Vulcan, the croppings of which assay well, seems to be the favorite. Some considerable prospecting is being done and valuable ore may be found. A few of the claims in Pahya are held at large figures. The Summit still continues to attract some attention. The Orizaba has been sold lately for \$150 per foot. Sales to-day have been light.

MONDAY EVENING, January 26.

Wild reports from Reese river have been in circulation to-day. Ore from that region, assaying \$20,000 to the ton is exhibited, and many are preparing for an early visit to the new mines. We trust the country may prove as rich in gold and silver as the wildest dream of the prospecting enthusiast, but we have little faith in these reported assays. A word to the wise is sufficient.

The sales to-day have been limited. Transfers of Zouave were made at \$6, of Waterhouse at \$3 50, of Birdsell at \$18 50, of Allen at \$45, of Sacramento (5 feet) at \$60.

We quote U. S. Mining Co. at \$2400 per interest; Granada Tunnel Co. at \$1,000 do; El Dorado, \$50 @ \$55; Wellington, \$12 @ \$15; Hazel Green \$4 50; Utah, \$40 @ \$45; Sacramento \$60 @ \$65; Oriental, \$3 50; Pride of Washoe, \$15 @ \$20; Santa Rita, \$35; Cedar Hill Tunnel, \$3 50; Dunn, \$4; Sinaloa, \$7 @ \$8; Union, Gold Hill, \$8 @ \$12.

## MEXICAN MINES.

Intelligence from the Mexican Mines in Sonora is highly favorable. The Mina Prieta is fast moving its machinery (which is of a very superior class) to the mine. It will probably be in operation inside of three months. This is pronounced one of the best mines in Mexico.

The Musidora, upon the same vein, has its tunnel 90 feet, with about 50 feet more to run before reaching the vein. They expect to strike the vein in a little over two months.

The Brouces Mine is receiving additional machinery, which they expect to have running in about four months.

The machinery for the Dios Padre, at Alamos, is most properly now upon the ground.

Additional machinery has also gone to the Guasapuxa Mine on the edge of Chihuahua. Capt. Frederick Griffin of this city has recently taken a large interest in this Mine, it now being entirely owned by Americans—Griffin, Hurd & Co.

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will accept the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine.....3cts per oz.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my speciality for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonable.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

## Dr. Van Zandt,

### Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity Made Subservient for the Cure of all Nervous and Spinal Diseases.

**THAT THIS PRINCIPLE**, successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanted by physicians, to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

## Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting and in order that the tissues of the body should be susceptible to remedies, agents we must first restore and

## Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do, most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

## No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

## To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned and sensitive organism, together with their great sympathetic life, renders him doubly able to assuage those silent complaints which they bear so patiently and so long. No social seclusion need longer afflict our home circles; for he can arouse the stricken energies; restore the wondrous totality of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

## Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and listlessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures, which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

## All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or caustic habit of body.

## None Need Despair of Relief.

If you have ailers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that keeps you sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

## The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon on our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

Steam Engines and Boilers constantly on hand, and for sale cheap. Screw-Cutting and Turning Lathes for sale. DEVOE & CO.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots which are now offered for sale on reasonable terms any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mount Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wildcat mining stocks, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,  
No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office. no 13 6mo

Between Sansome and Battery, SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work. All orders from the country promptly attended to.

## FREDERICK KESMODEL,

## Cutler &amp; Surgical Instrument Maker,

817 KEARNY STREET.

Between Jackson and Washington streets,  
SAN FRANCISCO.

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are all uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that its movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,

Inventor and Patentee

ap3 1f

## LABOR-SAVING

## Rock Drilling Machine,

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE and Quarrymen. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

## HAND, HORSE, AND STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process. Address orders to

WM. W. DUNN,

Fremont street, bet. Market and Mission, San Francisco.

## LATEST IMPROVEMENT

## in Ladies' Buckles.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE Ladies of this State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address, FREDERICK REICHEL, Manufacturing Jeweler, 620 Merchant street, San Francisco.

## REMOVAL.

OFFICE OF THE PACIFIC METAL-Working Office is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent, 318 California street, near Sansome, up stairs.

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name. JOHN WRIGHT, 511 Market street, Opposite Battery, San Francisco.

The question of taxing mining claims by the General Government, after a long slumber, seems to be again revived. The agitation of this subject I cannot but regard as extremely impolitic. In a vast majority of claims it is impossible to estimate their value above what they may afford to the laborer from day to day, and with most of the balance there can be no ascertained permanency or reliability of value upon which an assessment could be made with confidence or with satisfaction. A tax upon these claims can never be laid that would be just in its burdens or equitable in its results. When the sagacity and toil, the anxiety and patience, of the miner are rewarded with success, the results of that success, become the subject of taxation and the source of revenue.

## P. M. S. CO.

The Fast and Favorite Double Engine Steamship,

MOSES TAYLOR,

E. HOWES ..... COMMANDER,

Will be dispatched for

San Juan del Sur,

From Mission street Wharf.

Punctually at 9 o'clock, A. M., on

WEDNESDAY, - - - MARCH 11. 1863.

Connecting at GREYTOWN with the Splendid Steamship

ILLINOIS ..... 2500 Tons.

Reduced rates of Passage and quick trips are secured by the re-opening of the Nicaragua Route.

These Steamers are unsurpassed for speed, cleanliness and safety, and every effort will be made to insure the comfort of passengers

For further information apply to

I. K. ROBERTS, Agent,  
No. 107 Washington Street, opp. Post Office.

## DONAHUE'S

Union Iron and Brass Foundry,

CORNER OF FIRST AND MISSION STREETS, SAN FRANCISCO.

The First Established in the State.

MANUFACTURE STEAM ENGINES, SAW AND GRIST Mill Machinery, Boilers, Quartz Stampers, Amalgamators, etc., etc., at reduced prices. Have now the largest and best assortment of Gear and Machinery Patterns in the State, a list of which will be forwarded to anyone desiring it, free of cost.

PETER DONAHUE.

## LEWIS COFFEY AND RISDON,

STEAM BOILER AND SHEET IRON WORKS.

The only exclusively Boiler Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work, the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner Bush and Market Streets.  
Opposite Oriental Hotel, San Francisco, Cal.  
LEWIS COFFEY J. N. RISDON.

## GREAT REDUCTION

## IN PRICES.

STANFORD BROTHERS,

121, 123 and 125 California Street,

Keep the Largest Stock of all Kinds of

## Lamp Stock

And will Sell Cheaper than any other House in this State

LAMPS, CHIMNEYS,

WICKS, CAMPHENE,

BURNING FLUID,

ALCOHOL, COAL OIL,

TURPENTINE, KEROSENE OIL,

COMET ILLUMINATING OIL,

SPERM OIL, LARD OIL,

MACHINERY OIL,

RAPE SEED OIL,

CHINA NUT OIL,

## TO OWNERS OF WATER-POWER

## Beth's Hydraulic Pressure Wheel.

THE SIMPLE, COMPACT, STRONG AND

effective manner in which it is applied to any height of fall, (3 feet to 100), and to any kind of machinery, will Save in Transportation Material and Labor, from

25 to 50 per cent. of the entire cost of the

Structure to which it is applied, and proportionally increase its value.

For full information from the Inventor, apply at the

Miners' Foundry, from 10 to 11 A. M., or address

J. M. BETH.

Miners' Foundry, San Francisco.

This Wheel is fully GUARANTEED. Jan 10-1863

## Holiday Presents!

IN

WATCHES,

DIAMONDS,

JEWELRY AND

SILVER WARE,

AT

BRAVERMAN & LEVY'S,

621 Washington Street,

WE CALL THE ATTENTION OF OUR FRIENDS AND the public in general to our well assorted stock of

JEWELRY AND SILVER WARE,

Of the latest and Most Fashionable styles, which we have received by the last Steamer. Also,

FRENCH CLOCKS,

AND

PRECIOUS STONES,

Which we are selling, SET or UNSET, at the very LOWEST PRICES.

BRAVERMAN & LEVY,  
No. 621 Washington Street,  
Facing Maguire's Opera House.

Dec 29 1862

## LEANDER RANSOM,

Civil Engineer

AND

## SURVEYOR,

Having been connected with the public works of the State of Ohio for 20 years, and the public surveys of the State of California for 7 years.

ALSO

## STATE LOCATING AGENT.

And as such having the sale of

600,000 ACRES OF STATE SCHOOL LANDS,

At the low price of \$1.25 per Acre.

Terms—Twenty per cent in cash and the balance on a credit of several years.

OFFICE: Second floor of Express Building, N. E. corner of Montgomery and California streets. oct-7-3m

## Agency For Patents.

THE UNDERSIGNED having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Patents and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

WETHERED & TIFFANY,

Office, 410 Montgomery street.

CHARLES R. BOND, (Late City and County Assessor.)

REAL ESTATE AGENT,

No. 410 Montgomery street, San Francisco.

REAL ESTATE PURCHASED AND SOLD, AND LOANS NEGOTIATED.

## For Sale Cheap!

A HORIZONTAL STEAM ENGINE OF 4 Horse Power, Fine Boiler, in excellent order, capable of driving a ten stamp mill, for sale at half its original cost. Apply to

JULIUS SILVERSMITH,  
Federal Building, cor. Battery and Washington Sts.  
Route, No. 28.

## DEETKEN'S

Chemical and Metallurgical Works,

On San Bruno Road, Islais Creek,  
SAN FRANCISCO.

CLEAR GOLD BEARING SULPHURETS WORKED AT \$30 PER TON. ALL THE GOLD EXTRACTED BY CHEMICAL process. Yield of Sulphurets from 20 to 60 per cent higher than the BEST AMALGAMATION PROCESS. Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for the purpose. nov8-2m

## SQUARZA'S PUNCH.

## HOME MANUFACTORY.

WHOLESALE AND RETAIL,

No. 44 Leidesdorff St., near Sacramento.  
Branch at 406 Montgomery street. my 30

## JULIUS SILVERSMITH,

Commissioner for Nevada Territory,

OFFICE, IN LATE STATE CAPITOL,

Corner of Battery & Washington streets.  
Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE who have business relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

## JAMES PHILAN,

(LATE J. & M. PHILAN.)

IMPORTER AND JOBBER,

Wines, Liquors, Etc., Etc.,

Nos. 616 & 618 Front street,

Between Jackson and Pacific Streets,  
Established 1849. SAN FRANCISCO.

All Goods Guaranteed. Orders Solicited.  
TERMS LIBERAL. Jan. 1-1863

## THEODOR KALLENBERG,

Maker of Models

FOR INVENTORS.

MACHINES, MATHEMATICAL, Optical and Philosophical Instruments, Scales, Weights, etc.; Steel Stamps, Dies and Die Sinking, Engraving, Stamping, Repairing of Machinery promptly attended to.  
No. 4 Sansome street, corner Market, (at 7.3m) San Francisco.

## PALMER, HANSCOMB &amp; CO.,

GOLDEN STATE FOUNDRY

AND MACHINE WORKS.

First Street, near Market, San Francisco.

RESPECTFULLY SOLICITS ORDERS for all kinds of MACHINERY, for Mining and other purposes. Please send Plans and Specifications. Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast.  
San Francisco, November 29, 1862. 3m

## 50 lbs. MARINE AND

Fire-Proof Paint,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Bottoms of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

## DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chauldiers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

## 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

## DIRECTIONS:

HOUSE.—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil; if a lighter color is wanted, mix less paint, more lead.  
ROOF.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI.

SAN FRANCISCO, MONDAY, FEBRUARY 9, 1863.

NO. 15.

#### ESMERALDA CORRESPONDENCE.

AURORA, JAN. 30TH, 1863.

MR. EDITOR:—Quite a large number of your citizens are taking advantage of the present spell of unusually fine weather, to pay us a flying visit, to examine our mines and see for themselves. The hills are daily thronged with new prospectors, looking for "indications," and every thing in the shape of a quartz bolder, will soon be located and recorded, and then, after the process of incorporation is gone through with, the stock will be pushed into the market or pressed upon particular friends, as "wonderfully rich," or as a "good thing." A similar operation was enacted here last fall, by some parties from your city, but upon a somewhat smaller scale. I then cautioned the citizens of San Francisco not to purchase without first becoming posted in regard to the merits of this kind of mining stock.

#### WRONG IMPRESSIONS CORRECTED.

I find by conversing with several new-comers that they have been misinformed, or rather, that they have an incorrect impression as to the name and location of these mines. Many have the name of the county, the district, and the town in their minds, as different mining districts. For the benefit of the mining public, I will correct this error; Mono, Esmeralda and Aurora are all one and the same place; the only difference being this: Mono is the name of the county which embraces all, or nearly all, of the territory of the State on the east side of the Nevada, commencing at the intersecting point of the south line of El Dorado County with the State line, and thence south east, some two hundred miles; Esmeralda is the name of the Mining District in the county of Mono; Aurora is the county seat or chief town in the county of Mono, and is situated on a small flat at the base of Silver, Middle and Last Chance hills, the flat being formed by the conjunction of the gulches, making a town from these hills.

#### SILVER HILL MINING DISTRICT.

This District is situated about seventy-five miles north-west from Aurora, and near Carson Cañon. I would have your readers understand that "Silver Hill," when spoken of in connection with this place is not the name of a Mining District, but only a hill in Esmeralda District.

#### EXTENT OF ESMERALDA MINING DISTRICT.

The territorial extent of this District is from East to West, from two and a-half to three miles; from North to South about three miles, and embraces the following named hills: Silver, Middle, Last Chance, Monterey, Humboldt, Aurora and St. Mary. The town of Aurora is nearly enclosed by these hills, upon which is located from twenty-five to as high as one hundred and fifty well defined gold and silver bearing quartz lodes, and many of them exceedingly rich.

#### THE MINES RICH.

I have operated in quartz for the last twelve years, in California and Washoe, but this District exceeds any thing else that I ever saw in the number of its well defined and paying quartz lodes. No one here pretends that they

are all Ophirs, Wide Wests, or Antelopes; but every third one will pay from \$40 to \$60 per ton in gold.

#### ENUMERATION OF SOME OF THE PRINCIPAL LEADS.

I will here mention the names of a few good lodes that are owned and worked by practical miners, viz.: The Mason, on the summit of Silver Hill, between Central and Old Winnemucca, formerly known as the Eclipse, containing 400 feet in length and six in thickness with every indication of a rich lode, when more thoroughly prospected; the Lady Mack is another good lode and well defined, the length of the claim being about 800 feet, but, like many others, it requires more labor to demonstrate its true value than has yet been expended upon it. The Utah and the Iowa are A, No. 1 lodes, (Antelope not excepted;) both being free from any entangled allegiance to any neighboring lode or spurs. The Dane lode is situated just half way between the two next above mentioned, and is one of the old locations, and from all appearances looks more promising than the Utah did a year ago. This lode is four feet thick, decomposed, and shows free gold. The Yreka, and many others on this hill will surely, before long, prove all if not more than the locators anticipated. The main Esmeralda and Silver Hill are also upon this Hill.

On Middle Hill, are the Pride of Esmeralda, Constantino, Henry Clay, Live Oak, and Lady Howard, all well defined lodes.

On Last Chance hill is the Wyoming, which is one of the best lodes in the district. It was located on the 20th of October, 1860, and is situated between the Banner and the Wide West, and directly on a line with the rich Johnston lode. This company is incorporated and has got everything in good shape through the enterprise of their energetic President and Secretary, Peter Oppenheimer. The Blanchard lode, one hundred feet from the Johnston, in a south-easterly direction, struck excellent rock last week, and the owners anticipate a "big thing." They have eight hundred feet in their claim. The Joe Hooker, is another good lode; one hundred feet in the claim, two and a-half feet in thickness. I may also add the Mammoth No. 1, Gen. Grant and the Ad Valorem, also the Pugh lode, located October 22nd, 1860, by John W. Pugh. This lode is at right angles with the hill and contains six claims of two hundred feet each—they have a shaft to the depth of some forty feet, at which point a rich vein of ore has been found. The well known Wide West is located on this hill, also the Garabaldi, Real del Monte, Alturas, and others.

A word about the extension of the Johnston. The 1st easterly extension of the Johnston has been struck at the depth of fifty feet—the rock is rich; it looks equally as well as the Wide West, and preparations are being made to take out one hundred tons of the rock to be worked. A large yield is looked for by the holders of this truly valuable mine. This extension was located on the same day as the discovery claim—the 3d of July, 1862. Fisher & Crocker and Parker & Co. are the locators. They have eight hundred feet in the claim. The continuation of this lode was found by Peter Johnston, the original discoverer of the Johnston lode, who contracted to sink a shaft on the continuation,

until he found the lode, for 100 feet of the ground. He was so fortunate as to strike good pay-rock at the depth of fifty feet. I shall hereafter continue, from time to time, to keep you posted as regards the merits and demerits of the mines and mining operations in this district, &c. S.

#### A New Mining Region.

A new and probably important mining region has been discovered in the western portion of Nebraska Territory. The discovery was made in September last by a party of some twenty miners, who were returning from the Bitter Root Valley Diggings, to Salt Lake. They collected about \$50,000 in a few weeks, which they took to Salt Lake. This newly discovered mining district commences on Wind river, about 400 miles North-west from Fort Laramie, and embraces an area of about 200 miles in length by 100 in breadth. The deposits discovered up to the present time are of gulch gold, very similar in appearance and richness to those of the Feather river mines. It will assay at least \$18 to the ounce.

The region is the same as that described by Lieut. Reynolds, of the United States Topographical Engineers, in his report of 1859, in which he states that he discovered gold in all the streams embraced within a distance of some 200 miles. It lies at the eastern base of the Rocky Mountains, and is similar in its geological formation to the Salmon river and Bitter Root Valley districts, where rich deposits of gold have been discovered within the past year. The miners who discovered these new diggings unite in the opinion that they will prove fully equal to any ever discovered on the continent. The distance from Omaha to the Wind River Mountains, at the base of which the first discoveries were made, is about 900 miles. The route is all the way upon the north side of the Platte River, and no stream of any magnitude intervenes except the Loup Fork, which can readily be crossed any time during the spring and summer, by ferry.

Freight can be taken to the newly discovered mining region from Omaha at 16 cents a pound. The South Pass of the Rocky Mountains is only about 200 miles from the mines. The facts given above are obtained from sources entirely reliable.

THE OCEAN STEAMERS.—M. O. Roberts advertises the following vessels as belonging to his opposition line of steamers from New York to San Francisco: Illinois, 3,000 tons; Empire City, 2,000 tons; Moses Taylor, 1,500 tons; America, 2,000 tons; and the new steamship Bonaparte, 3,000 tons. The Moses Taylor sails on Wednesday, March 11th.

THE P. M. S. LINE.—The Pacific Mail Steamship Company advertise the Constitution to sail on the 11th instant, and the St. Louis on the 21st. The Sonora sailed on the 31st ult. All the above, on both lines, are well built and substantial sea going steamers.

PRECIOUS METALS.—Thomson's Bank Note Reporter, New York, says there is more gold in the United States now by \$30,000,000 than there was before the war broke out.

## THE GRASS VALLEY, NEVADA CO. SILVER MINES.

The Grass Valley *National* speaks as follows of the silver mines opened near that town, last summer:—

Since the commencement of the season of storms, generally so disastrous to the mining interest, the mines out at Greenhorn have, to a great extent temporarily abandoned operations. But there has not been a total abandonment even during the time of storms, and considerable has been accomplished during the past few months in demonstrating the richness of the diggings at Greenhorn; and the prospect of heavy expenditures of money in opening gold and silver ledges, during the approaching spring, and a confirmation of the opinion now obtaining, of the great wealth of this region, are confidently anticipated by the people hereabout. In the Greenhorn Company, opened last fall, work is progressing satisfactorily. It will be remembered doubtless that a gold-bearing quartz vein was opened last fall, the work being done in an open cut, and that the vein was traced but a few feet, yielding therefrom about \$4,000. A drain was dug from this cut, in the construction of which about ninety tons of quartz were taken out, all of which was crushed, making a handsome yield. A tunnel was subsequently run in to reach the main ledge, striking the vein at a distance of about sixty feet from the mouth of the tunnel, where the rock has a rich appearance. In the Stone wall Jackson claims, adjoining the Greenhorn, work is being done, the prospects of success being highly flattering. Some work has also been done in the Buffalo, Harrison, Jackson, and other silver ledges in the Greenhorn district, and when spring approaches, and fears of inclement weather are no longer entertained, we may confidently look for prosperous mining activity out at Greenhorn.

**NATIONAL PROGRESS IN TURKEY.**—The Ottomans are fast becoming aroused to the importance of intellectual and material advancement. Of late years they have been sending out agents from their most experienced and intelligent men, to visit other countries and become acquainted with their methods and means of progress. That hitherto declining race is evidently profiting by their observations. Evidences of this are constantly accumulating; among the chief of which may be noted the fact that an International Exhibition of the products of the soil, and mechanical industry of that country is to be inaugurated at Constantinople, on the 20th of the present month, to continue for three months. Foreigners are invited to take part in the exhibition and compete for prizes. It seems that the shaking up of that old dynasty by its late encounter with Russia has galvanized real life into it. The "sick man" of Europe may now be considered convalescent.

**INCREASE OF WEALTH.**—The increase of the national wealth for the last decade is set down in the census in round numbers at \$900,000,000, of which about one-third was in States now in rebellion. The remaining \$600,000,000 consisted largely in the augmented value of real property, chiefly in the Western States. A tract of land in the distant uninhabited wilderness was of little value; but when by means of railroads and steam communications, an enterprising and industrious population were introduced, property advanced rapidly in value. The increase of Bank Capital during the decade was less than \$200,000,000, and of deposits in Banks \$125,000,000.

**GEN. SHIELDS.**—The military standing of this gentleman having recently passed under a cloud, he has wisely determined to resign his position in the army and again take personal charge of his rich mines in Mexico.

There is another California General, we wot of, similarly situated, who would probably be of quite as much service to himself and country by following the example of General S. Mining, when one has a rich claim to operate upon, is far better to "put money in your purse" than fighting.

**THE CATTLE MANIA.**—Five or six years ago nearly every one in California was crazy with the cattle speculation. It was said to be impossible to overdo the business, and people could not well wait for the natural increase of stock, but cattle were driven across the plains by thousands. The number in the State was then estimated at about one million and their value at \$30,000,000. About the same number still remain, but their aggregate value has dwindled down to probably less than \$10,000,000. Several thousand head of cattle have been sold the past season, in Santa Barbara county, for from one dollar and a half to three dollars per head.

**COTTON** is now worth from 58 to 60 cents per lb. Two years ago it was dull at 13 to 14 cts.

## Another Gigantic Project.

The present is most emphatically an "Era of Magnificent Enterprises." The inter-oceanic telegraph; the American Continental Railroad; the tunneling of the Alps and the Pyrenees, and the Suez Canal, would, either one of them, 20 years ago, have been considered as a characteristic work of the age. Now either one is so lost in the multiplicity of projects, as scarcely to attract any special consideration; and the gigantic undertaking recently set on foot in Germany, scarcely second to either of the above, is announced in a simple newspaper item, as among the trifles of the day. This last project is no less than a ship canal from Amsterdam, through North Holland, toward the Sea—to be 250 feet wide, 24 deep, and 13 miles long. When completed, it will shorten the distance from Amsterdam to London and all the ports south of the Texel, by about 80 miles, so that vessels will then be enabled to reach the sea in a few hours, whereas the present trip occupies several days, and sometimes weeks. In order to form a safe sea entrance to the canal it will be necessary to construct an artificial harbor, the piers of which will extend more than a mile into the sea. This will be the chief engineering difficulty to be overcome. The total capital required is estimated at \$7,500,000, upon which the Dutch Government guarantee an interest of 4½ per cent. The undertakers are J. G. Jager, of Amsterdam, and the English Engineers, B. W. Croker and Chs. Burn. These gentlemen have been ten years maturing this project, the grant having been originally asked in 1852.

**"THE PHYSICAL MEN OF OHIO."**—The Commissioner of Statistics of the State of Ohio, in his annual report, says: Professor Henry and myself have been several years engaged in defining the American man, by accurate measurements. He presents only such of these as go to describe accurately the men of Ohio. For this purpose he gives the measurements of three hundred farmers, miners, and laborers, in eleven villages; of two hundred and thirty others, in eleven villages; and five companies of Kenney's cavalry—all native Americans. The following appears to be the general results of these measurements: That the man of Ohio is five feet nine and one-third inches high, and is taller than any European nation of which there are measurements. He is taller than the Belgian, by several inches; than the English, and even the Scotch Highlanders. The Highlanders, however, exceed the Americans around the chest, and are, on the whole, the stoutest. In complexion, eyes, and hair, the light predominates over the dark. The prevailing hair is brown, and the prevailing eyes gray or blue. In one word, the native American is a modified German of the time of Tacitus, and such he ought to be from his antecedents.

**SELLING CHILDREN IN CHINA.**—The *Esperance*, of Nancy, publishes the following particulars respecting the proceedings of the Sainte Enfrance, in China, extracted from a letter written by a lady, a native of Nancy, at present residing in Hong Kong:—

All that you have heard about Chinese children is but too true. They are not, indeed, given to pigs here, but that is the case further in the interior. At Hong Kong mothers come to the asylum of the Sainte Enfrance and offer their children for sale, as I myself saw only a day or two ago. I have just visited this asylum, kept by the nuns of St. Paul, whose principal establishment is at Chartres. While I was there the bell rang, a nun went to open it, and returned in an instant after with a female infant only a few days old. The price paid was 200 sapeks; but the mother, a hideous creature, wanted more, or else to have the child's clothes returned, which were accordingly given to her. The nuns told me that there were women who carried on quite a trade in these poor babes. One had brought no less than forty to the asylum, and she confessed that before she had the opportunity of selling them, she had thrown above six hundred into the sea. I must tell you that I stood godmother to the poor thing purchased in my presence. The great cause of these horrors is that the Chinese can repudiate their wives and marry again every year. The divorced wives, according to the Chinese laws, have the right of life and death over their children, and if unable or unwilling to rear them they get rid of them in any way they choose.

**THE STATE ALMANAC AND HAND-BOOK OF STATISTICS.**—We have received of Henry G. Langley, of Directory fame, a neat Hand-Book Almanac, containing various items of interest of both State and Country. Long may the Publisher live to direct the footsteps of our citizens.

**COINAGE.**—The amount of gold coined at the San Francisco Mint, for 1862, was \$33,042,841—of silver \$1,205,698.

**MUNIFICENT DONATION.**—We see it stated in the daily papers that Harvey S. Brown, Esq., has donated to the City College, now a flourishing institution of 125 pupils, the princely sum of \$50,000 in cash and twenty acres of ground, on what is known as "University Mound," on his Bernal Heights property, some five miles out of the city, on the San Jose road. This gift is none the less genuine, or positive, by reason of its being coupled with certain conditions of land sales, because those sales are such as the natural and inevitable growth of the city, in that direction, must bring about in a very short time. The donation is effective so soon as Mr. Brown shall have disposed of five hundred lots in the aforesaid tract, at \$200 each. The proceeds of one half of each lot are to go directly into the hands of the Trustees, as a fund, until the required number of lots are sold and the \$50,000 accumulated. Henry H. Haight, Thomas H. Selby, James D. Thornton, Dr. H. P. Coon, H. M. Newhall, F. Henderson, and other prominent citizens, have each already secured a number of these lots, which are beautiful in point of location, and toward which the city is rapidly extending. The streets on this tract are already laid out, and are named after the principal colleges of the East, viz: Yale, Harvard, Dartmouth, Princeton, etc., while the cross streets are called after the most eminent college professors, such as Alexander, Mofft, etc. When located on University Mound, which it doubtless soon will be, it will be known as the University College.

**THE HESPERIAN** for February is at hand, and is an unusually interesting number. Besides the usual patterns and pattern outlines, it also contains the representations of two of California's flora—the "Tiny Petunia," and the "Purple Wedge-spotted Evening Primrose." The descriptions are by Dr. A. Kellogg, who has done much, through the columns of the *Hesperian*, to spread before the world some of the beautiful and rare floral productions of our golden State. It is true, as the Doctor beautifully remarks "We owe the world something in return for the spread of their own local knowledge—oft-times of increasing interest as it reverberates upon a distant shore. The commonest objects to us, are new somewhere; the most trifling incidents from our heart's love, are the fragrant flowers along our path."

"The Rising of Springs and Streams, in California, before the Winter Rains," by Dr. Henry Gibbons, is a very interesting and valuable paper, which we intend to transfer to our columns. "The Golden Wedding" is another interesting paper, and will carry many a heart in California, back to the "Old Folks at Home," as the unbidden tear moistens the eyes which read the account of this "golden wedding" in the far off Eastern State of Maine.

**SHOOTING MOLTEN IRON.**—This process consists of a hollow shot of any given caliber, with a round hole or fuse in its side; on the sides of this fuse are two parallel raised lines, grooved on the inner under sides of them, into which to slide a piece of wrought iron to clean the fuse when the shell is filled. The inside of the shell must be coated with some substance, to prevent the molten iron from coming into contact with the iron of the shell. The shell can be fitted to any sized gun; when filled with molten iron it has the weight and form of a cold ball; when it strikes a solid body it will burst and the molten iron is a thousand times more destructive than a hot shot.

**TERRITORIAL ENTERPRISE.**—We are under many obligations to the Territorial *Enterprise*, published at Virginia City, N. T., for its daily supply of mining intelligence, from that important locality. The *Enterprise* is evidently a live institution, and will, we trust, long continue to occupy the foremost position among the journals on the Eastern Slope. We now and then miss receiving a number, which would be very annoying, were it not that we can always find access to its files at the Agency room of Mr. Thomas Boyce, corner of Sacramento and Montgomery, St. Mr. B. is the San Francisco Agent for this paper, and receives subscriptions and advertisements for the same.

The news from the Colorado mines is very encouraging. \$100 per foot has been offered in Los Angeles for 50 ft. in the Los Angeles Lode, (Colorado Dis.) Fifty feet sold in this city, on the 29th ult. for \$250.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Assessments upon Mining Stock have been levied as follows:—

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Carey Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Airatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norcross.—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skar, at the Mine, on or before Feb. 25.

Sierra S. M. Co.—An Assessment of \$21½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount David on Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

### ASSESSMENT SALES OF MINING STOCK.

Sales of Stock for non payment of assessments are advertised to be sold as follows:—

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Norman S. M. Co.—Sale by John Middleton & Son, 40 Montgomery Block, on Feb. 16.

### COMPANY MEETINGS.

The Lewis G. & S. Mining Co.—Annual Meeting will be held at 622 Merchant St., Feb. 12, for election of officers.

Ida G. & S. Mining Co.—A Meeting of Stockholders will be held at 522 Montgomery St., San Francisco, February 17th.

Burning Moscow.—Shares of this Company, in arrears for assessments will be sold at auction, Feb. 9.

Baltimore America Consolidated.—An assessment of 50 cents per share was levied, Jan. 5.

Savage.—An assessment of \$35 cents per share was levied, Jan. 7.

Hawley.—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

Henry Martin G. & S. M. Co.—"Thomas Wallace, Trustee," gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cts per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

Live Oak Copper Co.—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

Coso Silver Mining Co.—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

Mina Prieta S. M. Co.—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

Franco-Americano S. M. Co.—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Galan, *President* and A. S. Gould, *Secretary*. The office of this Company has been removed to No. 528, Clay street, Room No. 2.

Central Silver Mining Co.—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

Keystone Copper Mining Co. advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 16th.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

## WASHOE MINING NOTICES.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and C St., Virginia City.

Norman S. M. Co.—Middleton & Sons, No. 40, Montgomery Block, will sell delinquent stock of this Company, February 16th.

Baltic Mining Co.—Notice is given of an adjourned sale of shares in this Company, to take place on the ground, Jan. 31st.

Caution.—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

Ashland Co.—J. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

Eldorado G. & S. M. Co.—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

Texas Co.—Tennessee Ledge.—An assessment of 25 cts per foot was levied, Dec. 22, payable on or before Jan. 21 1863.

The North American Co., Gold Hill, will sell at auction Jan. 31, stock of shareholders delinquent in payment of assessments.

MARTIN WHITE MINING COMPANY.—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

THE SWEENEY Co., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

THE CHIMNEY ROCK Co., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground..

## ESMERALDA MINING NOTICES.

THE ZENOBIA LODGE COMPANY, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder.

ORE TESTS.—Several inquiries have been made to us of the different chemical tests that will discover traces of silver and copper in the rock. If our friends who are conversant with this matter will forward, information respecting such chemical tests to us, we will be happy to give them publicity. [Amador Ledger.]

Persons interested in the above will find the desired information, and much more in the same connection, all valuable to copper and silver prospectors, in late numbers of this paper. A remittance of six months or a years subscription to the MINING AND SCIENTIFIC PRESS, will afford them all the valuable information obtainable from books in relation to prospecting for either silver or copper, and assaying and testing ores of the same. The dissemination of that class of information is the speciality to which this paper is devoted, and no mineral prospector in the silver and copper regions of California can invest \$4 to better advantage than by sending the same to this office and becoming a subscriber and reader of the Press. We shall be extremely happy to receive the names of all who may favor us with cash patronage. We also pledge ourselves at the expiration of the year to refund to any party double the amount of his subscription, who may honestly think he has not got the worth of his money in valuable information from our columns.

SUBSCRIBE.—Are you a miner and not a subscriber to the MINING AND SCIENTIFIC PRESS? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the Press, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the MINING AND SCIENTIFIC PRESS. We invite all to send us their names and *four dollars, or two dollars* for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so for meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the Press for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short period.

AN IMPERIAL CITY.—The annual expenditures of New York City are \$20,000,000.

SILVER IN NOVA SCOTIA.—A letter from Nova Scotia states that, in prospecting for gold in the northern and eastern portions of the province, the writer found silver, as well as gold, in great abundance; that in every panful of earth washed from the stream he found pure metal: and veins of spar containing native silver traverse the mountains on each side of the river, and are exposed at some points along the sea-shore.

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of every thing generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This Journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 86 Names can be sent in at different times and from different Post-offices Specimen copies will be sent gratis to any part of the country.

### EWING & SMITH, Publishers,

Room 24, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER. . . . . EDITOR.

MONDAY EVENING.....FEBRUARY 9, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal. at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING. Designs of every description—Buildings, skeletons of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## NOT SO VERY STRANGE.

Much astonishment has been expressed of late, that the immense deposits of copper ore now so rapidly being developed in nearly every mining section of the State should have remained undiscovered until the present time. It is also a puzzle, "strange at least," in the estimation of one of our mountain contemporaries that "during an excitement of gold discoveries" "we seldom hear of any deposit or vein being found which does not contain gold; while a similar order of things may be noticed during silver, copper, or other excitement's."

These things are not so very strange, after all, when we come to reflect upon the lack, among our miners, of that particular class of information so essential to the correct understanding of their calling. Who that has spent any time in the mines, especially during the period prior to the Washoe excitement has not noticed, as a fact, most prominently developed, that miners of those days esteemed a knowledge of mineralogy and geology as of very little account, "especially in California," where, they said, "all pre-established rules of mineralogical science are found at fault." The practical miners of California, of the last decade, almost universally regarded with smiles of derision, the nice discriminations and distinctions of the mineralogist. They were looked upon as airy nothings, fit only for cabinet studies, and entirely without practical value in the mining field.

We would not be understood as underrating the general intelligence of California miners; for a residence of more than twelve years among them, a large portion of the time a sharer of their toils and privations, has fully taught us the fact that the world cannot produce their equal, as a class, in that respect.

So far as mining for gold is concerned, it is true there is comparatively little need of the particular information of which we are speaking; for gold working is the simplest of all mining operations ever undertaken. But recent developments have fully established the fact, which is now coming to be universally acknowledged, that every operative miner, in whatever field, should be thoroughly acquainted with the nature of the substances upon which he is daily working, or which may, fortuitously, come in his way. Such knowledge should not be confined exclusively to the overseer, or superintendent.

A very slight knowledge of mineralogy would have taught the original owners of the Comstock ledge, to have carefully examined, "the troublesome black stuff," as they termed it, which was all the time in their way while they were searching for gold in the richest silver lead now known to the world. So it has been in hundreds of instances, all over the State. Many rich silver leads are now being opened on the Western Slope, which were abandoned years ago, as worthless, because they did not show the color of gold. So it has been with the more recently discovered leads of copper, in various portions of the State.

Our mountain contemporary, already alluded to, thinks it

"strange at least," that the excitements should run in such direct lines—that is; that the discoveries of one period should be all gold, and another all silver, and another still all copper, etc. Not at all, and from the very reason already named.

After the Washoe excitement had proved a reality, "specimens" from that locality were sent into every section of the State, and miners began to run hither and yonder, in search of old abandoned claims, which they recollected had presented similar "indications" to those of the Washoe specimens. Editors throughout the State also rummaged over their old books, and printed long essays on silver mining, silver ore tests, etc. Of course the discoveries then made were chiefly silver. What did the miners know about copper? Bye and bye, somebody who had paid a little attention to mineralogy, casually stumbled upon some copper ore—knew its value, and commenced developing it. It proved valuable. Capitalists and Scientific men went out to the mines, examined them thoroughly, were satisfied of their value and backed up their knowledge by the ready cash, paid in hand to the miner for his copper ore. A new idea is evolved—new at least to the California miner—"copper specimens" begin to travel around. Another search is made for "old diggings;" "indications" are compared; the newspapers publish descriptions of the different kinds of copper ore, with directions for tests, assays, etc., and lo! a copper excitement comes up. Nothing strange, is it, that all the discoveries "about these days," should be of copper?

Our miners are gradually learning the lessons, the utility of which they smiled derisively upon a few years since. Bye and bye, they will become very good mineralogists and geologists. But they are learning these lessons very slowly, and hundreds among them are losing fortunes, by waiting for the knowledge to come to them, when they should go after the knowledge. It should be recollected that there are many other lessons yet to learn. Gold, silver and copper constitute but a portion, and we fully believe, even when taken collectively, but the smaller portion of the mineral wealth of California.

Let our readers may think that we esteem the mineral knowledge of Californians below the average standard of other countries, we will relieve them of any such impression by the following extract, illustrative of the mineral knowledge, up to a very late period, in a country where mining is now carried on to an extent and with a scientific knowledge nowhere else observed. The extract was written for the "CALIFORNIA MINING JOURNAL," published by us three or four years since:—

Some of the mining districts of Great Britain are utterly destitute of mineralogical education, and it is common to find some of the most intelligent miners only acquainted with one or two substances, which are brought prominently before them in the routine of their employment.

It is a fact that for some years lime was exported to New South Wales, where it existed in abundance in its natural state, and it is notorious that the discovery of gold in Australia was not made till after it was found in this country.

Cornwall, although it has been celebrated for its tin mines from the earliest periods of history, yet, until the last century the ores of copper were used to repair the roads, and whenever copper appeared in a vein, it was a common expression that "the ore came in and spoilt the vein," [just as the "black stuff" did in the Comstock lead, we suppose. Ed. Press.] Even when the yellow ore or copper pyrites had been long appreciated, the sulphide of copper was thrown away, and the rich black ore, or oxide of copper, was washed into the rivers.

In Derbyshire and Cumberland, although it is indisputable that lead has been smelted from the common blue ore, (sulphuret of lead) ever since the government of the Romans, yet the other ores of the same metal (white carbonates of lead, &c.) were never thought of, but left in heaps as rubbish—the public roads which had in some instances been repaired with these rejected ores, have been taken up and smelted to good account. The ores of zinc, both sulphurets and carbonate, were likewise thrown away in many of the mining districts of England until within the last few years. Blend has been mistaken for lead ore, and a blast hearth erected to reduce it, and in another case from its resemblance to a certain iron ore, a considerable quantity was bought and conveyed to one of the largest iron works in South Wales. The collection of a series of iron ores from the great London Exhibition of 1851 led to the important discovery that the road into Northampton had been cut through rich iron ore, which in some places had a thickness of twelve feet. Then they were ignorant of its value, but now it is being sent in immense quantities to supply the Staffordshire iron works.

So much having been overlooked in a country densely pop-

ulated like Great Britain whose mines now yield on an average about £30,000,000 per annum, it is reasonable to conclude that important discoveries will yet be made in this State.

The last paragraph is most emphatically prophetic, and fully demonstrative of the certainty with which accurate science leads to definite results. We may here mention that the writer of the above extract, was the same gentleman who first assayed the Comstock silver ore and introduced to our people a mineral region to which California, with all her acknowledged mineral wealth, is but the stepping stone, in comparison.

NAUTICAL MAGAZINE.—We have received the February number of this valuable publication. It is, as usual, replete with new and valuable matter appropriate to a magazine devoted to nautical science in general and the commercial interest of the Pacific Coast in particular. This publication is highly creditable to the important interest which it represents, and we know of no other man, between the two oceans, who is so well calculated to conduct such a work as CAPT. BELL—he is emphatically "the right man in the right place," and we trust he may long be spared to fill it.

Capt Bell is a man, who, from his youth up, has been ardently and earnestly devoted to the great and good work of elevating to their proper standard the character and profession of the sailor, and it is a matter of sincere congratulation that the commercial interest of this city has joined hands with him so earnestly in the work. As an important means for the accomplishment of the desired end, a large number of the leading ship-owners, merchants, shipmasters, and marine underwriters of this city have joined with Capt. Bell, in a memorial to the Legislature asking for the establishment of a Board of Nautical Education and a Marine School Ship for this harbor. The importance of such a project in an isolated commercial emporium whose rapid prospective growth is so manifest as that of San Francisco, can scarcely be estimated; and our Senators and Representatives, now assembled, will greatly neglect the interest of their constituents in this city, and indirectly of the entire State, if they fail to take the initiatory steps toward granting the memorial above alluded to.

A VALUABLE TRACT OF COUNTRY.—The value of the oil thus far obtained from the Venango, Pa. oil region is estimated at \$4,000,000, yet the producing territory is but some eight miles long, with an average width of less than forty rods. There appears to be no present prospect of diminution in the yield.

NORTH PACIFIC REVIEW.—We have received the February number of this excellent periodical. It is illustrated with a well executed and life-like portrait of Brig. Gen. Wright, the Federal Commander of this District. Its literary treasures are bright and sparkling and fully up to the standard of first class magazine literature.

## NEVADA COUNTY STOCK REPORT.

(COMPILED FROM THE NEVADA DEMOCRAT)

Under date of January 31st, the Report of the Democrat says: "The activity in copper speculations, heretofore noted, still continues, and quite a number of sales have been effected, mostly on private terms. Two shares in the Seals Copper Mine were sold yesterday for \$100 each—being at the rate of one dollar per foot. The claims of this Company are located on the main lead, near the Zinc House. A number of organized companies are engaged in opening their leads and testing their ore. Specimens of ore from Baldwin's lead, near McCarty's Ranch, assay very rich—in one instance as high as 30 per cent. The company owning this lead is known as the "Consolidated" Company.

Prospecting for copper is still being carried on vigorously. A sale of 20 feet in the Well Lead was effected on the 28th ult, at the rate of \$20 per foot, and 100 feet in the Champion Company's Lead changed hands at fifty cents per foot.

The following are the bidding and asking rates for the week ending Thursday Evening, February 5, 1863:

## GOLD QUARTZ MINING COMPANIES.

	BID.	ASKED
Seath & Clay, (per 100 feet).....	\$25,000	50,000
Weeks & Co. ....	—	—
Nevada Quartz Mining Co. (1/4 interest).....	12,000	—
Mattigny Company.....	300	—
Brickyard Company.....	50	100

## COPPER COMPANIES.

Tallman & Co.—Well Lead (100 feet).....	2,000	—
Consolidated .....	300	—
Hagadorf .....	100	—
Birdseye Gold, Silver and Copper Mining Company.....	200	—
Nevada G. S. & C. M. Co. (10 feet).....	50	—
Champion (100 feet).....	50	—

**INDICATIONS.**—Rich specimens of float rock were brought into Virginia City, Jan. 27, which were said to contain considerable silver. They were said to have been found on the road leading from Virginia to the Reese River Mines, and some thirty or forty miles this side of the latter place. Quartz of this character is said to be quite abundant in that locality but no ledge has yet been discovered.

## GENERAL MINING STOCK REPORT.

### REPORT OF SALES

At the San Francisco Mining Stock Board,  
For the week ending February 7, 1863.

Names of Companies.	Total No. Shares.	Shares per R.	Par Value.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
Ophir	16,800	12	\$300	34.5	24.50	24.50	24.50	1.600	2,600

### Coso Stocks.

The Josephine changed hands at the Stock Board, on Monday, and Tuesday at \$15, on Thursday at \$15½ and on Saturday at \$16. Willow Springs—is not quoted this week. It is held at \$40.

### Mexican Mines.

Mina Prieta—No sales is held at \$145 @ 150.  
Dios Padre was quoted on Tuesday at \$40, on Wednesday at 39 and on Friday at 37½.

SAN FRANCISCO, February 9th, 1863.

### STOCK REMARKS.

The business of the past week has been mostly confined to second and third class Stocks. Ophir and Gould & Curry have been but little dealt in. These stocks seem to have been pretty much withdrawn from the market. The amount of business for the week has been large, and at prices very considerably in advance of previous rates.

Ophir has been in steady demand, and at about last week's prices, but with a limited supply. Bids, on Friday and Saturday had materially improved. A dividend of \$48 per foot was declared on Friday; payable to-day. This dividend exceeds the expectations of stockholders.

Gould & Curry has also been very quiet during the week—very little stock offering. Prices at about last week's quotations.

Savage is still a favorite, having advanced about \$300 during the week. But little stock is offering although it is earnestly enquired for. Holders are generally confident that this mine will soon prove itself equal to the best in Virginia.

Chollar is still improving, having advanced fully \$200 since last week. The long withheld decision in its suit with the Potosi, seems to be operating in its favor. While its friends are firm in the belief of a still further advance, others look as confidently for a speedy decline. The result of the lawsuit is still anxiously awaited, and the "laws delay" most severely complained of by some.

The Potosi declines at about the same ratio with the advance of the Chollar. A few simple words from the seat of justice may, at any moment reverse the order of procession.

Charles Caney.—The Stock of this Company has taken a most remarkable upward tendency during the past week, and now, stands at one hundred per cent. in advance of its figures one week since. We are not advised of the cause of this advance unless it be a change in the management at the mine, which we believe has been effected within a short time.

Sierra Nevada has been somewhat fluctuating, advancing from \$60 to \$70 and again receding to \$62.

Wide West has been extensively dealt in at advanced rates. Antelope has advanced \$40—closing at \$50, with a scarcity of stock in the market.

Utah opened at a figure greatly in advance of previous quotations, but did not sustain itself, closing at prices but little in advance of the close of the previous week.

Real del Monte has advanced during the week from \$25 to \$30, with good demand for its stock.

### ESMERALDA STOCKS.

There has been considerable activity manifested in Esmeralda Stocks during the week and generally at prices very materially in advance of previous quotations.

### TRANSACTIONS IN SHARES.

#### NEVADA TERRITORY.

Burning Moscow—20 at \$93; 13 at 65; 43 at 70; 50 at 65; 38 at 67; 20 at 70; 19 at 69.  
Chollar—40 at \$500; 20 at 525; 20 at 560; 30 at 575; 20 at 560; 40 at 575; 4 at 575; 12 at 610; 20 at 575; 40 at 610; 20 at 630, buyer 30 days. (\$950 forfeit.)  
Cedar Hill Tunnel—10 at \$5; 5 at 3.

### ESMERALDA STOCK REPORT.

At the meeting of the Esmeralda Stock Board, held January 23d 1863, the following business was transacted in stocks, as reported in the Esmeralda Star.

Union Tunnel.—\$20 bid, 12 days, now offering.  
Utah—\$40 bid, cash, none offering.  
East Essex Ex. Urat—100 feet offered at \$10.  
Perce—12 shares offered at \$5.  
X-Eliab and Constantinople consolidated—50 shares sold at \$1½.  
Chihuahua—10 feet offered at \$12½, bid 10.  
Arcado—25 shares offered at \$10, bid 6.  
Pacific—100 feet offered at \$10, bid 5.  
Heath—25 shares offered at \$15, bid 8½.  
Old Winoanucca—30 feet offered at \$5.  
William Tell—65 feet offered at \$2½.  
Ural proper—5 feet offered at \$250, bid 200, half cash, balance 20 days.  
Gen. Jackson—20 shares offered at \$14, bid 13½.  
Fallstaff, Consolidation—40 shares offered at \$5.  
Atlantic—\$2 bid, none offering.  
[Green Backs 40 per cent discount.]

Esmeralda Stocks offered at San Francisco valuation:

Autolope	offered at \$250	Wide West	offered at \$375

Silver Hill	" 29 @ 30	Utah	" 30
Elina	" 5	Real del Monte	" 22

### TRANSACTIONS OF THE WEEK.

12 feet Alturas sold at \$15 per foot.  
25 feet Fresno sold at \$7½.  
10 feet Fresno sold at \$10.  
31 feet Pacific sold at \$4.  
For Report of January 30th, see bottom of next column.

### WASHOE STOCK REMARKS.

[COMPILED FROM THE DAILY TERRITORIAL ENTERPRISE.]

We infer from the "Reports" of the Territorial Enterprise that transactions in mining stocks in Virginia City, during the week of the market represented in our issue of to-day, have manifested an air of unusual prosperity—greater than for any similar period since last summer or fall. Considerable demand has existed, during the week, for outside claims, some of which have heretofore not been inquired for, and were unsaleable at any price. There also appears to be quite a demand for most of the prominent claims in the market, at very important advances. As yet, however, operations are chiefly confined within the means of small capitalists, and, as a consequence, transactions are light. The demand for some claims greatly exceeds the inclination to sell, at present rates. The general disposition on the part of buyers appears to be to purchase claims which have proven good, even with a pending lawsuit, rather than to chance an undeveloped mine. We append the transactions and rates of the week, up to the latest dates received.

#### TUESDAY EVENING, January 27.

Accounts from Palmyra are not so encouraging as to the extent of the mines in that locality, although recent developments indicate the existence of several claims of undoubted richness. The Beach-Paxton Co. are now taking out rock of much better quality than when near the surface. Several unimportant sales have taken place to-day.

#### WEDNESDAY EVENING, January 28th.

Flowery Hill is being talked into some favor. No ledge has yet been discovered, but thirty days, it is claimed, will solve the problem. There has been considerable life in the stock market, to-day—much bantering, much mystery, much quiet excitement, but few positive sales. There has been some inquiry for Hazel Green at current rates, and Sacramento is sought for at 60 @ 65. Wellington is also in demand at our figures of yesterday. With these exceptions, which indicate something of an advance in the stocks named, we have no important changes to note in our last quotations.

#### THURSDAY EVENING, January 29th.

Greater activity is manifested in mining stocks, to-day than has been noticed for several weeks previous. Considerable demand is made for outside claims, some of which have not heretofore had a market value, and were unsaleable at any price. The Dunn Company's stock is in good request at \$4 @ 5 per foot. The claims are said to present a much better quality of rock as depth is attained on the ledge.

Twenty feet of Hazel Green sold at \$3½ per foot. This stock has very much depreciated in the market. The appearance of the claims indicate that a higher figure might be paid with a good show of success for the buyer. Yellow Jacket is in demand at \$100 per foot. There appears to be a greater disposition on the part of buyers to purchase claims which have proven good, with a pending lawsuit, than to chance a mine undeveloped.

Twenty feet of the Union sold, to-day for \$12½. Ten feet of Birdsell sold at 20 dollars per foot. Several other sales were consummated, the terms of which are kept private.

#### FRIDAY EVENING, January 30th.

Ten feet of Sacramento sold at \$55 per foot. North Potosi is enquired for at market rates. Peytona is enquired for. Ten feet of Birdsell sold for 20 dollars per foot. Fifty feet of Wellington sold at private rates. Twenty feet of Sinaloa are reported to have changed hands at \$7 per foot.

#### SATURDAY EVENING, January 31st.

Sacramento is in demand at \$55 per foot; 30 feet changed hands at these rates. Yellow Jacket is inquired for at 110 dollars per foot, and can be sold at these figures in lots to suit the seller. This company are taking a large amount of rock from their mine, which, we are informed, is readily sold at eight dollars per ton at the dump. The Coppers and Mills Company are taking some very rich rock from their claims, resembling the best found in Gold Hill. We are not advised as to the quantity of this kind of ore, but presume it is of great extent, being the Northern extension of the Gold Hill Ledge. Waterhouse is enquired for at 3½ per foot; Gay at 2½. El Dorado is quiet, held at 60 dollars, without sales. Birdsell is held at from 22½ to 25—ten feet changed hands at 20, and finds ready sale at the latter figure. Hazel Green is offered at \$4 per foot, but there is no demand for the stock. Rock was exhibited to-day, taken from the Oriental claims, which had the appearance of being rich in silver. The rock was from a small vein verging to the ledge. The Company expect to strike the main ledge within 20 feet of this point.

La Crosse is offered at \$17 per foot. Wellington is inquired for. Several small sales have taken place in Gold Hill stocks. Claims in this district are in general demand and during the summer will probably command high figures in locations not at all prominent in the market at present.

#### MONDAY, Feb. 2, 1863.

There has been less buying in claims to-day than usual, though not without apparent indication on the part of those desirous to invest. Present holders seem determined on demanding an advance on the current rates, while the would-be-purchasers seem disposed to doubt the propriety of standing the rise.

There has been considerable demand during the past few days for Milton. Fifty feet, we are informed, sold to-day at \$60 per foot.

Several lots of stock are offered for sale to-day from Flowery District. There appears to be no demand for claims in this locality. Operations in these mines have generally proven unsuccessful.

There continues to be some demand for Dunn stock. Several unimportant sales have been effected in stocks in Virginia and Gold Hill Districts.

### ESMERALDA MINING STOCK REPORT FOR JANUARY 30TH.

The above report has come to hand just as we go to press, and we quote bids as follows:—Utah \$100; Chihuahua \$0; Ural \$500; Fallstaff \$4; Heath bid \$10; Newton \$50.

QUOTATIONS OF THE WEEK.—25 feet of Utah \$80; 25 at \$100. 25 feet Perce at \$5; 25 of Strawberry at \$10; 75 Garibaldi, Hartford, Co. at \$5.

### Esmeralda stocks offered at San Francisco Valuation—

Antelope offered at	250	Wide West offered at	370
Garibaldi	27	Utah offered at	75 to 100
Main Esmeralda	55	Elina	5
Silver Hill offered at	25		

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

## Our Mint, its Rules, Charges and Operations.

In the columns of a contemporary we observe some exceedingly interesting statistics of mint matters for many years past, from which we glean the facts that the legal limit of wastage was \$207,766 99 for the three years ending April, 1857, while the actual loss was \$266,312 86, exceeding the limit some sixty thousand dollars. During the four years of Mr. Hempstead's Superintendency, the legal limit was \$235,386 39; while the actual lost was only \$4,520 35 being some \$230,000 less than the limit, and, in fact, a little under two per cent. of the amount allowed by law to be wasted. The wastage of the Philadelphia mint is twenty-two per cent., against two per cent., wasted by our branch mint. The total expenditures for three years under Messrs. Birdsall & Lott, amounted to the large sum of \$1,019,275 39. Under Mr. Hempstead, the total expenditures for four years were but \$1,150,648 14; while the difference between the last year of Judge Lott and the last year of Mr. Hempstead was upward of \$100,000 in favor of the latter. On retiring from the Superintendency, Mr. Hempstead left an unexpended balance of appropriation due the mint of upwards of \$86,000. This certainly is a capital showing for our mint, and speaks well for Mr. Hempstead's Superintendency. Under Mr. Stevens, the present Superintendent, we have no doubt everything will work in an equally satisfactory manner.

## For parting silver from gold when gold

is below 300-1000ths. fine. . . . . 3cts per oz.  
" from 300-1000ths. to 750-1000ths fine. 7cts " "  
" " 750-1000ths to 950-1000ths " 14cts " "

## DEPOSITS SILVER BULLION—PURCHASES.

\$1.21 per standard ounce  $\frac{1}{2}$  per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
301 " 500, 7cts. " " " "

## DEPOSITS FOR FINE BARS

\$1 16-4-11ths cents. per standard ounce,  $\frac{1}{2}$  per ct. gross value of silver for making bars; also when gold is contained  $\frac{1}{2}$  per ct. on gross value of gold for coining. Refining charges as in purchases.

## BARS SOLD FROM REFINERY.

\$1 21cts. per standard oz.  $\frac{1}{2}$  per ct. gross value to be added for making bars.

## DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz.  $\frac{1}{2}$  per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

## DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz.  $\frac{1}{2}$  per ct. gross value of deposit for making bars.

## CORN AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skillful and scientific Professors of Philadelphia, and having made this branch of surgical science my specialty for nine years, enables me to operate skillfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can commend you with confidence to the citizens of San Francisco, as one of the most skillful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

## THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hacknied course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye. How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and, with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who convene there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonably.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE:—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs.

Dr. Van Zandt,

Consulting Physician and Surgeon,

OFFICE:

Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity Made Subservient for the Cure of all Nervous and Spinal Diseases

**THAT THIS PRINCIPLE**, successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanted by physicians to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

## Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

## Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

## No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

## To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complaints which they bear so patiently and so long. No social disquietude need longer afflict their lonely chambers; for he can restore the stricken energies, restore the wanted tonic of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

## Baffled the Skill of Physicians.

Devolve appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and lifelessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro-Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

## All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unassailable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or catarrhic habit of body.

## None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—wakefulness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

## The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon on our Coast, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataracts, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

## LOWER CALIFORNIA

## Colonization and Mining Company.

THE AGENTS SENT TO MEXICO BY the above Company having returned per steamer again, after having secured a tract of upwards of

**125,000 Acres**  
OF RICH AGRICULTURAL LAND,  
and a valuable silver Mine,

Company is now prepared to furnish exact information to Colonists who have already engaged, or those with the intent to engage in this

## SPLENDID ENTERPRISE.

It is proposed to send a vessel about the first of March next, and there being but a limited number of shares

NO TIME SHOULD BE LOST BY COLONISTS.

**Farmers Miners and Mechanics,**

with families are particularly invited by the authorities of the Territory. The land selected, in point of fertility of soil, is not excelled on the Continent. The climate is unsurpassed in the world. The richest silver mines known to exist in the Territory are in the immediate vicinity and bordering on the agricultural lands of the Colony.

N. B. Bear in mind that a share costs, at present, only \$200, which entitles the holder to free transportation for self, family, and articles of personal use and an equal share in the land, the Company's Silver Mine, etc. a whole enterprise, being for the mutual benefit of members only.

Full information can be had, and Mineral and Cotton specimens seen, by applying at the Office of the Company, North-west corner of Clay and Front Street.

DEVORE & CO.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms—any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,  
No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office.

## READ THIS!

COAL OIL EXPLOSION.—ON SATURDAY EVENING, while Mr. Brewster was engaged in the Summer Street House in pouring coal oil from one can to another, his wife imprudently approached with a lighted candle and the oil exploded. Mrs. Brewster's arms were badly burned, as were also the husband's hands. However, he succeeded in mastering the flame, and preventing worse consequences.—[Evening Bulletin, Aug. 4.]

Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work. All orders from the country promptly attended to.

## FREDERICK KESMODEL,

**Cutler & Surgical Instrument Maker,**  
817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1863, also in Sacramento in 1863 for California made Cutlery.

The attention of those affected with HEINIA, or Rupure, or any one interested, is called to his new method of fitting and adapting Trusses to the different case. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are uncertain and cannot be relied on and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.  
FREDERICK KESMODEL,  
Inventor and Patentee

ap3 tf

## LABOR-SAVING

**Rock Drilling Machine,**

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE and quarrymen. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

**HAND, HORSE, AND STEAM-POWER MACHINES.**

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process. Address orders to

WM. W. DUNN,  
Fremont street, bet. Market and Mission, San Francisco.

## LATEST IMPROVEMENT

**in Ladies' Buckles.**

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE Ladies of this State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address, FREDERICK REICHEL,  
Manufacturing Jeweler,  
620 Merchant street, San Francisco.

## REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL Office is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased. COPPER ORES—Highest market rates advanced in cash, for shipments to S. C. BRADSHAW, Agent, 318 California street, near Sansome, up stairs.

### 50 lbs. MARINE AND

## Fire-Proof Paint,

**MANUFACTURED BY THE PACIFIC METALLURGICAL** Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

### DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, and one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chaudlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

### 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

### DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. FORTY, Superintendent.  
WORKS, North Beach; Office, 318 California st., San Francisco.

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI.

SAN FRANCISCO, MONDAY, FEBRUARY 16, 1863.

NO. 16.

#### ESMERALDA CORRESPONDENCE.

AURORA, FEB. 9th, 1863.

MR. EDITOR:—In my letter of Jan. 30th, I promised to keep you posted in regard to our doings in this district. I have little to communicate in the way of discoveries this week, excepting the Horne Lode which was found a few days since, and is now the theme of conversation. The ore looks well, but whether it will carry the owners out of the little or big end of the horn, time alone can demonstrate.

#### THE BODIE DISTRICT.

The great excitement of the day is the Bodie District, which is situated about ten miles South-west of Bodie Creek. The new mines are just below the old diggings. A large number of well defined lodes have been staked off and recorded in the local district office. The rock is of a copper color and contains a small percentage of copper. Rock taken from the top of a number of the best newly discovered lodes assays from \$50, to as high as \$400 per ton. A new town has been surveyed and lots are held at high figures, while several new houses are in progress of construction—the present fine weather being favorable to the prosperity and progress of the new City.

#### THE TUNNELING INTEREST OF THIS DISTRICT

As has been little noticed, although it is one of the greatest importance to the prosperity of the place. These tunnels are mostly heavy undertakings and penetrate to a great length and depth into the several hills upon which they are located, thereby prospecting to a great depth all of the veins of quartz that are intersected by the course of the tunnels through the hills. This kind of mining appears to be generally overlooked by speculators, little or no enquiry being made for it, when in fact it is one of the best and safest mining investments offered to purchasers. Stock-Brokers and other mining operators have been generally backward in coming forward and taking hold of this kind of stock, for the reason that they are, as a general thing heavy and expensive enterprises, and a long period must elapse before a return can be reasonably expected from the capital thus expended. There is more solidity and permanency in the great majority of the stock of Tunnel Companies than in many Quartz Lodes which are now being sold at high rates; the local laws of this district are very liberal in their application to Tunnel Companies.

#### TUNNELS ON SILVER HILL.

On Silver Hill there are now located and in active operation, four Tunnel Companies. The first location is the Union Tunnel, situated near the base of the hill, on Esmeralda Gulch—commencing on the East side and running westward, passing through several valuable lodes. The work has steadily progressed since its location and it is now in several hundred feet. It is the oldest location on the hill, and is incorporated. One draw back to the stock of this Company is that the line of its location runs parallel with the Quartz Lodes, instead of at right angles, or nearly so, as it should do. This is the case with all except the St. Louis. Next above is the Ruth and Winsdor Tunnel, below Perry's

Mill—the right of way for 500 feet is claimed by this Company, with 2000 feet of croppings, and fifteen blind lodes, of 500 feet on each side, making in all 17000 feet of ground, incorporated, November, 1862; capital stock \$100,000; shares 1000 at \$100 each; place of business San Francisco.

On the North-west side, on Cotton-wood Gulch, is the American which was located last September, by William P. Pool & Livingston of your city (not James M. Livingston) and incorporated with a capital of \$600,000, with 1000 share of \$600 each. The company claims twenty blind lodes with the right of way for 2000 feet, and they have pushed the work forward with great energy. The tunnel is  $6\frac{1}{2}$  feet high and 5 wide, with an ascending grade of one in to each rood, and has now nearly two hundred feet of tunnel excavated. It runs at right angles or nearly so with 50 or more of the best lodes in Silver Hill. When at the distance of 1000 feet, the end of the tunnel will be at least 500 feet below the surface of the ground. The last and at the same time one of the most important tunnel enterprises on this hill, if not in the district is the Lady Gertrude. This tunnel was located, and is owned and worked by James M. Livingston, Brewster & Kinkade of San Francisco. Their tunnel penetrates the hill at the lowest point and when it reaches the Old Winnemucca, its depth from the surface of the hill, will not fall short of some 700 feet and in its course will intersect many valuable gold and silver bearing lodes. It is worked by contract, night and day, at the cost of \$10 per foot—400 feet are claimed on each side on every blind lode through which the tunnel may pass. The work of the tunnel is superintended by F. K. Becktel, Esq., a pioneer of the place, a practical miner and an honest and straight forward citizen.

#### ON MIDDLE HILL

is located the oldest tunnel in the district, as well as one of the cheapest worked and best conducted Companies on this side of the mountains. Middle Hill tunnel commences at the North end of Middle Hill, about 300 feet South of Court House Square, and runs parallel with the general course of the hill, cutting through at right angles some six'y or seventy rich and valuable quartz lodes. It has now reached nearly five hundred feet, and has passed through two most excellent blind lodes, one of which is over ten feet in thickness and prospects well in both gold and silver. The right of way is claimed for 1800 feet, and fifteen blind lodes of 2000 feet each, making a grand total of 30,000 feet of mining ground. The tunnel is six and a-half feet high and five feet wide, with one inch descending grade per rood. It was located in August, 1861, incorporated as a Joint Stock Company, in September, 1862, with a Capital Stock of \$250,000 with 1000 shares of \$250 each. On the East side of Middle Hill is also located the Montezuma, which claims similar rights and privileges as other Companies. The tunnel is an excellent looking piece of work, with a good car and car-track. It has now reached the distance of 230 feet into the hill. In my next communication I shall notice Aurora, Pennsylvania, Nevada and Discovery tunnels on Last Chance Hill, and Martinez and Lady Wealthy on Martinez Hill.

#### IRON FOR THE PACIFIC.

The rapidly increasing demand on the Pacific Coast, for that great staple of commerce—iron, renders the early establishment of furnaces for the reduction of iron ore at some convenient point on the Coast a matter of quite urgent necessity. Iron ore of a very fine quality, has been discovered in various parts of California, but, as yet, at a very great distance from steam communication with the seaboard, and at points impracticable for the delivery of coal for smelting. For many years to come, the above conditions, and the high price of labor and transportation, must preclude the possibility of California becoming a producer of iron, although she is rapidly becoming a consumer of that article.

This great commercial need, however, might soon be supplied from a neighboring State in Mexico. Recent explorations have brought to the attention of persons skilled in the manufacture of iron, an immense deposit of that ore in the "Cerro de Mercado," in the immediate vicinity of the city of Durango, the capital of the State of that name in Mexico. The ore in question appears to have formed a mountain of iron, similar in character and formation to the famous iron mountain in Missouri. Messrs Jose Subizar, Alfred A. Green and James Snegan have "denounced" the mine, according to the Mexican Laws, and thus obtained legal possession of the same. These gentlemen have forwarded to this city several hundred pounds of this ore which may be seen at this office, and which is pronounced by competent judges, as containing fully 80 per cent. of iron. The ore is exceedingly rich and quite malleable, even in its native state. It exists in inexhaustible quantities at the mine and may be easily taken out and smelted on the ground. Good coal in abundance is found in the immediate vicinity. The mine is situated only half a league from Durango, between which and Mazatlan is a good road, which in time must undoubtedly give place to a railroad.

The gentlemen above named are anxious to organize a Company for the purpose of erecting furnaces and machinery for smelting the ore and manufacturing the iron upon the spot.

Certain citizens of Durango are willing to take a large amount of stock in the Enterprise, provided the right kind of a Company can be organized, and placed under the management of citizens of the United States, and directed by persons of experience and energy, who are thoroughly acquainted with the business. There is quite a growing demand for iron in the interior of Mexico, and the facilities for its transportation to tide water are such as must give it an advantage in this market, over that produced in any other part of the world. The attention of capitalists and iron men is particularly called to the Enterprize.

SCOLDING.—It is better a woman should scold than do worse. Better for you to endure the present ill than fly to others you know not of. No one relishes the noise of scolding. But, then, scolding may have its advantages. No one likes the noise of a boiler blowing off steam; but it saves the boiler from bursting, we should be content to endure it.

## BODIE MINING DISTRICT.

This new mining district which is incidentally referred to by our Esmeralda correspondent to-day, and which has come into especial notice within two or three weeks past, is located about ten miles South of Aurora City, Esmeralda. The locality was first discovered by some Frenchmen, as early, we believe, as the summer of 1858. It was worked as placer diggings until the summer of 1860, when some of the disappointed adventurers to Washoe turned their steps Southward, and prospected along the base of the Eastern Slope until they reached Esmeralda, where they made a halt. From this place a small party went on still farther West, until they encountered the Frenchmen, above alluded to, with their rockers, washing the golden sands from the limited placers of what were thereafter known as the "Bodie Diggings." The new proprietors were looking for "indications," and were soon elated with the discovery of gold and silver bearing rock, which led at once to considerable prospecting. Barely work enough, however, was done to develop the presence of promising ore, but not enough to warrant the erection of machinery at that early period, and under the almost total lack of roads.

Matters were thus allowed to rest until some time last fall, when a Company, made up chiefly of San Francisco and Sacramento Capitalists, recommenced operations there, and with such flattering indications, that a consolidation of some eleven companies was made into one incorporated body under the name and style of the "Bodie Bluff Consolidation and Mining Company," with Governor Stanford as President, and F. K. Becktel, Esq., as Secretary. Their operations thus far have met with the most encouraging results.

About the middle of last month, the town of Aurora was all excitement with golden stories from the Bodie Mines, and "everybody" went out to see the rich strike that had been made, and came back fully satisfied that there was a "good thing" there for "somebody."

Favored by the unusual mildness of the winter the Company has been able to push on its operations with an unusual degree of vigor. About two weeks since, Mr. T. J. Hubbard, Superintendent of the Consolidation Co., according to the Aurora Star of the 31st ult, came into town with some ten pounds of very rich ore from the Company's "New Mexico" Shaft. This vein has been opened to a depth of about eighty feet, and exhibits a character of most unquestioned richness. The vein is six feet wide. Tunnels are being run into the Isadora, and others of the Company's claims which are most promising in their "indications." The Company own eleven distinct leads, the most of which are known to be very rich.

There are two other Consolidation Companies in this district, in active operation. Mills will doubtless soon be put in operation there. The nearest mills, at present in operation, are nearly six miles distant from Bodie, on the road to Aurora. Important results may ere long be expected from this new locality.

**MINERS WANTING WATER.**—Much complaint is now being made in nearly every section of the mines, at the lack of water for mining purposes. The rivers are unusually low, and many small creeks and gulches which usually furnish an abundance of water for their respective localities, during the winter months, are now almost dry. The scarcity of water the present season affords a striking contrast to the floods that poured over the country one year ago. Late advices from Lower California say that the "early and latter rains" have not yet (up to Jan. 7th.) made their appearance there, while the natives insist that the "rainy season" has fully passed.

**MINING IN NEW ZEALAND.**—Several Quartz Mills have recently been put up near Auckland, in New Zealand. The mines are said to be very rich and the leads very largely developed. At the latest dates from there, it was expected that the problem would be solved in a few days.

**THE house of a Mr. Longley, in Hopkinton, Mass.,** took fire lately in the absence of most of the male inhabitants. The ladies, therefore, got out the engine, dragged it to the fire, maned the brakes, and the fiery element soon went out in a sizzle.

## SILVER IN CARIBOO.

The British *Colonist*, published at Victoria, of a late date, claims that rich silver and gold bearing rock has recently been discovered in Cariboo. The mines have lately been visited and examined by a scientific gentleman, who fully confirms the reports. These silver veins are found on the Sougues Creek, and about fifteen miles North of Quesnelle village. Two companies have been organized, and have taken up claims. A quantity of the rock has been taken to Victoria, and it assayed from \$250 to \$300 per ton in silver and \$50 in gold, and 800 pounds of galena. The rock was from a depth of only five or six feet. It is said that the ore very much resembles that of the Comstock lead in Virginia City. It is expected that it will rapidly increase in value as it descends. The above may all be genuine, and we sincerely hope it is—but we greatly fear it will prove only the initiatory steps in the programme for another Cariboo excitement.

## WASHOE MINING CASES.

The following Mining Cases now pending before the First District Court, in Nevada Territory are set for trial as follows:—

Feb. 26—California Co. vs. Charles Anderson et als.

Mar. 10—Robert R. Moss vs. Gould & Curry Gold and Silver Mining Company.

Feb. 27—Frank Perkins vs. Sierra Nevada Mining Co.

Feb. 20—Burning Moscow Company vs. Madison Mining Company.

Mar. 12—Chollar Silver Mining Company vs. D. S. Turner.

Mar. 6—La Crosse Mining Company vs. Burning Moscow Mining Company.

**A MINING TRANSACTION.**—A miner from the mountains stepped into the salesroom of one of our most wealthy merchants, about four weeks since, stated that he was "flat broke," and asked for \$150, offering to make over to the aforesaid merchant, a mining claim for the money. The merchant, knew nothing of the man or his claim, but gave him the money and took his bill of sale. He thought no more of the transaction until a few days since, when a stranger called at his place of business and asked him if he was the owner of such a claim. Receiving an affirmative answer, the stranger offered him \$4,000 for the same. The merchant hesitated a moment when the stranger added another thousand to his offer. The merchant immediately closed with his visitor and pocketed the cash without any further remarks. The merchant is still ignorant as to whether he sold a folly or a fortune.

**LARGE TREASURE SHIPMENT.**—The treasure shipment per steamer Constitution, on the 11th, was as follows:—

To New York.....\$1,272,724 43

" England..... 907,847 86

" Acapulco..... 5,000 00

" Panama..... 5,000 00

Total shipment.....\$2,190,572 29

One million of the above was shipped on Government account.

**ESMERALDA POST OFFICE.**—Much confusion exists with regard to the proper direction of letters for Esmeralda. They should be addressed thus: Mr. —, Esmeralda, Mono Co., Cal.

There is only one Post Office in the County, and that is located in the town of Aurora. When the petition for an Office was sent to Washington, "Aurora" was named as the designation of the Office; but as that name is so common, the Department thought proper to adopt the name of "Esmeralda." It would be well, we think, for the citizens of that enterprising mining camp to change the name of the town to correspond with the Post Office. It would be more distinctive and less liable to create confusion.

**THE MINES IN CHILE.**—The silver mines of Atacama exported 800,000 ounces of silver in bars, 8,000,000 pounds of silver ore, 8,000,000 pounds of copper in bars, and 70,000,000 pounds of copper during the first eight months of 1862.

At the Annual Meeting of the Stockholders of the Melones and Stanislaus Gold, Silver and Copper Mining Co. the following persons were elected as Trustees for the ensuing year: L. Caralis, C. C. Grellet, B. E. Auger, A. C. Gay and Gabriel K. Stevnot; and at a Meeting of Trustees held the same day the following Officers were elected: El. Cazalis, President; G. Dussol, Treasurer, and L. Franconi, Secretary. Office at North-east corner of Montgomery and Jackson Streets, Room No. 16.

**THE Hope, Gold and Silver Mining Company,** situated in Prince Royal District, Humboldt County, Nevada Territory, is now fully organized. The Officers and Trustees are Sidney Johnson, Esq., President; Leon Mejjasson, Treasurer; L. Eranconi, Secretary, and Messrs. B. E. Auger, Michel Sehetard and A. Pavillier, Trustees. Office, North-east corner of Montgomery and Jackson, Sts., in Room 16.

**MARRIAGE OF M. GUIZOT.**—The somewhat romantic circumstance that led to the marriage of M. Guizot is quite generally known. We give it, however, for any one who is not familiar with it:—

Belonging to a family of distinction, but which had been ruined by the revolution, Mlle. Pauline, de Meulan had found her resources in an education as solid as it was varied, and in order to support her family she had entered the difficult and absorbing career of journalism. She was the editor of the *Le Publiciste* when a severe illness caused by overwork obliged her to interrupt occupations so necessary to the welfare of those she loved. She found herself in a critical position; she was despairing, when one day she received an anonymous letter in which the writer begs her to be at ease, and offers to perform her task during the period of her illness. This letter was accompanied by an elegantly written article, the ideas and style of which were, by a refinement and delicacy exactly modeled upon the manner of Mlle. de Meulan, who accepted the article, signed it, and regularly received a similar one till the end of her convalescence. Deeply touched by this event, Mlle de Meulan did not fail to relate her adventures in the drawing room of M. Saud, exhausting herself in enquiries, and not thinking of a pale and serious young man whom she scarcely knew, and who gravely listened as she formed all sorts of conjectures. Earnestly entreated, through the columns of the journal, to make himself known the generous incognito finally decided to go in person and receive the thanks he so well merited. It was the same young man to whom we have just alluded, and five years after Mlle de Meulan was Madame Guizot.

**REMEMBERED AND MOURNED.**—A sad and truthful picture is the following:—

For every man who falls in battle some one mourns. For every man who dies in hospital wards, and of whom no note is made, some one mourns. For the humblest soldier shot on picket, and of whose humble exit from the stage of life little is thought, some one mourns. Nor this alone. For every soldier disabled; for every one who loses an arm or a leg, or who is wounded or languishes in protracted suffering; for every one who has "only camp fever," some heart bleeds, some tears are shed. In far-off humble households perhaps, sleepless nights and anxious days are passed of which the world never knows; and every wounded and crippled soldier who returns to his family and friends, brings a lasting pang with him. Oh! how the mothers feel this war! If ever God is sad in Heaven, it seems to me it must be when he looks upon the hearts of mothers. We who are young think little of it; neither, I think, do the fathers or brothers know much of it; but it is the poor mothers and wives of the soldiers. God help them.

**A RATHER TOUGH STORY.**—A learned dissertation was held, the other evening, upon the subject of "Bed-bugs and their remarkable tenacity of life." One asserted that they could be boiled and then come to life again. Others said that they had soaked them for hours in turpentine without any fatal consequences. Old Blood, who had been listenin' as an outsider, here gave in his experience in corroboration of the facts. Says he, "Some six years ago, I took a bed bug to an iron foundry, and dropping it into a ladle where the melted iron was, had it run into a skillet. Well, an old woman used that skillet pretty constantly, and here the other day it broke all to smash, and what do you think, gentlemen, that ere insect just walked out of his hole, where he'd been layin' like a frog in a rock, and made tracks for his of roost up stairs! "But," added he, by way of parenthesis "by George, gentlemen, he looked mighty pale."

It is said that in England three hundred families contr the Government, a few thousand landlords own all the soil—five men own one fourth of Scotland, and five millions of adult men have no voice in the Government.

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Assessments upon Mining Stock have been levied as follows:—

Caledonia G. & S. M. Co. levied an assessment, Feb. 1, of 50 cents per share, payable immediately. Sale of delinquent stock will be made March 7th.

Moss G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable at 428, Montgomery St., to the Superintendent at the mine.

White Cloud G. & S. M. Co. levied an assessment of 50 cents per share, Jan. 27, payable to the Secretary, at 28, Montgomery St.

Warren G. & S. Mining Co.—An assessment of 75 cts. per share was levied Jan. 26, payable to the Supt., at Virginia City, or to the Sec., 428, Montgomery St.

Warren G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable to the Sec. in this city or to the Supt. at the mine.

El Dorado G. & S. M. Co.—An assessment of One Dollar per share was levied Jan. 23, payable to the Sec. or to the Supt.

Gaudaloupe S. M. Co.—An assessment of \$30 per share was levied, payable on or before March 1st.

El Tesora Mining Co.—An assessment of \$1½ was levied Jan. 27, payable at office on or before Feb. 27.

Polar Star G. & S. M. Co. levied an assessment of 50 cents per share, February 4th, payable on or before the 4th of March, at the Office in this city or to the Superintendent at the mine in Aurora, (Esmeralda.)

Dios Padre G. & S. M. Co. levied an assessment of 3 dollars per share, Jan. 31, payable in 30 days, also an assessment of 2 dollars per share, payable in 60 days, at office 502 Montgomery street.

Beckwith G. & S. Mining Co.—An assessment of 25 cents per share was levied Jan. 24, payable immediately.

Sonoma Mining Co.—An assessment of 25 cents per share was levied Jan. 23, payable immediately.

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Caney Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Adriatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norcross.—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skae, at the Mine, on or before Feb. 25.

Sierra S. M. Co. An Assessment of \$2½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount David-on Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

### ASSESSMENT SALES OF MINING STOCK.

North Potosi Mining Co.—Sales delinquent stock will be made March 17.

Peytona G. & S. Mining Co.—Sales of delinquent stock will be made March 1st.

Sales of Stock for non-payment of assessments are advertised to be sold as follows:—

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Norman S. M. Co.—Sale by John Middleton & Son, 40 Montgomery Block, on Feb. 16.

Burning Moscow.—Shares of this Company, in arrears for assessments will be sold at auction, Feb. 9.

### COMPANY MEETINGS.

The Lewis G. & S. Mining Co.—Annual Meeting will be held at 622 Merchant St., Feb. 12, for election of officers.

Ida G. & S. Mining Co.—A Meeting of Stockholders will be held at 522 Montgomery St., San Francisco, February 17th.

North Winnemucca G. & S. M. Co.—A meeting of the Trustees will be held at the Company's office, in this city, on Friday, Feb. 20, for the election of Officers, etc.

Baltimore America Consolidated.—An assessment of 50 cents per share was levied, Jan. 5.

Savage.—An assessment of \$35 cents per share was levied, Jan. 7.

Hawley.—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

Henry Martin G. & S. M. Co.—"Thomas Wallace, Trustee," gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cts per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

Live Oak Copper Co.—The Annual Meeting of Stockholders for election of Trustees, will be held at Office, in Montgomery Block, Feb. 2, 1863.

Coso Silver Mining Co.—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

Mina Prieta S. M. Co.—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

Franco-Americano S. M. Co.—The following persons were elected officers at the meeting of trustees, Dec. 26th—Chas. F. Gaian, *President* and A. S. Gould, *Secretary*. The office of this Company has been removed to No. 528, Clay street, Room No. 2.

Central Silver Mining Co.—The Annual Meeting for the election of Trustees will be held Jan. 13, at Office, No. 712, Montgomery street.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

Keystone Copper Mining Co, advertise for proposals to purchase or treat 3d quality copper ore. Proposals received till Jan. 15th.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and O St., Virginia City.

Norman S. M. Co.—Middleton & Sons, No. 40, Montgomery Block, will sell delinquent stock of this Company, February 16th.

Baltic Mining Co.—Notice is given of an adjourned sale of shares in this Company, to take place on the ground, Jan. 31st.

Caution.—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

Ashland Co.—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

Eldorado G. & S. M. Co.—An assessment of one dollar per share was levied, Dec. 31, 1862, payable, Jan. 22, 1863, to the Secretary, at corner of Montgomery and California streets, or to the Superintendent at Virginia City.

Texas Co.—Tennessee Ledge.—An assessment of 25 cts per foot was levied, Dec. 22, payable on or before Jan. 21 1863.

The North American Co., Gold Hill, will sell at auction Jan. 31, stock of shareholders delinquent in payment of assessments.

MARTIN WHITE MINING COMPANY.—An assessment of ten cents per foot has been levied, payable to the Secretary, at office on C Street, Virginia City.

THE SWEENEY Co., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

THE CHIMNEY ROCK Co., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Bach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

## ESMERALDA MINING NOTICES.

THE ZENOBIA LODE COMPANY, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

ORE TESTS.—Several inquiries have been made to us of the different chemical tests that will discover traces of silver and copper in the rock. If our friends who are conversant with this matter will forward information respecting such chemical tests to us, we will be happy to give them publicity. [*Amador Ledger*].

Persons interested in the above will find the desired information, and much more in the same connection, all valuable to copper and silver prospectors, in late numbers of this paper. A remittance of six months or a years subscription to the MINING AND SCIENTIFIC PRESS, will afford them all the valuable information obtainable from books in relation to prospecting for either silver or copper, and assaying and testing ores of the same. The dissemination of that class of information is the speciality to which this paper is devoted, and no mineral prospector in the silver and copper regions of California can invest \$4 to better advantage than by sending the same to this office and becoming a subscriber and reader of the PRESS. We shall be extremely happy to receive the names of all who may favor us with cash patronage. We also pledge ourselves at the expiration of the year to refund to any party double the amount of his subscription, who may honestly think he has not got the worth of his money in valuable information from our columns.

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of every thing generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$5.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

EVER & SMITH, Publishers,

Room 27, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

# Mining and Scientific Press.

W. B. EWER, EDITOR.

MONDAY EVENING.....FEBRUARY 16, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING, Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing.

JOB WORK—executed with dispatch at the cheapest rates.

PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## MINING INCORPORATIONS.

Notwithstanding the attempts at editorial pleasantry that are so frequently indulged in by our contemporaries, at the lengthening list of mining Companies, and the cumulative exhibits, of the many millions of capital which they represent, "our paper," each passing month brings additional evidence that this wealth is far from imaginary. The constantly increasing values of the figures which appear in our weekly stock reports, appended to the leading mines on the Eastern Slope, are stubborn facts, which must soon make plain to the most unbelieving that the footings of the aggregate "capital," placed as a value upon the mines now in progress of development, are not much too high. Imagination can scarcely form any adequate conception of the mineral wealth, which is soon to be developed on the Eastern Slope, and throughout the entire length and breadth of the "Great Basin," whose Western and Eastern rims are formed by the rocky slopes of the Sierra Nevada and Rocky Mountains.

Several of these earliest formed Companies, which, in the estimation of the great mass of people at that time, fixed their capital stock at an almost fabulous figure, have already reached the immediate vicinity of their incorporate value, and their stock will no doubt, ere long, be quoted at a handsome percentage "above par." Indeed, one of them has already exceeded its par value and is quoted to day at more than 60 per cent. advance.

Numerous others, second and third class mines, are making such favorable developments, at the present time, as give good earnest of an early approximation of their stock to par value.

A few years since scarcely a merchant in San Francisco could be induced to invest a dollar in any mining enterprise. To do so was to lose *caste*, and endanger one's credit "on change." Even our foundrymen, could not be induced to invest a dollar, in a business to which they were then, as now, indebted for almost their entire business. Now things are entirely changed, and one can scarcely find a man in San Francisco who does not own "feet" in some mining claim.

What matter is it if a large portion of these projected companies should fail? All, or even a majority cannot hope to succeed. A sufficient number, however, will prove so remunerative as to return a handsome aggregate percentage on all the money invested. Hitherto the chief burden and losses attendant upon opening up the mines of California, have fallen upon the mining community almost exclusively, while the commercial and agricultural interests have been greatly profited at no risk. It is one of the conditions of mining, everywhere, that many individual losses must occur, which, however, are always made good in the general aggregate of profits; and it is creditable to the mercantile interest of this city that it has now taken hold of the matter of developing the mines of the State and is freely pouring out its capital for that purpose. The aggregate of these investments cannot fail to be highly remunerative, and will reward the losers even, in the increased business which they will create and concentrate in San Francisco. This

city owes its very existence to the mines, and it betrays a feeling of selfishness in any man of means, to refuse to do his part in developing the interest upon which its prosperity depends. Every new Mining Company, whose organization is announced, is evidence that a new mine has been discovered, and that somebody intends to spend a little money for its development. Every such item is a matter of encouragement, and indicative that the great interest of the State is progressing. We trust the day is far distant when we shall fail to find in each morning's paper the announcement that some new mining organization has been effected during the previous day.

## MINING EDUCATION.

In our last issue we referred to some of the disadvantages under which the California miners, as a class, labored by reason of the lack of a proper Mining Education. We also adverted to the fact that the popular antipathy against the application of science to mining, which was so prevalent among California miners, six or eight years since, has lately been pretty much laid aside. It is now very generally conceded that an empirical knowledge of mining is not the way to succeed in that difficult and uncertain branch of industry. The occurrences connected with the discovery and development of our silver and copper mines have produced such a change in public sentiment that, at the present day, it is rare to find a man who will openly avow, even if he secretly entertains, a belief in a necessary antagonism between theory and practice. Practice and science have now joined hands in the mines, and the time has passed when the former will venture "to go it blind" in the vain confidence of shallow empiricism, unaided by science.

The attainment of a passable mining education, when proper facilities and instructors are at hand, is not a work of so much time and study as many suppose. The difficulties and mysteries involved in becoming an expert in planning and working a mine, and in acquiring a practical knowledge of their geological and mineralogical characteristics, are no greater than are to be met with in many other subjects in the usual programme of practical and theoretic education. Experience is the foundation of success in all human undertakings; but the only value of experience is the facility which it affords us to deduce from previous results, a knowledge by which to overcome new or greater difficulties. This is identical with the inductive process of the man of science. But he that confines himself to his own limited experience, shuts his eyes against the lights of science; and, in despising the experience of others, he will soon find himself buried in the darkness of empiricism, while those who have entrusted him with their business will surely behold their undertakings enveloped in a labyrinth of difficulties, which must sooner or later result in common and promiscuous ruin.

A large mine is a complicated machine, and we might with quite as much propriety place a ploughman, with no mechanical experience, whatever, in charge of a double cylinder printing press, as to place a man, whose experience in mining is confined to what he has done himself, in charge of a mining operation of any magnitude. The art of mining involves a general knowledge of mechanics, surveying, mineralogy and geology. To understand working a mine—boring, sinking, pumping, winding, stoping, hauling and ventilation a tolerably correct knowledge of every leading principle in mechanics is needed. Without such knowledge the miner will find it impossible to decide upon the most economical means and arrangements for transport either in the mine or on the surface, the kind and capacity of engines needed, or the character and class of machinery best calculated to perform the work before him. Laying out the work properly, each part with reference to another, requires a knowledge of surveying. To ascertain the proper place to sink shafts, involving calculations of the dip and strike of strata, probability of water, faults, &c., implies a knowledge of geology: while by the aid of mineralogy only, can he determine the nature and value of the minerals upon which he is working, or which may chance to come in his way. On a correct conclusion with regard to each and all these points depends the success of the undertaking. The employment of experienced men with liberal salaries, to superintend works of this description may safely be predicted as uniformly resulting in larger dividends to stockholders, and increased safety to mine and workmen. Experience, coupled with a

proper application of science, is the only foundation of fitness for the position of Mining Superintendent. The lack of these requisites has cost English adventurers millions of pounds sterling—sometimes in the faulty opening of a mine, at others in the lack of mineralogical knowledge for determining the value and character of the mineral when found. We gave several instances of the latter in our last issue, we might multiply instances of the former *ad infinitum*.

It is to the lack of this latter information that we must attribute the delay in the development of the silver and copper mines of the State, a full decade beyond the time when their existence should have been known as the result of actual explorations.

There is but one way to remedy the evils here passed in review and provide our State with a competent corps of mining engineers and superintendents—*A School of Mines must be established under the patronage, and partial control of the State.* An institution of this kind is absolutely necessary to a proper development of our resources. We need it as a collector and conservator of mining knowledge past and progressive. We need it as an institution for the general diffusion of information in this branch of industrial science. We need it as a place where the working miner, the proprietor and the engineer may be drilled and schooled in the art of mining, in all its bearings. Such schools have long been in existence in nearly every country in Europe, where they are fostered with the greatest care by the different governments. We shall endanger our reputation as a progressive people if we much longer delay a movement in this direction. The losses of property and misdirected outlay of capital already scored up, (to say nothing of the sad loss of life,) and laid at the door of inexperience, would have literally endowed half a score of such schools.

Our State Geologist, in his address before the Legislature two years ago, advised the early establishment of such a school. We have now a Legislative Committee on Mining. Is there any more important matter which can come before them than that which we are now discussing? Have they ever thought seriously upon it? If so, or if not, heretofore, why would it not be well, at the present time, to prepare the general outlines of a plan for such an institution, and let it go before the people, with a legislative endorsement, for future consideration.

Legislators are quite too prone to think that when they have enacted laws for the creation and collection of revenue, for the collection of debts and the punishment of crime, and, perchance, performed the herculean task of electing a United States Senator, they have fully discharged their legislative duties. They forget that there are other equally, if not more important duties to perform, in providing the means for properly educating the adult industrial class of society. This is universally done in Europe, at least to an extent sufficient to provide competent directors for all the great industrial interests of the land. We have neither time nor space to say more under this head than what will be merely suggestive; but we hold that it is quite time our Legislators should take this matter under consideration, and initiate some steps toward an ultimate accomplishment of the end in view. The present "let alone" policy must inevitably continue to result in serious losses, both to individuals and the State, and we shall be fortunate indeed, if our chief industry is not thereby soon completely buried in the darkness of that empiricism in which it is already so sadly floundering.

## COPPER MINING.

A celebrated geologist says:—"Give me a good Copper Mine, and I will not ask for silver or gold." That geologist was a sensible man and knew when he had a "good thing." What proportion of the numerous copper mines, that are now being opened, in various portions of the State, will prove "good" or remunerative, it is impossible, at the present time to foretell; but enough has already been developed to prove that the copper mining interest must soon become of great importance to the State. There appears to be a belt of country, some eight or ten miles wide, rich in ores of copper, and extending along the middle portion of the foothills from the extreme Southern portion of the San Joaquin valley, as far North as Feather River. Another, and apparently extensive field, has been discovered, embracing a large portion of Del Norte and Klamath counties and extending thence into Oregon. In our issue of January 12th,

we gave some statistics showing the profits of mining for copper in veins which assay from 15 to 20 per cent., proving conclusively that such veins must soon become very valuable. Copper ore that will assay 20 per cent. is worth about \$120 per ton in New York. An advance of at least \$50 per ton can be obtained on all such ore in this city. A well defined copper mine, that will assay 22 per cent. and so located that its ores can be laid down in San Francisco, for \$15 per ton, is really worth as much as the richest gold and silver mine in Washoe—Gould & Curry and Ophir not excepted, provided the mine is capable of turning out the same amount of rock as the Washoe mines.

## GENERAL MINING STOCK REPORT.

REPORT OF SALES  
At the San Francisco Mining Stock Board,  
For the week ending February 14, 1893.

## Coso Stocks.

The Josephine changed hands at the Stock Board, on Monday, at 16 1/2, on Tuesday at 16, on Thursday at 22, on Friday 25; on Saturday at 26 1/2. Willow Springs was quoted on Monday at \$20, on Wednesday at 25, on Thursday at 22 1/2 and on Friday at 25. Coso changed hands on Thursday at \$10, on Friday at 13 and on Saturday at 16.

## Mexican Mines.

Mina Prieta sold on Friday for \$135, and on Saturday at the same figure. Dios Padre was quoted on Monday and Tuesday at \$40, and on Friday at 30.

SAN FRANCISCO, February 16th, 1893.

## STOCK REMARKS.

The Mining Market, for the week, has manifested a fair degree of activity notwithstanding the unfavorable condition of the weather much of the time. The disposition to operate in second and third class stocks, appears to be increasing. Esmeralda is also coming in for a fair share of attention among operators in this city. Our Stock Report from that district will be found full and reliable, and presents a very encouraging indication of the progress and value of the mines in that locality.

Ophir is without any material change. With some little fluctuations in the interim, the Stock Board closed the two last weeks with the same figures—\$3,600. The recent influx of water to that mine, has been overcome. It proceeded, as we intimated it possibly did, from a new vein of ore, which had been struck in the drift being driven westward. The ore is pronounced rich. If so, and the vein should prove, as is thought it may, to be the "Virginia," the late purchase of that Company's mine must prove of great advantage to the Ophir Company. Gould & Curry has been but little dealt in during the past week—the Stock however remains firm at last quotations. \$100 per foot is offered for the next dividend. It is rumored that this Company has withdrawn its ores from all outside mills, for what purpose is not known outside of the Directors.

Chollar has received a material check in its upward tendency, and has been subjected to great fluctuations during the week. Sales have been effected as low as \$350 and from that up to \$550 has been paid.

Potosi, at the close of the week, rallied from its low rates of the previous two days and now stands firm at \$20 advance.

The Charles Canby is still advancing, although wavering a little at the close of the week, notwithstanding the intelligence of the settlement of its suit with the Danby Co., by accepting 100 feet of the 180 feet in dispute. This piece of ground was known to be valuable, and the loss of 80 feet of good ground need cause no uneasiness to stockholders, especially as operations are in progress which will, in all probability, soon develop a large extent of the Company's ground always supposed to be valuable, but until recently thought to be out of reach, except by extraordinary expense. The present Superintendent of the mine is a man of energy and one thoroughly acquainted with his business.

Wide West shares have experienced further fluctuations. They opened at \$350, fell to 320, but rallied at the close of the week to \$335.

## NEVADA COUNTRY STOCK REPORT.

[COMPILED FROM THE NEVADA DEMOCRAT.]

In consequence of the snow and late stormy weather, but little has been done the past week in the way of prospecting. When the snow has passed away, operations that have been temporarily suspended will be again resumed. There appears to be no abatement of the copper excitement, and new leads are constantly being discovered. An extensive copper lead running through Perrin's Ranch, on Wolf Creek, has lately been brought into notice. The lead has been taken up for a distance of 14,000 feet, and three different companies are now engaged in prospecting it. The leads are usually prospected by organizing a company of from twenty to sixty shares, and levying an assessment of from one to two dollars on each. Where the leads are so situated that they can be opened by sinking shafts or running tunnels, thus avoiding the expense of a steam pump, the cost of prospecting does not exceed one or two hundred dollars. Thus it can usually be ascertained whether the ore will pay for working, at a trifling expense. We hear of no sales worthy of note.

## TRANSACTIONS OF THE WEEK.

20 shares Ural sold at \$500.  
25 shares Strawberry sold at \$20.  
25 shares General Hooker sold at \$10.  
20 feet Peru sold at \$10.  
13 shares Heath sold at \$10.  
20 shares Brazil sold at \$5.  
25 shares Fresno sold at \$0.  
25 shares Bodie Bluff consolidation sold at \$17.  
75 feet Garibaldi lode, Hartford Co., sold at \$20.  
20 shares Bamboo sold at \$75.  
10 feet Bright Star sold at \$12.  
10 feet Bright Star sold at \$15.

The Examining Committee of the Esmeralda Stock Board, after a careful examination and average assay of the rock from the Ural Gold and Silver Mining Company, on Last Chance Hill, have recommended that ledge to be classed by the Board as among the No. 1 ledges. The assay reads as follows:—

Contains, in Gold per ton of 2000 pounds.....\$104 40  
Contains in Silver, per ton of ore.....169 30

Total yield per Ton.....\$173 70

## WASHOE STOCK REMARKS.

[COMPILED FROM THE DAILY TERRITORIAL ENTERPRISE.]

TUESDAY EVENING, February 13d.

There is rumor of a ledge being struck about six miles west of this place, which is said to be prospecting well in gold and silver. Steps have been taken by the first locators to develop their claims by sinking a shaft on their lead. Several extensions have already been taken up.

Some of the old locations in the Argentine District have lately been revived, and several new ones made. The past efforts of miners to develop the mines of this district have, without exception, proved failures. Present labors appear, we are informed, indicative of better results.

Several sales have taken place in Milton stock, at \$100 per foot. Sacramento is quiet; held at \$55 to 60 per foot. Ten feet of Birdall sold at \$23 per foot. Ten feet of Union sold at \$13 per foot. 25 feet of Sinaloa sold at \$7 1/2 per foot.

WEDNESDAY EVENING, February 14th.

Fifteen feet of Union Company changed hands at \$13; 20 feet Zouave at 5; 25 feet of Sinaloa at \$7 1/2; 15 feet of Pride of Washoe at 15.

THURSDAY EVENING, February 15th.

Several new prospecting operations have been commenced in the vicinity of Gold Hill, some of which bid fair to result profitably to those engaged. Late developments in this District appear to have inspired the miners with renewed confidence in the permanency and extensive range of these mines. 25 feet of Dunn sold, to-day, at \$3 per foot; 15 feet of Union sold at 13—this stock is in demand at 12. Four dollars is offered for Zouave. This company suspended operations on their claims several weeks since, which have not been resumed—hence the great depreciation of their stock in the market. Milton is offered at \$100 per foot—no sales. Sacramento is offered at 60 without sales. Fifteen dollars is offered for Pride of Washoe. Fifty dollars is offered for Buchanan.

FRIDAY EVENING, February 16th.

Some activity was manifested in stocks to-day, though but few sales effected. Some enquiry has been made for Sacramento; also for Shamrock. The Perseverence (late Kahoe) company have struck rock in their claims rich in both gold and silver. They expect to strike the ledge in a few days, at a point much deeper than where the rich specimens are found at present. Potosi is enquired for at current rates. Sales unimportant.

SATURDAY EVENING, February 17th.

Less activity appears in Stocks to-day than at any other time during the week. Few new stocks have been offered, and sales limited. The new discovery about six miles West of this place, mentioned under date of Tuesday last, and which caused considerable stir at the time, does not appear to amount to much.  
Two feet of Pride of Washoe sold at \$16 per foot; 19 feet Birdall at 20. A few other transactions have been made to-day, in outside stocks, at low rates.

NEW DISCOVERIES.—New discoveries have been made East of Humboldt, which, according to reports are marvellously rich. If they are anything like what is reported, we shall hear more from them soon. We are not given to sensation items and prefer to be a little behind time, rather than to give currency to unreliable reports.

**SUBSCRIBE.**—Are you a miner and not a subscriber to the **MINING AND SCIENTIFIC PRESS**? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the **PRESS**, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the **MINING AND SCIENTIFIC PRESS**. We invite all to send us their names and *four dollars, or two dollars* for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so far meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the **PRESS** for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short period.

#### SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the **MINING AND SCIENTIFIC PRESS PATENT AGENCY**. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

#### Our Mint, its Rules, Charges and Operations.

For parting silver from gold when gold is below 300-1000ths. fine. . . . . 3cts per oz.  
" from 300-1000ths. to 750-1000ths fine. 7cts "  
" " 750-1000ths to 950-1000ths " .14cts "  
DEPOSITS SILVER BULLION—PURCHASES.  
\$1.21 per standard ounce ½ per ct. on gross value of all gold contained for coinage.

Refining charges (only where gold is contained) proportion of gold 1 to 300, 3cts. per oz. gross weight  
301 " 500, 7cts. " " "

#### DEPOSITS FOR FINE BARS.

\$1 16-4-11ths cents. per standard ounce, ½ per ct. gross value of silver for making bars; also when gold is contained ½ per ct. on gross value of gold for coining. Refining charges as in purchases.

#### BARs SOLD FROM REFINERY.

\$1 21cts. per standard oz. ½ per ct. gross value to be added for making bars.

#### DEPOSITED FOR DOLLARS.

\$1 16-4-11ths. per standard oz. ½ per ct. gross value for coining, when gold is contained, refining charge the same as in purchases.

#### DEPOSITED FOR IMPORTED BARS.

\$1 16-4-11ths. cents per standard oz. ½ per ct. gross value of deposit for making bars.

#### CORNS AND BUNIONS REMOVED.

DR. BYRON C. KENNEDY, practical CHIROPODIST, late of Philadelphia, would most respectfully inform the citizens of San Francisco that he has opened his office at No. 12 Montgomery street, opposite the Lick House, where he is prepared to remove all excrescences, such as Corns, Bunions, Inverted Nails, Enlarged Joints, Swelled Insteps, Frosted Feet, Chilblains, Callosities, and all diseases of the Feet, without pain or inconvenience to the patient.

Dr. Kennedy also attends to Ganglion, or Scorbatic Ulcers, and all other diseases of the Skin. He may be consulted at his office, No. 12 Montgomery street, opposite the Lick House, from 9 to 12 A. M., and 2 to 6 P. M. Having devoted six years of study to this important, but too much neglected, branch of human knowledge, and having studied anatomy under the most skilful and scientific Professors of Philadelphia, and having made this branch of surgical science his speciality for nine years, enables me to operate skilfully and successfully. In England, France and Austria the highest prizes are often awarded to practitioners in this branch of surgical science, and it occupies with others an equally lofty position in the profession.

Voizin is an illustrious example, a shining light, among the philosophical stars of Europe, and Dr. Byron C. Kennedy has fully equaled him in this country, as a proof of which the Faculty of the University College of Philadelphia, Pa., complimented him with testimonials.

Dr. Kennedy has bent his earnest attention to the cure of these diseases, in which he has become so great an expert that he is now regarded as the leader in this country, in this branch of the profession, throughout the United States.

The following letter, which emphatically speaks for itself, was written by Dr. W. L. Stevens of the University College of Philadelphia:

DR. BYRON C. KENNEDY: Dear Sir—Learning that you are going to take your departure for California, and wishing to inform the citizens of Philadelphia and also the people of the State of California the esteem in which we hold you, and knowing that nothing is more essential to your success than the encouragement which you may receive from the people of Philadelphia, in the midst of which is the playground of your boyhood, and knowing that you have devoted years of study to this important but too much neglected branch of human knowledge; that you have attained to the highest rank in your profession, several of the Faculty and other prominent citizens of Philadelphia having submitted to your manipulation, we can recommend you with confidence to the citizens of San Francisco, as one of the most skilful surgeons of the age, and we hope your success may be such as will repay you for your years of study, and that you may find a broad field for your exertions in the new and growing city of the Pacific.

#### THE EYES! THE EYES!! THE EYES!!!

DR. E. H. PARDEE,

Oculist and Aurist to the San Francisco Deaf, Dumb and Blind Asylum.

After a protracted blindness of more than five years, Dr. PARDEE has made himself thoroughly and scientifically acquainted with all diseases of the Eye, and is now practicing with a success that cannot be surpassed in the United States; and as proof of this he substantiates by many cases now in California that have been cured by him, after having exhausted the skill of the eminent physicians and oculists of New York city, Boston and Philadelphia.

From an extensive practical knowledge of more than 14 years, Dr. Pardee asserts, and is prepared to prove, that there has been more blindness from bad and improper treatment than from disease itself—how can it be otherwise when we take into consideration the effects of the old hackneyed course of local treatment that patients undergo—Caustic to-day and Bluestone to-morrow—more painful than death, and always more tedious than the disease. Patients are daily presenting themselves with chronic cases, and on inquiring what had been formerly done, the almost invariable reply is, "I had my eyes burned with caustic or bluestone;" "I was bled and blistered, then cupped two or three times a week—had a blue pill prescribed for me at night, and salts in the morning—was ordered in a dark room—to keep my eyes tightly bandaged—to avoid the open air and exercise," with fifty other inconsistencies, the aggregate of which is sure blindness. Patients should be careful and not place their eyes at the mercies of a man who does nothing but burn them daily, not investigating the circumstances of each particular case, but ignorantly and blindly adopting and following theories the most erroneous, and destructive to the eye.

How much more rational and consistent to consult an experienced Oculist, who thoroughly understands every disease of this tender organ in all its aspects and varieties. Dr. PARDEE has from sixty to one hundred patients under his daily supervision, and with but very few cases, they have all been treated by other physicians before applying to him—and all to no benefit. Those who are doubtful are permitted to call at Dr. Pardee's office and confer with the many patients who converse there between the hours of 9 and 12 in the forenoon. The Dr. has a large and only assortment of Artificial Eyes on this coast, inserted, having all the movements of the real eye, and that they look so life-like that no one can tell them, when properly inserted, from the real eye. These eyes are sold reasonably.

All the operations performed, such as "Strabismus," or cross-eyes—"Cataracts"—or removal of the Lens by absorption or extraction—"Pterygium," or fleshy membranes growing over the eyes. Artificial Pupils, &c.

OFFICE—Clay street, above the Plaza—opposite Plaza Hotel—old No. 217, up stairs. aug14.

Dr. Van Zandt,  
Consulting Physician and Surgeon,  
OFFICE:  
Corner of Washington and Sansome Streets.

The Great Success of this Century, as an Aid to Practical Medicine.

The Mysterious Problem of Material Nature, Electricity Made Subservient for the Cure of all Nervous and Spinal Diseases

THAT THIS PRINCIPLE, successfully applied to diseased states of the system, is to prove the great sought-for necessity, long wanting by physicians to aid their medicines in overcoming organic and functional derangements of the human body. It is a part of the great principle of vitality known as nervous influence and necessarily must have much to do in obviating diseased action.

#### Too Much Cannot Be Said

In its praise; for it is highly probable that in health there is an exact equilibrium of the ELECTRIC principle; and should this secret and hidden equipoise of health be broken or lowered—should the body be negatively electrified when it should be positively charged—is not the current broken, and is there not a war of forces going on in our system? This needs correcting and in order that the tissues of the body should be susceptible to remedial agents we must first restore and

#### Awaken the Magnetic Life Within Us.

The spinal and sympathetic nerve systems. Believing as I do most firmly in this great magnetic or electrical intensity of the earth, with its influence upon our bodies in health and disease, I am led to take advantage of the press, through which to awaken attention to the subject, that good may come to all.

#### No Compromise with Disease.

Give the body strength, and nature will relieve herself. Purify the life blood, render the stomach, liver, heart, kidney and all the natural functions active by ELECTRICAL excitation, and at once the aged, the palsied, the nervous, the dispirited, the melancholic, the dyspeptic and the invalid revive under its benign influence.

#### To the Ladies of California.

Dr. Van Zandt's success with complaints of women, both in family and office practice, is owing to his correct views of the origin of all their maladies. Ladies can consult him with entire confidence, as he is no speculator upon human ills—but is proving himself the only member of the legitimate profession in California who is really successful in removing those ills which are the peculiar province of the sex. His high appreciation of their delicately attuned nervous organism, together with their great sympathetic life, renders him doubly able to assuage those silent complainings which they bear so patiently and so long. No social disquietude need longer afflict our home circles; for he can arouse the stricken energies; restore the wretched tonicity of the body; awaken the melancholic and desponding; arrest those drains which cause so much anxiety; cure those protean maladies which have so long

#### Baffled the Skill of Physicians.

Develop appetite, life and animation, dispel nervous headache, sinking at the stomach, wandering pains, wasting away of strength; extreme debility and listlessness, hectic cough, sleeplessness, unpleasant dreams and that general depression of life's powers, which go to render her life a misery and death a boon. Dr. Van Zandt, with his new method of exciting the Electro Galvanic current, together with his remedial measures which are adapted to the necessities of California, will assure you of a complete and radical recovery of all bodily and mental infirmities, and will restore you to usefulness, and spare you a blessing to your family and to society.

#### All the World Over

wherever disease exists, whether special to the soil and climate or common to all regions—epidemic or casual, acute or chronic, contagious or non-contagious—it is as necessary to restore the ELECTRO-GALVANIC equilibrium, especially in California, as it is to give food to the starving. This statement is based upon a series of facts extending through many years, and verified by hundreds of patients; so that no principle of science, no rule of experience, no result of any well known cause, rests upon more sure and unsalable foundations, than those which underlie the world-wide reputation of Electricity for the cure of all nervous states of the body, faulty digestion, mental and physical debility or prostration, coughs, asthma, wandering pains of a rheumatic, gouty or mercurial character, and all forms of disease, the result of scrofula or caecetic habit of body.

#### None Need Despair of Relief.

If you have ulcers which will not heal—pains that cannot be removed—melancholy which you cannot shake off—loss of power which you cannot regain—depression of spirits which weigh you down—weakness that knows no sleeping—business that languishes for want of energy—a void which no society can fill—suspicion which no assurance can allay—Go to Dr. Van Zandt, for his great success, and the safety with which he administers his new method of Electrical excitation, together with his remedies, which are adapted to the requirements of climate and constitution, will assure you a radical removal of all bodily and mental infirmities, within the scope of science and man to remove.

#### The Eye and Ear Diseases.

It must not be forgotten by the eye and ear sufferers that Dr. Van Zandt has made these afflictions an especial study, and that he is the only Surgeon on our State, who has a diploma for that branch of practice. Very many of the eye and ear troubles are purely deranged nervous actions, and are cured by his electro-galvanic battery—as amaurosis, squinting, cataract, floating specks before vision, twitching of the eyelids, nervous deafness, roaring and buzzing noises in the ears, giddiness, etc. All operations successfully done on those delicate organs of sense.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency. The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,

No. 10 Naglee's Building.

All orders from the country promptly attended to.

## FREDERICK KESMODEL,

Cutler & Surgical Instrument Maker,

817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupure, or any one interested, is called to his new method of fitting and adapting Trusses to the different case. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horn, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves. FREDERICK KESMODEL, Inventor and Patentee

ap8 tf

## LABOR-SAVING

## Rock Drilling Machine,

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE and Quarrymen. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

## HAND, HORSE, AND STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc. one man performing the labor of three in the ordinary way.

A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory references will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process. Address orders to

WM. W. DUNN,  
Fremont street, bet. Market and Mission, San Francisco.

## LATEST IMPROVEMENT

## in Ladies' Buckles.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE Ladies of this State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trinkets.

Orders from the country respectfully solicited. For particulars call at or address, FREDERICK REICHEL, Manufacturing Jeweler,  
620 Merchant street, San Francisco.

## REMOVAL.

OFFICE OF THE PACIFIC METAL-urgical Office is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent,  
318 California street, near Sansome, up stairs.

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name. feb6 N. K. MASTEN, Secretary pro tem.

## P. M. S. CO.

**PACIFIC MAIL STEAMSHIP COMPANY'S** line to PANAMA, connecting via the Panama Railroad with the steamers of the Atlantic and Pacific Steamship Company at Aspinwall.

### FOR PANAMA.

The following Steamships will be dispatched in the month of February, 1863.

**February 1st, Steamer Sonora.**  
 " 11th " **Constitution.**  
 " 21st " **St. Louis.**

Will leave Folsom Street Wharf, with Passengers and Treasure, for Panama

AT 9 O'CLOCK, A. M., PUNCTUALLY,

And connect, via Panama Railroad, at Aspinwall, with teamships for New York.

For Freight or passage, apply to

**A. B. FORBES, Agent.**

Feb 4 Corner of Sacramento and Leidesdorff sts.

## TO THE CLOCK TRADE.

WE HAVE RECEIVED, EX RECENT FLEET OF CLIP-PERS, a fine assortment of the

**NEW HAVEN COMPANY'S,**

(FORMERLY JEROME)

## CLOCKS,

Comprising all the Desirable Styles. [Also a Large Lot of

**Fancy Time Pieces**

OF NEW AND BEAUTIFUL PATTERNS.

We shall in future be in receipt of sufficient quantities of the above goods to supply our largely increased trade.

**HAYNES & LAWTON, Agents N. H. Clock Co.**  
 Nos. 616 and 518 Sansome st., cor. Merchant,  
 Jan 26 1863 San Francisco.

## SQUARZA'S PUNCH.

### FIRST PREMIUM

AT THE SACRAMENTO AGRICULTURAL STATE FAIR FOR 1862.

### ALSO; FIRST PREMIUM

At the San Francisco Bay District Agricultural Fair, 1862

MANUFACTORY, WHOLESALE AND RETAIL,

**No. 44 Leidesdorff street,**

Opposite the What Cheer House, San Francisco.

## V. SQUARZA'S Punch Factory.

**MR. SQUARZA IS FAVORABLY** known in this State for his Anti-Divorce Liqueur and similar productions, as manufactured by him. We may mention that Mr. Squarza is an fait in the chemico-distilling science, hence the celebrity of his articles. He has two establishments for the sale of his famous Punch—one on Leidesdorff, the other on Montgomery street—which are constantly thronged with our bon vivants.

The following is a list of his liquors, all of which we have tasted, and find them the most delicious and harmless beverages in this city, being pure, and unadulterated with drugs or other injurious chemicals:

Rum Punch,	Strawberry Punch,
Cognac do.	Whisky do.
Arac do.	Kirschwasser do.
Anti-Divorce Punch,	Cocoa
Coffee do.	Morning Comfort,
Tea do.	Kuennel.
Pineapple do.	Brandy Cocktail,
Anisette,	Anti-Hyspersia Bitters,
Kirschwasser,	Ladies' Tears.
Appetizer,	

And CHAMPAGNES of all brands.

## PEOPLE'S

## Steamship Line!

CONNECTING

**CALIFORNIA AND NEW YORK,  
VIA NICARAGUA.**

**750 Miles Shorter than any other Route!**

The Fast and Favorite Double Engine Steamship,

**MOSES TAYLOR,**

**E. HOWES** ..... COMMANDER,

Will be dispatched for

**San Juan del Sur,**

From Mission street Wharf,

Punctually at 9 o'clock, A. M., on

**WEDNESDAY, - - - MARCH 11. 1863.**  
 Connecting at GREYTOWN with the Splendid Steamship  
**ILLINOIS**.....3500 Tons.

Reduced rates of Passage and quick trips are secured by the re-opening of the Nicaragua Route.

These Steamers are unsurpassed for speed, cleanliness and safety, and every effort will be made to insure the comfort of passengers.

For further information apply to

**I. K. ROBERTS, Agent,**  
 No. 407 Washington Street, opp. Post Office.

## DONAHUE'S

**Union Iron and Brass Foundry,**

CORNER OF FIRST AND MISSION STREETS, SAN FRANCISCO.

**The First Established in the State.**

**MANUFACTURE STEAM ENGINES, SAW AND GRIST Mill Machinery, Boilers, Quartz Stampers, Amalgamators, etc., etc., at reduced prices.** Have now the largest and best assortment of Gear and Machinery Patterns in the State, a list of which will be forwarded to anyone desiring it, free of cost.

PETER DONAHUE.

## LEWIS COFFEY AND RISDON,

**STEAM BOILER AND SHEET IRON WORKS.**

The only exclusively Boiler Making Establishment on the Pacific Coast Owned and conducted by Practical Boiler Makers. All orders for New Work, the repairing of Old Work, executed as ordered, and warranted as to quality.

Old Stand, corner Bush and Market Streets.  
 Opposite Oriental Hotel, San Francisco, Cal.  
**LEWIS COFFEY J. N. RISDON.**

## GREAT REDUCTION

IN PRICES.

## STANFORD BROTHERS,

**121, 123 and 125 California Street,**

*Keep the Largest Stock of all Kinds of*

## Lamp Stock

**And will Sell Cheaper than any other House in this State**

LAMPS, CHIMNEYS,

WICKS, CAMPHENE,

BURNING FLUID,

ALCOHOL, COAL OIL,

TURPENTINE, KEROSENE OIL,

COMET ILLUMINATING OIL,

SPERM OIL, LARD OIL,

MACHINERY OIL,

## Holiday Presents!

IN

WATCHES,

DIAMONDS,

JEWELRY AND

SILVER WARE,

AT

## BRAVERMAN & LEVY'S,

**621 Washington Street,**

WE CALL THE ATTENTION OF OUR FRIENDS AND the public in general to our well assorted stock of

**JEWELRY AND SILVER WARE,**

Of the latest and Most Fashionable styles, which we have received by the last Steamer. ALSO,

**FRENCH CLOCKS,**

AND

**PRECIOUS STONES,**

Which we are selling, SET or UNSET, at the very LOWEST PRICES.

**BRAVERMAN & LEVY,**

No. 621 Washington Street,

Facing Maguire's Opera House.

Dec 29 1862

## LEANDER RANSOM,

**Civil Engineer**

AND

## SURVEYOR,

Having been connected with the public works of the State of Ohio for 20 years, and the public surveys of the State of California for 7 years.

ALSO

## STATE LOCATING AGENT.

And as such having the sale of

**600,000 ACRES OF STATE SCHOOL LANDS,**

**At the low price of \$1.25 per Acre.**

Terms.—Twenty per cent in cash and the balance on a credit of several years.  
 OFFICE: Second floor of Express Building, N.E. corner of Montgomery and California streets. oct-3m

## Agency For Patents.

THE UNDERSIGNED having been long established in the Patent Agency Business, and having favorable arrangements for attending to the interests of inventors at the Patent Office in Washington, offer their services for the securing of Caveats and Patents also, will attend to the sales of Patent Rights, and to all matters connected with patented inventions.

**WETHERED & TIFFANY,**

Office, 410 Montgomery street.

**CHARLES R. BOND, (Late City and County Assessor.)**

## REAL ESTATE AGENT,

**No. 410 Montgomery street, San Francisco.**

REAL ESTATE PURCHASED AND SOLD, AND LOANS NEGOTIATED.

## For Sale Cheap!

**A HORIZONTAL STEAM ENGINE OF** 4-Horse Power, Flue Boiler, in excellent order, capable of driving a ten stamp mill, for sale at half its original cost. Apply to

**JULIUS SILVERSMITH,**  
 Federal Building, cor. Battery and Washington Sts  
 Room, No. 23.

## DEETKEN'S

**Chemical and Metallurgical Works,**

On San Bruno Road, Islais Creek,  
 SAN FRANCISCO.

**CLEAR GOLD BEARING SULPHURETS WORKED AT \$20 PER TON.** ALL THE GOLD EXTRACTED BY Chemical process. Yield of Sulphurets from 30 to 50 per cent higher than the BEST AMALGAMATION PROCESS. **\$25** Apparatus for separating Sulphurets set up by experienced hands at a cost of \$50 to \$100, if desired by mill owners. No power nor clean water required for her purpose. nov8-3m

## SQUARZA'S PUNCH.

**HOME MANUFACTORY.**

WHOLESALE AND RETAIL,

**No. 44 Leidesdorff St., near Sacramento.**  
 Branch at 408 Montgomery street. my30

## JULIUS SILVERSMITH,

**Commissioner for Nevada Territory,**

**OFFICE, IN LATE STATE CAPITOL,**

Corner of Battery & Washington streets.  
 Room 23, up stairs.

WE WOULD RESPECTFULLY SOLICIT FROM THOSE who have business relations with the above named Territory, a share of their patronage in all matters requiring the official action of a Commissioner—such as the drawing up of affidavits, acknowledgments, the taking of testimony, etc.

## JAMES PHELAN,

(LATE J. & M. PHELAN.)

**IMPORTER AND JOBBER,**

**Wines, Liquors, Etc., Etc.,**

**Nos. 616 & 618 Front street,**

Between Jackson and Pacific Streets,  
 Established 1849. SAN FRANCISCO.

All Goods Guaranteed. Orders Solicited.  
 TERMS LIBERAL. Jan. 1-1863

## THEODOR KALLENBERG,

**Maker of Models**

**FOR INVENTORS.**

**MACHINES, MATHEMATICAL, Optical and Philosophical Instruments, Scales, Weights, etc.; Steel Stamps, Dies and Die Sinking, Embossing Stamps.** Repairing of Machinery promptly attended to.  
**No. 4 Sansome street, corner Market,**  
 aug.31m San Francisco.

## PALMER, HANSCOMB & CO.,

**GOLDEN STATE FOUNDRY**

**AND MACHINE WORKS.**

**First Street, near Market, San Francisco,**

**RESPECTFULLY SOLICITS ORDERS for all kinds of R MACHINERY, for Mining and other purposes** Please send Plans and Specifications.

Having the most complete arrangements and appointments for finishing and executing any and all kinds of Castings and Machinery on this Coast.  
 San Francisco, November 29, 1862. 3m

## 50 lbs. MARINE AND

## Fire-Proof Paint,

**MANUFACTURED BY THE PACIFIC METALLURGICAL** Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

### DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.  
 For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

### 25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

### DIRECTIONS:

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,

G. T. Fouque, Superintendent.  
**WORKS, North Beach; Office, 318 California st., San Francisco.**

A JOURNAL OF MINING, AGRICULTURE, MANUFACTURES, SCIENCE, ART, CHEMISTRY, INVENTIONS, ETC.

VOL. VI.

SAN FRANCISCO, MONDAY, FEBRUARY 23, 1863.

NO. 17.

## RANKIN'S IMPROVED SCHOOL DESK.

By the arrangement represented in the accompanying cut, two or more School Desks are connected by a longitudinal beam or board, and firmly held together. The following advantages are claimed for this arrangement:

1. The series of Desks thus formed stand very firm on the floor, without being in any manner fastened to it.
  2. They can be removed at pleasure by adults, in a few minutes, with little or no expense.
  3. They present fewer obstacles to the use of the broom than any desk in use.
  4. They furnish much less occasion for noise than other school desks, by presenting less surface for the feet to strike against.
  5. They are superior also to other Desks, in regard to the convenience of getting in and out of them with ease.
  6. The arrangement of the book-shelf, (as seen in the front desk in the cut, where the writing board is broken away) by which a separate place is provided for the slate and atlas, and less room allowed for miscellaneous articles, has been found by experience to be a great convenience. It saves noise and promotes neatness.
  7. In appearance they are neat and when properly made, even elegant.
  8. The central longitudinal beam separates the two scholars in each desk, thus giving to the arrangement one of the principal advantages claimed for single desks.
  9. They are simple in construction, and easily made "at home" by any good workman; put together with screws, can be taken apart and boxed.
  10. They can be more easily adapted to particular tastes and circumstances, as regards height of seat and writing board, inclination of the seat and back, etc., than any that are supported by castings.
  11. They are in general firmer and more durable than desks that require to be fastened to the floor by screws or nails.
  12. They are much cheaper than any other good desk—costing, ordinarily, not more than one half as much.
- That these statements are true, must be apparent to teachers and others who have had much experience in using and furnishing school rooms; and if they are true, it is equally plain that the advantages obtained by this arrangement are very great, and that it has good claims to the notice and favor of all who may desire to assist in improving the appearance of our school rooms, and promoting the comfort of pupils and teachers.

The desks, or the right to use this invention, will be furnished on very favorable terms on application to

WARREN HOLT,  
305 Montgomery street, San Francisco.

**LARGE CAPITAL.**—The Great Western Railway (England) is about amalgamating with two other companies, when the whole capital will be \$210,000,000.

NEW AND IMPROVED SCHOOL DESK.

PATENTED FEBRUARY 18, 1862, BY J. S. RANKIN.

## NOTES ON THE COPPER MINES OF AMADOR COUNTY.

There are three distinct veins running through this section of the country. The first is about three miles from Ione City, in the direction of Jackson, running in a Northernly and Southernly direction. According to reports these veins or ledges as they are called, continue their course from Copperopolis through Campo Seco and down to Clarksville in El Dorado. Some time ago I visited the two last celebrated mining camps. But my knowledge of the geology of the country, would scarcely allow me to come to the conclusion that in Amador County they have the exact ledges that are running through Calaveras County. But of this I am certain, that along the whole of this distance, the ground is taken up for copper mining, and in many places a very considerable amount of work has been done. But very few, however, have been so successful as to strike the copper-bearing rock; still they have strong faith that they will soon do so, and no amount of dollars would induce them to give up their claims.

The first mining camp that I visited was that of Dr. Newton. He has out at his mine about 100 tons of fine ore. On this claim considerable amount of work has already been done; they have sunk down until they have arrived to the depth of about 170 feet. At the depth of about 90 feet they were so fortunate as to strike the copper-bearing lode, which was twelve inches in width, and down along the whole depth they have had moderately good ore. Sometimes the lode would seem a little less, but in a little while it would again swell out to eighteen or twenty inches. On descending the shaft I observed that in some places it had a width of two feet six inches. At the bottom of the shaft they have now two feet nine inches on one side and two feet on the other, of moderately good shipping ore. It will be observed from the above that this company have got a lode of copper for the depth of about eighty feet. Rather than give an opinion of the value of the above mine I let it speak for itself. It is evident that this mine is capable of being worked on a very extensive scale, if properly managed. I

trust that they will sink deeper, so that it may become known whether we have our lodes running deep or not in that section of the State.

To the South of this claim, ground has been taken up in the name of the Oak Hill Mining Company. They are sinking a shaft here at a distance of about 500 feet from Dr. Newton's shaft, but as yet they have not struck any copper indications.

In the immediate neighborhood of this last mine there are two others sinking down upon the same indications. They are named Rutledge, and Doty claims. The first shaft is the best workmanship that I saw in this camp. The Doty boys are working in very hard ground, but now and then the mundic contains specimens of copper pyrites that would assay some

10 or 12 per cent. of copper.

Having heard some time ago that there was considerable excitement toward Jackson, I resolved to visit this place; but I could not find that any rock presented to me contained any indications of a copper lode. I was told that the whole belt of the country was taken up for five miles, for copper. I was on some of the ground, but did not see anything attracting to my eye.

The next district I visited was the one known as the "Horse Creek" district. There they have sunk about forty feet. The indications which induced them to strike here were some green carbonate and silicate of copper cropping out. They have met with but very little success as yet. In one or two places, while sinking, they came upon some boulders of quartz, containing bunches of copper pyrites.

I visited two more copper claims still in a southernly direction. They are respectively called the Reed Mining Co. and the Boulder Hill Mining Co.

On the other vein, called the Hornblend lead, about half a mile in the direction of Jackson, there are several claims taken up; but very few with any success. In one instance they say they have the sure thing, having struck good indications of a silver lode, the rock giving, they protest, all the acid tests of silver, viz.: dissolving in nitric acid, decanting the clear liquid—a copious white precipitate was formed, which precipitate was the tetroxide of antimony and not chloride of silver. I found that several parties had fallen into the same error. Some time, Mr. Edrorn, in a future number, I will give you a few hints on the fallacy of the chloride of sodium put for silver.

The Randall is another claim which also promises to be a good mine. They have sunk here some twenty or forty feet and are now on a thick vein of mundic, containing considerable sulphurets of antimony and copper. Some of the specimens I took up would assay about four or five per cent. in copper. They have to fight hard with the water at the bottom.

From here I went some miles in the direction of the Cosumnes River. I came to a Ranch called Stanley's Ranch. Here a fair company had been organized and had taken up

some 2,000 feet upon a ledge. The outcroppings on this lead bring heavy masses of hydrated peroxide of iron containing small quantities of the green carbonate of copper. Several claims had been taken up upon this lead—both in a northerly and southerly direction. I visited two of the northerly extensions, called Groat & Walker Claim, and the Cossumnes River Claim. Both of these claims promise to turn out well. I saw some very rich specimens of the red oxide of copper and also some silicate of copper, reported to have been obtained from a claim on the extension of the Cossumnes River claim. There must have been considerable quantities of it, since wherever I would go, nearly all the way from this place to Sacramento, I found specimens of the same kind, all being reported as brought from the above mine.

There is also considerable excitement about copper ore in the neighborhood of Rich Bar. The copper here is the sulphuret very much mixed with quartz. The ore is of a very fine quality, but of very little value, as it is too much mixed with gangue—probably the ore may concentrate as they sink down. About six miles from this place is a town called Puckerville. Claims have been taken up here, also on Gregg's Ranch. On one claim they have sunk down about six feet and have struck a very strong vein of mundic; but the mundic does not contain the smallest piece of copper.

Thus ended my visit to the Amador copper mines.

If you travel along the hills, wherever you see a rock you will also find a notice that it is claimed as copper ground. Should *two per cent.* of the taken up claims prove to contain copper in working quantity, Amador will soon become one of the richest copper mining countries in the world.

#### IMPROVED SCHOOL DESKS.

We would call attention to the representation, on our first page, of an improved School Desk, recently patented by J. S. BARKIN. The enumeration of its advantages, given in immediate connection with the illustration, fully sets forth its superiority over any other description of Desks in use. We have also seen testimonials of its great utility, signed by all the leading School Officials and Teachers in this city; also from the numerous prominent Teachers and others engaged in Educational interests in the Eastern States, where this Desk is being very generally introduced. County School Superintendents and School Trustees throughout the State should give this new School Desk a careful consideration. Its advantages in every point of view must be apparent to every one who will carefully examine it. Rights to construct the same can be obtained on reasonable terms by addressing WARREN HOLT, No. 305, Montgomery Street, San Francisco.

THE "Notes on the Copper Mines of Amador County," which will be found upon our first page, were prepared by one of the most thoroughly practical Mineralogists in the State. We have the promise of further communications from the same gentleman—Notes upon other Copper Mines, and some practical articles on assaying and ore tests, which will be found, very valuable to the miner, and prospector.

CLASS IN CHEMISTRY AND ASSAYING.—By reference to a card in our advertising columns, it will be noticed that a gentleman of this city proposes to open a class for instruction in Chemistry and Assaying. The gentleman is a man most eminently qualified for taking charge of such a class, having had long experience as a practical Assayer and Chemist.

A rare opportunity is here presented for persons engaged in or contemplating any connection with mining enterprises to acquaint themselves thoroughly with a knowledge of minerals and their resulting metals.

MAP OF SINALOA.—We have received from Henry Payot No. Washington Street, a finely executed Map of Sinaloa, Mexico. Sinaloa is located immediately below the State of Sonora, its Western boundary resting upon the Gulf of California and its Eastern extending just beyond the Coast Range of Mountains, some 35 or 40 miles inland. These mountains are highly metaliferous, and contain a great number of abandoned Mines which are now being reopened with great encouragement of future success. Parties interested in that section, or desirous to become acquainted with it, should provide themselves with a copy of this valuable Map.

#### MINING EDUCATION.

In the leading article of our issue of the 9th inst. we introduced an extract from a paper communicated to the CALIFORNIA MINING JOURNAL, some three years since, and entitled "The Advantages of an Extended Knowledge of Mineralogy to the California Miner," by M. Attwood, Esq., of Grass Valley, wherein the writer expressed his belief, founded upon scientific data, that important discoveries in other metals than gold, would soon be made on this Coast. The discovery of silver, soon afterward, on the Eastern Slope, and subsequently in various portions of this State, added to the still more recent, and wonderful discoveries of copper, have most remarkably verified the correctness of his prediction, and afforded additional evidence of the value of science in the mines. Since the issue aforesaid our attention has been called to a communication in the Sacramento Union, under date of Nov. 2, 1859, in which the writer quotes a portion of a private letter written by Mr. Attwood, a short time previous, giving the result of his observations while on a visit to the Ophir Mine. We give the extract:—

I did not make as careful and close an examination of the ground above the vein as I could have wished; indeed, from the confusion existing, and from one formation passing into another, to work out the geology properly would require time. The course of the vein appears to be a few degrees west of magnetic north, dipping westward at an angle of about forty-eight degrees, *but the dip being a false one, you may not sink far before it will change.* To the westward of the vein, and at no great distance, is a large 'dike vein,' (the upper quartz ledge I mentioned in my correspondence) [now known as the "Virginia Ledge"—Ed. Press] the direction of which is parallel with your vein, but the inclination or dip, contrary, or to the eastward, so that your vein might continue its present dip westward till intersected by the Dyke vein. The formation adjacent to the vein is a partially decomposed felspathic porphyry.

Mr. Attwood is a mining engineer and mineralogist, and thoroughly acquainted with every department of mining engineering. His knowledge in this department of science enabled him to again predict the existence of a fact in regard to the Ophir mine, buried several hundred feet beneath the deepest opening at that time made, and one directly contrary to every surrounding indication when considered by an unscientific mind. Without any hesitation, he wrote at a time when the mine had only been opened to a depth of about 15 feet: "The dip [of the vein] being a false one, *you may not sink far before it will change.*" Since that date, upward of three years have passed away and the workmen in the Ophir mine have gone down to the depth of 210 feet and demonstrated the exact truth of what the application of science to an undeveloped mine had foretold. It is now known that the Ophir mine which dipped at the surface about 48 degrees to the West, has in less than 200 feet changed its dip to about 60 degrees East. In other words its present dip at the lowest point reached is nearly at right angles with its dip at the surface. This change in the angle of the dip has caused the extraordinary dilated appearance of the vein in the middle and lower galleries.

Had the Ophir Company at the outset of their work determined to sink a shaft, say 500 feet deep through which to work their mine, and employed a man not thoroughly skilled as a mining Engineer, to locate the same, he would most undoubtedly have been governed by surface indications and located the shaft at a point, from which at the required depth of 500 feet he would have found himself several hundred feet distant from the vein after arriving at the point where he expected to intersect it, and constantly increasing that distance as he progressed downward. Thousands of dollars are annually thrown away by the miners of California from the lack of proper engineering knowledge in this very matter of locating shafts and tunnels. Millions of dollars have been thus uselessly expended in the English mines, and it was not until quite recently, and after the most earnest appeals of scientific men to mining adventurers in that country, and a presentation of the convincing facts of enormous losses proven to have arisen from a lack of proper mining knowledge, that the adventurers could be induced to employ competent and properly educated men as mining engineers. As late as 1836, \$50,000 was expended in sinking a single shaft for coal, near Northampton, at a point where even the most superficial knowledge of the dip of the strata, would have proved the impossibility of success. The first shaft

sunk at the Haswell colliery by inexperienced adventurers was abandoned after expending \$300,000. A scientific survey subsequently pointed out the true locality for sinking, when the work was recommenced and resulted in a complete success at a trifling cost, in comparison with the first attempt. Numerous other particular instances involving perhaps less pecuniary losses than those above enumerated might be pointed out, which have proved equally barren of results, from this same persistency in ignoring the utility of a proper education, on the part of those entrusted with mining engineering.

California, or rather the Pacific Slope, is just entering upon a system of mining enterprise, which in extent and value will soon vastly exceed that of any other portion of the globe; and the question is certainly a most pertinent one, whether we shall call to our aid the collective experience and wisdom of the past to assist us in the enterprise, or whether we shall go on, as we thus far have done, and still insist in blindly incurring the heaviest pecuniary penalties for the want of adequate geological and mineralogical knowledge. The merchants and capitalists of San Francisco, who do not own a dime in any mining enterprise are deeply interested in this question, from the fact that the more successful we are in our mining operations, the more rapidly will they extend, and in the same ratio build up this city and increase the value of our trade and traffic and our investments in real estate.

You who are venturing your hundreds or thousands of dollars in the various mining operations of the day are most deeply interested in the question. Are you willing to intrust operations in which your capital is involved, to incompetent hands? Would you not, rather, while we are yet in the infancy of mining operations, contribute something from the State's revenue, if necessary, to prepare those upon whom the future direction of our mines are to devolve, for a proper management of them? We may get along passably well with the few competent men we now have among us, perhaps for three or four years, or until we can establish a proper Mining School and send out a class of graduates who will be fully able to undertake the management of such mines, as are growing more and more complicated in their characteristics and developments, and, as a consequence, all the more in need of experienced and skilful men to take them in charge.

It is our intention to still continue the discussion of the important question of Mining Education, and in future numbers, we shall endeavor to lay before our readers, some practical plans for the establishment of schools where the science of mining—practical as well as theoretical—may be taught.

It would afford us pleasure to bring these facts to the attention of our Legislators, but the inclination of the legislative wisdom of the State seems to be turned to other channels than a study of our great leading interest—at least, it is so, if we are to judge them by the selection of newspaperial reading furnished by the State's liberality, in which the only exclusively mining press in our State has been almost entirely ignored. In this great matter of State interest, one of more vital importance to the commonwealth than any other which is likely to come before the Legislature during the balance of its session, not a single paper except the Press, has yet uttered a word. We intend to send a few copies to the Legislature *gratis*, while we are discussing this matter, hoping they may be received kindly, even if the subject to which we desire to call their particular attention may not be considered of sufficient importance for Legislative action.

#### WASHOE MINING CASES.

The following Mining Cases now pending before the First District Court, in Nevada Territory are set for trial as follows:—

- Feb. 26—California Co. vs. Charles Anderson et als.
- Mar. 10—Robert R. Moss vs. Gould & Curry Gold and Silver Mining Company.
- Feb. 27—Frank Perkins vs. Sierra Nevada Mining Co.
- Mar. 12—Chollar Silver Mining Company vs. D. S. Turner.
- Mar. 6—La Crosse Mining Company vs. Burning Moscow Mining Company.

# MINING AND SCIENTIFIC PRESS.

**THE STATE GEOLOGICAL SURVEY.**—Since the article under his head in another column, was put in type we have noticed an article in the *Evening Bulletin*, showing that the most creditable degree of industry has been manifested by the members of the Survey in prosecuting the work committed to their charge. Surveys have already been made in all the counties of the State but seven. The publication of the Reports and Maps now in a state of great forwardness, cannot be made until the proper appropriations are made therefor \$20,000 is now due the Survey for moneys already appropriated, but not paid for lack of funds. The field work during the last year has been carried on by Mr. Whitney at his own individual expense and there is now due him \$15,000 for such services. The *Bulletin* says:—

The time when the first annual report should have been made was at the meeting of the Legislature last year, but the Act was then amended, and Mr. Whitney authorized to combine his first and second reports into one, and lay the same before the present Legislature, and \$3,000 was appropriated for publishing 1,000 copies of the said reports. Owing to the vacuum in the State Treasury, however, so far as meeting the requirements of publishing the geological survey was concerned, not a dollar of the above appropriation has yet been received by Mr. Whitney; consequently there will be no reports this year.

We trust that the conclusion of the *Bulletin* may prove correct. The matter will soon come before the Legislature, and it is to be hoped that body will devise some means to spread before the people the valuable facts collected by the Survey.

**IMPROVED STEAM BOILER.**—Joseph Harrison, Esq., of Philadelphia, has recently invented and patented a steam boiler, which, it is said, is commanding high favor among engineers. Mr. H. was a partner of the Winans Brothers, of Baltimore, in their contract with the Russian Government for keeping in repair the great railroad from St. Petersburg to Moscow. He is now in Europe, whither he has been called by several skillful mechanics with the view to the introduction of his patent boiler on that continent.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Assessments upon Mining Stock have been levied as follows:—

Caledonia G. & S. M. Co. levied an assessment, Feb. 1, of 50 cents per share, payable immediately. Sale of delinquent stock will be made March 7th.

Moss G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable at 428, Montgomery St., to the Superintendent at the mine.

White Cloud G. & S. M. Co. levied an assessment of 5 cents per share, Jan. 27, payable to the Secretary, at 28, Montgomery St.

Warren G. & S. Mining Co.—An assessment of 75 cts. per share was levied Jan. 26, payable to the Supt., at Virginia City, or to the Sec., 428, Montgomery St.

Warren G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable to the Sec. in this city or to the Supt. at the mine.

El Dorado G. & S. M. Co.—An assessment of One Dollar per share was levied Jan. 23, payable to the Sec. or to the Supt.

Gaudaloupe S. M. Co.—An assessment of \$30 per share was levied, payable on or before March 1st.

El Tesora Mining Co.—An assessment of \$1½ was levied Jan. 27, payable at office on or before Feb. 27.

Polar Star G. & S. M. Co. levied an assessment of 50 cents per share, February 4th, payable on or before the 4th of March, at the Office in this city or to the Superintendent at the mine in Aurora, (Esmeralda).

Dios Padre G. & S. M. Co. levied an assessment of 3 dollars per share, Jan. 31, payable in 30 days, also an assessment of 2 dollars per share, payable in 60 days, at office 502 Montgomery street.

Beckwith G. & S. Mining Co.—An assessment of 25 cents per share was levied Jan. 24, payable immediately.

Sonora Mining Co.—An assessment of 25 cents per share was levied Jan. 23, payable immediately.

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Caney Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Adriatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norecross—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skae, at the Mine, on or before Feb. 25.

Sierra S. M. Co. An Assessment of \$2½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount Davidson Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

Hale & Norecross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and C St., Virginia City.

Baltimore America Consolidated.—An assessment of 50 cents per share was levied, Jan. 5.

Savage.—An assessment of \$35 cents per share was levied, Jan. 7.

Hawley.—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cts per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

Mina Prieta S. M. Co.—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

### ASSESSMENT SALES.

Sales of Stock for non-payment of assessments are advertised to be sold as follows:—

North Potosi Mining Co.—Sales delinquent stock will be made March 17.

Peytona G. & S. Mining Co.—Sales of delinquent stock will be made March 1st.

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

### GENERAL NOTICES.

Caution.—D. M. Tyrell warns persons against purchasing a certain 10 foot of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

Ashland Co.—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

Coso Silver Mining Co.—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

Henry Martin G. & S. M. Co.—"Thomas Wallace, Trustee," gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

THE SWEENEY CO., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

THE CHIMNEY ROCK CO., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

## ESMERALDA MINING NOTICES.

THE ZENOBIA LODE COMPANY, give notice that they claim a superior title to the Johnson Co., claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. F. Dorsey and James Elder,

**ORE TESTS.**—Several inquiries have been made to us of the different chemical tests that will discover traces of silver and copper in the rock. If our friends who are conversant with this matter will forward information respecting such chemical tests to us, we will be happy to give them publicity. [*Amador Ledger*].

Persons interested in the above will find the desired information, and much more in the same connection, all valuable to copper and silver prospectors, in late numbers of this paper. A remittance of six months or a years subscription to the MINING AND SCIENTIFIC PRESS, will afford them all the valuable information obtainable from books in relation to prospecting for either silver or copper, and assaying and testing ores of the same. The dissemination of that class of information is the specialty to which this paper is devoted, and no mineral prospector in the silver and copper regions of California can invest \$4 to better advantage than by sending the same to this office and becoming a subscriber and reader of the Press. We shall be extremely happy to receive the names of all who may favor us with cash patronage. We also pledge ourselves at the expiration of the year to refund to any party double the amount of his subscription, who may honestly think he has not got the worth of his money in valuable information from our columns.

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80. Names can be sent in at different times and from different Post-offices. Specimen copies will be sent gratis to any part of the country.

EWER & SMITH, Publishers,

Room 27, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## Mining and Scientific Press.

W. B. EWER, . . . . . EDITOR.

MONDAY EVENING . . . . . FEBRUARY 23, 1863.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, - - - - - Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOTYPING and ELECTROTYPING. Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seals for Plain or Colored Printing. Job Work executed with dispatch at low rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

## MINING—LEGITIMATE, SPECULATIVE AND SENSATIONAL.

Under the most favorable circumstances, and under the best and most legitimate management, mining for the precious metals, including copper, must be essentially speculative. No amount of knowledge, either theoretic or practical, or even the most judicious combination of the two, can at all times tell us where the ore is; indeed we can only approximately know where it is *not*, beyond actual exploration. We can only say, in view of any contemplated operation, "there is a strong probability that there is a rich mine here or there—or there is but little prospect that one will be found in this or that locality." The very nature of the business renders it speculative.

## LEGITIMATE MINING.

Ordinary mining adventure, to be legitimate, should be kept within certain recognized limits. Notwithstanding the great uncertainty necessarily attendant upon all mining undertakings there are, however, certain principles accepted—the results of the experience of ages—which, although they may be without the limit of perfect scientific definition, and consequently subject to no fixed laws like legitimate commercial transactions, still they are capable of constant application, and, when judiciously applied will approximate mining adventure very nearly within the limits of certainty. Legitimate mining can no more be held responsible for the failure attendant upon unskilled or speculative operations, than can legitimate mercantile transactions for the wild and disastrous operations of visionary speculators.

Mining, however, being, as we have already stated, necessarily speculative; in isolated operations, of course, those who adventure, if reasonable men, will be prepared to incur occasional losses, where they had most confidently looked for the fullest success. Taking, however, the class of legitimate operations in any given district, as a whole, the result will uniformly show very large balances of profit. It is in consequence of this very fact that mining everywhere becomes such a fruitful field of speculation. Brilliant mining successes can find no parallel, in their ratio of profit, in any other industrial pursuit.

Of course the chances or prospects of any proposed adventure must be, to a certain extent, a matter of mere arbitrary opinion, and upon which even those most competent to judge must be expected to differ. In a matter where mere opinion enters so largely, and where the limits of probable success are so incapable of definition, it is natural, that even the most careful adventurer should often involuntarily slide into a grade of

## SPECULATIVE MINING.

Speculative mining may be represented as a "sliding-scale" of operations graduated all the way, from a nearly legitimate undertaking to one entirely devoid of principle, and so reckless in its character as to render absolutely criminal any attempt to enice into it an outside or not thoroughly posted party. This is the class of operations most detrimental, in its general results, to legitimate mining, and the one which involves issues of the highest importance to

the growth of all mining enterprise. Speculative mining, of the most uncertain character, is often openly entered upon in good faith, by the adventurers, in response to the morbid gambling propensities so deeply engrafted in human nature, everywhere. This reckless class of mining, although it may be conducted openly and fairly, with a full disclosure of the vastly preponderating chances against success, is nevertheless, most pernicious in its tendency—the brilliant successes now and then attending it, operating like the leading prizes in lottery schemes to induce thousands to invest their last dollar in a "chance," hoping that "luck" may favor them for once.

Speculative mining also includes that peculiar class of operations which are gotten up like Peter Piuder's Razors—to "sell." These mines are usually merely nominal in character. They sometimes have a locality on some wild cat "extension," sometimes not, in which latter case they are purely speculative, with a mere paper existence—nothing more, nothing less—just sufficient to give the concern a legal existence upon the record. Such things always have, and always will exist, so long as legitimate mining affords a basis for such illegitimate operations. Operators, sellers and buyers in such stocks are to be classed with thimble riggers and their dupes. Honest men will not engage in them. Intelligent men cannot be duped by such shallow pretences. It will be a long time ere the world will be purged of villains or fools.

## "SENSATION" MINES.

A new class of bogus mining has come into note, which has been most aptly termed "sensational mines." To manage well a sensational mine requires considerable tact and judgment. It must also have a certain extent of substantial basis on which to be "managed." The mine is usually a pretty good one, and one which, if its mineral value should be kept within proper bounds would be a productive one to work. But the "sensational" operator has no idea of working his mine—not at all. He has struck a "good thing." His knowledge of mining assures him that it is but a "pocket" or "chimney" or mere chance and limited deposit of some kind. His purpose is not to sell a mere worthless thing for a large sum of money—but to sell a "good thing" for five or six times what it is worth. Having decided upon his "base of operations," the sensational operator begins by calling attention to his wonderful "discovery," which to the judgment of the inexperienced outsider does really appear most wonderful. Such being the case there is no difficulty in obtaining favorable reports, from even very respectable agents. By the various means of puffing, exhibiting specimens, etc., an excitement is easily gotten up and daily increased as the number of buyers is augmented; each new purchaser becomes in turn elated with his fortunate speculation, until the shrewd originator of the scheme has got rid of all his stock. Of course when a working company has been fairly organized and active operations commenced at the mine, the bubble bursts.

Under the head of Sensational Mining should also be ranked the "Bulling" and "Bearing" operations so common among Brokers and others in every important community, where stock operations occupy anything like a prominent position in business transactions. Instead of acting simply as brokers and advising their clients to buy or sell in whatever they consider advisable within the range of mining adventure, it has become a not unfrequent practice among this generally useful class of men to combine together in cliques for the purpose of working up to "sensational" prices certain stocks, for speculative purposes. We fear that such transactions are not altogether unknown on Montgomery Street. The facility with which this may be done is well known to the "initiated." Perhaps this class of sensational operations is as frequently resorted to as any other, and rarely fails of being successful, when properly managed. This evil is not of recent growth. Both here and in Europe it has been a source of heavy and grievous injury to legitimate mining operations. Evils of the various characters which we have passed in brief review are unavoidable in any mining community; but however much they may affect individuals they should never be charged to the account of regular operations. Mining as an investment, when confined within its legitimate limits, will show quite as large balances of profit as any other business, and as a source of national wealth and strength is second to no other industrial pursuit.

## THE STATE GEOLOGICAL SURVEY.

We understand that a determined effort is to be made in the present Legislature to defeat the annual appropriation for the continuance of the important work of the State Geological Survey. As an evident feeler in this direction we notice a communication in the Evening Bulletin, of Wednesday last, complaining of the apparent inaction of the commission, and more than intimating that no practical results are to be derived therefrom. The writer may be honest in his conclusions, but if so, he is evidently misinformed as to the magnitude of the work before the Commission, and the time required to collect and classify the observations, in such a manner as to bring out the practical information sought for in its establishment. Considering the influences under which Government appointments are usually made, the inviolable system of favoritism which almost universally obtains, we have reasons for believing that the State has been most fortunate in securing the services of the eminent gentleman who stands at the head of the Commission. By general accordance of the scientific world Mr. WARRINGTON SMYTH, of England, and J. D. WHITNEY of the California Survey, rank respectively, as first and second, among living men in the particular sphere of practical geology—especially as applied to mines and mining. The State of California will take a most unfortunate step backward if it fails to continue, to a complete issue, the work which we believe has been so systematically commenced by Mr. WHITNEY. Our people and the Legislature may rely upon it, no irritating system of derogation, or dread of being charged with dilatoriness, or "theorising," will deter this gentleman, so long as he holds the position to which he has been assigned, from proceeding with his work in a manner commensurate with the importance and intricacy of the undertaking. He will exercise his own judgment as to the time and means proper to be employed in the collection and registration of facts—often of the very least importance when isolated, but, when arranged and brought to bear one upon another always developing the most important truths. Without this system of a careful generalization of accumulated facts involving time as well as study, no real advance can be made in scientific research. Anything short of this would be merely the work of amateurs—unsatisfactory, unreliable, and of no practical value. We have no knowledge of the actual condition of the work at the present time. We found our inferences of its favorable progress upon the well known practical and scientific reputation of the gentleman at its head, and his equally well known devotion to his favorite science, and untiring industry in everything which he undertakes. We have never met the gentleman, or exchanged a word with any member of the Commission; but we have understood from other sources more or less intimate relation with the Commission and fully competent to judge of its progress, that a valuable report is now in the hands of the State printer or on its way thither, through the Legislature which will give as full a detail of the labors of the Commission thus far, as the nature of the work will admit.

We understand that the English Government has decided to order an early geological survey of British Columbia. If our Legislators should be so penny wise and pound foolish as to discontinue our survey, we would suggest to the Government the propriety of availing themselves of the talent and experience which, we in our foolishness, may thrust aside. Indeed, we understand that correspondence to that end has already been unofficially inaugurated by our British neighbors.

It should be borne in mind that if this work is suspended at its present stage, its re-umption by another Commission would have to be pretty much *de novo*; very little aid would be derived from the unfinished labor thus far performed. And as the work *must*, in the nature of things be carried through at no very remote day, it would be well for our economising Legislators to bear in mind, that, under such circumstances the money thus far expended would result in very little if anything more than *nil*. If retrenchment must be resorted to we would suggest that numerous other, perhaps less important matters might be dispensed with. Perhaps the Commission, in its present stage, and under our existing condition of present taxation, might be somewhat curtailed in the number of assistants, etc.; but, for the credit of the State and the furtherance of its chief industrial interest, it says nothing of the advancement of science, we sincerely

trust this important undertaking will not be completely set aside. Better things are expected of California. Nature has made her an especial favorite by implanting within her capacious bosom treasures the most varied, rich and important; and with a profusion nowhere else to be found throughout her dominions. We shall be false to our interests, false to our destiny, and unworthy the reputation we have thus far fairly merited of being the most energetic and progressive community on the globe, if we take such an inglorious step backward.

## GENERAL MINING STOCK REPORT.

## REPORT OF SALES

At the San Francisco Mining Stock Board,  
For the week ending February 21, 1893.

Names of Companies.	Total No. Shares.	Shares per ft.	Par Value.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

SAN FRANCISCO, February 23th, 1893.

## STOCK REMARKS.

The Mining Market for the week just closed has continued to manifest the fair degree of activity noticed on the week previous. The disposition to operate in second and third class stocks also continues, and exhibits even an increased earnestness. The constantly increasing interest in, and attendance upon Mining Stock Sales, with the large amount of capital seeking investment in that direction, evinces a degree of confidence in mining operations, which cannot fail to exert a most healthful influence upon that great leading industry on the Pacific Coast. In the transactions of the past week first class stocks have been almost entirely ignored, Ophir has been scarcely touched—no sales appearing. We quote but a single transaction.

Gould & Curry has plenty of buyers but no sales—not a foot has changed hands this week.

Chollar remains firm at about last quotations. Very little stock in the market. We understand that \$600 is freely offered on the street without sellers, although the bids at the Stock Board for the week have varied from \$500 to \$570, closing at \$525.

Potosi has improved about \$30. Sacramento has advanced \$20. Both these stocks are in demand at quotations, with but little in the market.

Burning Moscow has been quite a favorite during the week. It has advanced from \$74 to \$110, and closes the week with an upward tendency.

Burnside has also become a sudden favorite in this market, advancing from \$22, on Monday to \$70 on Thursday. It continued fluctuating from that time till Saturday evening when it stood at \$50. The cause of this movement was a telegraphic dispatch announcing new and important developments at the mine.

Mount Davidson, which has for a long time stood at from \$4 to \$4½, has taken an upward movement and closed the week at \$6. Work upon this mine is being very energetically prosecuted, and still further advances may be confidently expected, at an early day.

ESMERALDA STOCKS still continue to claim a large share of attention. The Wide West has made a material advance, going up about \$40. One sale has been made the past week at \$400, half cash, balance in 60 days. Other quotations from this district remain at about last week's figures.

COSO MINES remain at about last week's quotations. Transactions light. MEXICAN MINES are but little dealt in. Mina Prieta is quoted at \$135, and Dios Padre at \$40. The former of these companies has a very superior class of machinery nearly completed at their mine. It will be running inside of two months.

The machinery for the Dios Padre, we believe, is now upon the ground and in process of erection. There are many other mines in the vicinity of the above which we presume will soon be heard of in this market.

MINING STOCKS AT AUCTION.—Jerome Rice & Co. sold the following Mining Stock at Auction on Wednesday last: 50 shares Bullion at \$2 13; 50 at \$2 50. 16 shares Sierra at \$22½. 22 shares Grass Valley at \$11; 25 at \$9. 20 feet Panama at \$1 12. 25 feet Hart Co. Devil's Gate District, at \$75. 151 feet La Forge Co. 37½c. 50 feet Centerville Co. at 20c. 80 shares Louise, at 15c. 25 feet St. Lawrence at 25c.

## TRANSACTIONS IN SHARES.

## NEVADA TERRITORY.

Ophir—12 at \$2700.  
Chollar—20 at \$570.  
Sierra Nevada—10 at \$77; 18 at 75; 20 at 75. 40 at from 75 (a 80).

Sinaloa	7 50	Pride of Washoe	15 00

## WASHOE STOCK REMARKS.

[Compiled from the DAILY TERRITORIAL ENTERPRISE.]

There has been a decided activity in stock to-day. Mining claims are in demand with an upward tendency, which have heretofore been unsaleable at any price. A discovery—supposed to be silver ore—has been made at Steamboat Springs. Five feet of Buchanan, sold to day, at \$70; 20 of Union at 13; 20 of Dunn at 7½; 10 of Sacramento at 55; 50 of Wellington reported sold at 20. The latter Company has been consolidated with the Eastern Slope Co., under the name of the Wellington Company. It is understood that immediate steps will be taken to incorporate.

TUESDAY EVENING, February 10th.

Allen is required for and saleable at from \$40 to 45; Sierra Nevada is in demand at 70. This stock generally finds its way to the San Francisco market. But little is held or offered here. Sacramento is in demand at \$55—none being offered. Utah is offered at 50 without sales. Several lots of Zouave are reported sold at 6 and 6½; there will probably be some demand hereafter for this stock, the Company having taken steps to resume operations on the claim, and also to incorporate. The Hazel Green Company are reported to have struck good rock in the face of their tunnel. The Banner Company are preparing to incorporate. A new discovery on American Flat is reported, supposed to be rich. Ten feet of Sierra Nevada sold at 70; 20 of Dunn at 7; 10 of Union at 12½; 25 Birdsall at 20; Texas is in demand at low rates.

WEDNESDAY EVENING, February 11th.

There has been considerable activity in stocks, to-day, and a large number of transfers have been made; but details are not given.

THURSDAY EVENING, February 12th.

Stocks, to-day, were less active than for several days previous, probably owing to the storm which raged throughout the day. Few sales were made and at figures below former rates. The Wellington and Eastern Slope Companies have consolidated their claims, and filed articles of incorporation under the name of Bullion Mining Company. Ten feet of this stock sold to-day at rates not desired to be made public.

There is some enquiry for Zouave; also for Oriental, at low rates. Texas is in demand at low rates: 95 feet sold at \$2. Ten feet of Pride of Washoe sold at 15; 5 feet of Sacramento for 55. Accounts from this mine are very favorable for the success of the Company. Hazel Green has demand at low figures; Birdsall is quiet at 20; Allen finds buyers at 45; Santa Fe is offered at 12½; Ural is attracting some notice, although no direct bids are made. Sinaloa is offered at 7½; ten feet of Dunn sold at 6½.

FRIDAY EVENING, February 13th.

The sky is again cloudless and the stock trade has shown unwonted animation to-day. Our brokers are largely supplied with San Francisco orders, many of which are being filled with considerable difficulty. Everything bespeaks extraordinary activity in stocks the coming spring and summer. Allen is advancing in favor rapidly, and is in demand at \$60; seller are scarce however at these figures. Sierra Nevada is also in request at San Francisco quotations. Bullion stock is enquired for at \$20 per share, but there is little in the market. Texas still in the market at low figures—\$2 @ 3. Fine looking ore is shown from the Pride of Washoe. This stock is still held at \$15 @ 20. Burnside is in market at \$25, and there is something of a disposition to deal in it at that price, but no sales are reported. Milton is offered in small lots at \$100, but a majority of the holders are awaiting higher bids. The sales reported to-day are, 15 feet of Allen at \$60; 10 feet Bullion at 21, 25 feet Oriental at 45; 10 feet Birdsall at 19½; 20 feet Zouave at 6½, and in large demand at that figure.

SATURDAY EVENING, February 14th.

The business of the week has been large, and shows a decided improvement upon the transactions of the last. Stocks to the amount, probably, of \$50,000 or \$75,000 have changed hands in this market during the past seven days, and the brokers are still largely supplied with unfilled orders.

The Texas Mining Company was incorporated to-day, under the Territorial laws, and there is some activity in the stock; 45 shares sold at from \$3 to \$5. There is still some inquiry for Zouave, at a slight advance on yesterday's quotations. No visible reason for this activity is discernable. The only sale reported is 20 feet at 7 50.

Yellow Jacket is held at \$225. Very fine ore is being taken from the disputed ledge. Allen is finding buyers at \$60. Bullion is in request at \$20, with little offering. The Oriental is meeting with purchasers at \$4 @ \$5 ten feet sold at \$5.

MONDAY EVENING, February 16.

The week opens with a lively demand for stocks, and a large number of transfers have been made to-day. Burnside has been the subject of some excitement, and the market for this stock, which opened at \$25 in the morning, reached 75 at 2 o'clock, then receded a shade, until 6. The cause of this sudden animation was the exhibition of some very fine ore from this claim. Some fine looking ore is being shown from a new location on American Flat. The rock was taken from a shallow shaft sunk upon a ledge toward which a number of tunnels have been directed for two or three years past. Zouave is in demand from \$9 @ 10, and little has been offered at these figures. The tendency of this stock is decidedly upward. San Francisco capital is seeking investment in it to something of an extent. Bullion had ready sale at \$25; Yellow Jacket at \$175 to 200; Texas at 9; La Cross at 18 @ 20. Ten feet Yellow Jacket sold, to-day at \$200; ten of Union at 15; 40 of Zouave at 8 @ 10; 100 feet (probably) Burnside at from 27½ @ 75; 15 La Cross at 20.

## ESMERALDA STOCK LIST.

From our Edition of Feb. 16th.

#### MINING EDUCATION.

In our last issue we referred to some of the disadvantages under which the California miners, as a class, labored by reason of the lack of a proper Mining Education. We also adverted to the fact that the popular antipathy against the application of science to mining, which was so prevalent among California miners, six or eight years since, has lately been pretty much laid aside. It is now very generally conceded that an empirical knowledge of mining is not the way to succeed in that difficult and uncertain branch of industry. The occurrences connected with the discovery and development of our silver and copper mines have produced such a change in public sentiment that, at the present day, it is rare to find a man who will openly avow, even if he secretly entertains, a belief in a necessary antagonism between theory and practice. Practice and science have now joined hands in the mines, and the time has passed when the former will venture "to go it blind" in the vain confidence of shallow empiricism, unaided by science.

The attainment of a passable mining education, when proper facilities and instructors are at hand, is not a work of so much time and study as many suppose. The difficulties and mysteries involved in becoming an expert in planning and working a mine, and in acquiring a practical knowledge of their geological and mineralogical characteristics, are no greater than are to be met with in many other subjects in the usual programme of practical and theoretic education. Experience is the foundation of success in all human undertakings; but the only value of experience is the facility which it affords us to deduce from previous results, a knowledge by which to overcome new or greater difficulties. This is identical with the inductive process of the man of science. But he that confines himself to his own limited experience, shuts his eyes against the lights of science; and, in despising the experience of others, he will soon find himself buried in the darkness of empiricism, while those who have entrusted him with their business will surely behold their undertakings enveloped in a labyrinth of difficulties, which must sooner or later result in common and promiscuous ruin.

A large mine is a complicated machine, and we might with quite as much propriety place a ploughman, with no mechanical experience, whatever, in charge of a double cylinder printing press, as to place a man, whose experience in mining is confined to what he has done himself, in charge of a mining operation of any magnitude. The art of mining involves a general knowledge of mechanics, surveying, mineralogy and geology. To understand working a mine—boring, sinking, pumping, winding, stoping, hauling and ventilation a tolerably correct knowledge of every leading principle in mechanics is needed. Without such knowledge the miner will find it impossible to decide upon the most economical means and arrangements for transport either in the mine or on the surface, the kind and capacity of engines needed, or the character and class of machinery best calculated to perform the work before him. Laying out the work properly, each part with reference to another, requires a knowledge of surveying. To ascertain the proper place to sink shafts, involving calculations of the dip and strike of strata, probability of water, faults, &c., implies a knowledge of geology: while by the aid of mineralogy only, can he determine the nature and value of the minerals upon which he is working, or which may chance to come in his way. On a correct conclusion with regard to each and all these points depends the success of the undertaking. The employment of experienced men with liberal salaries, to superintend works of this description may safely be predicted as uniformly resulting in larger dividends to stockholders, and increased safety to mine and workmen. Experience, coupled with a proper application of science, is the only foundation of fitness for the position of Mining Superintendent. The lack of these requisites has cost English adventurers millions of pounds sterling—sometimes in the faulty opening of a mine, at others in the lack of mineralogical knowledge for determining the value and character of the mineral when found. We gave several instances of the latter in our last issue, we might multiply instances of the former *ad infinitum*.

It is to the lack of this latter information that we must attribute the delay in the development of the silver and copper mines of the State, a full decade beyond the time when

their existence should have been known as the result of actual explorations.

There is but one way to remedy the evils here passed in review and provide our State with a competent corps of mining engineers and superintendents—*A School of Mines must be established* under the patronage and partial control of the State. An institution of this kind is absolutely necessary to a proper development of our resources. We need it as a collector and conservator of mining knowledge past and progressive. We need it as an institution for the general diffusion of information in this branch of industrial science. We need it as a place where the working miner, the proprietor and the engineer may be drilled and schooled in the art of mining, in all its bearings. Such schools have long been in existence in nearly every country in Europe, where they are fostered with the greatest care by the different governments. We shall endanger our reputation as a progressive people if we much longer delay a movement in this direction. The losses of property and misdirected outlay of capital already scored up, (to say nothing of the sad loss of life,) and laid at the door of inexperience, would have liberally endowed half a score of such schools.

Our State Geologist, in his address before the Legislature two years ago, advised the early establishment of such a school. We have now a Legislative Committee on Mining. Is there any more important matter which can come before them than that which we are now discussing? Have they ever thought seriously upon it? If so, or if not, heretofore, why would it not be well, at the present time, to prepare the general outlines of a plan for such an institution, and let it go before the people, with a legislative endorsement, for future consideration.

Legislators are quite too prone to think that when they have enacted laws for the creation and collection of revenue, for the collection of debts and the punishment of crime, and, perchance, performed the herculean task of electing a United States Senator, they have fully discharged their legislative duties. They forget that there are other equally, if not more important duties to perform, in providing the means for properly educating the adult industrial class of society. This is universally done in Europe, at least to an extent sufficient to provide competent directors for all the great industrial interests of the land. We have neither time nor space to say more under this head than what will be merely suggestive; but we hold that it is quite time our Legislators should take this matter under consideration, and initiate some steps toward an ultimate accomplishment of the end in view. The present "let alone" policy must inevitably continue to result in serious losses, both to individuals and the State, and we shall be fortunate indeed, if our chief industry is not thereby soon completely buried in the darkness of that empiricism in which it is already so sadly floundering.

From our Edition of Feb. 16th.

#### MINING INCORPORATIONS.

Notwithstanding the attempts at editorial pleasantry that are so frequently indulged in by our contemporaries, at the lengthening list of mining Companies, and the cumulative exhibits, of the many millions of capital which they represent, "on paper," each passing month brings additional evidence that this wealth is far from imaginary. The constantly increasing values of the figures which appear in our weekly stock reports, appended to the leading mines on the Eastern Slope, are stubborn facts, which must soon make plain to the most unbelieving that the footings of the aggregate "capital," placed as a value upon the mines now in progress of development, are not much too high. Imagination can scarcely form any adequate conception of the mineral wealth, which is soon to be developed on the Eastern Slope, and throughout the entire length and breadth of the "Great Basin," whose Western and Eastern rims are formed by the rocky slopes of the Sierra Nevada and Rocky Mountains.

Several of these earliest formed Companies, which, in the estimation of the great mass of people at that time, fixed their capital stock at an almost fabulous figure, have already reached the immediate vicinity of their incorporate value and their stock will no doubt, ere long, be quoted at a handsome percentage "above par." Indeed, one of them has already exceeded its par value and is quoted to day at more than 60 per cent. advance.

Numerous others, second and third class mines, are making such favorable developments, at the present time, as give good earnest of an early approximation of their stock to par value.

A few years since scarcely a merchant in San Francisco could be induced to invest a dollar in any mining enterprise. To do so was to lose *caste*, and endanger one's credit "on change." Even our foundrymen, could not be induced to invest a dollar, in a business to which they were then, as now, indebted for almost their entire business. Now things are entirely changed, and one can scarcely find a man in San Francisco who does not own "feet" in some mining claim.

What matter is it if a large portion of these projected, companies should fail? All, or even a majority cannot hope to succeed. A sufficient number, however, will prove so remunerative as to return a handsome aggregate percentage on all the money invested. Hitherto the chief burden and losses attendant upon opening up the mines of California, have fallen upon the mining community almost exclusively, while the commercial and agricultural interests have been greatly profited at no risk. It is one of the conditions of mining, everywhere, that many individual losses must occur, which, however, are always made good in the general aggregate of profits; and it is creditable to the mercantile interest of this city that it has now taken hold of the matter of developing the mines of the State and is freely pouring out its capital for that purpose. The aggregate of these investments cannot fail to be highly remunerative, and will reward the losers even, in the increased business which they will create and concentrate in San Francisco. This city owes its very existence to the mines, and it betrays a feeling of selfishness in any man of means, to refuse to do his part in developing the interest upon which its prosperity depends. Every new Mining Company, whose organization is announced, is evidence that a new mine has been discovered, and that somebody intends to spend a little money for its development. Every such item is a matter of encouragement, and indicative that the great interest of the State is progressing. We trust the day is far distant when we shall fail to find in each morning's paper the announcement that some new mining organization has been effected during the previous day.

#### SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

CAUTION.—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

## LOWER CALIFORNIA

## Colonization and Mining Company.

THE AGENTS SENT TO MEXICO BY the above Company having returned per steamer Oregon, after having secured a tract of upwards of

**125,000 Acres**  
OF RICH AGRICULTURAL LAND,  
and a valuable silver Mine,

The Company is now prepared to furnish exact information to Colonists who have already engaged, or those about to engage in this

## SPLENDID ENTERPRISE.

It proposes to send a vessel about the first of March next, and there being but a limited number of shares

NO TIME SHOULD BE LOST BY COLONISTS.

Farmers Miners and Mechanics,

With families are particularly invited by the authorities of the Territory. The land selected, in point of fertility of soil, is not excelled on the Continent. The climate is unsurpassed in the world. The richest silver mines known to exist in the Territory are in the immediate vicinity and bordering on the agricultural lands of the Colony.

N. B. Bear in mind that a share of \$25, at present, only \$200, which entitles the holder to free transportation for self, family, and articles of personal use and an equal share in the land, the Company's Silver Mine, etc. The whole enterprise, being for the mutual benefit of members only.

Full information can be had, and Mineral and Cotton specimens seen, by applying at the Office of the Company, North-west corner of Clay and Front Street.

## BOARD OF TRUSTEES.

Steam Engines and Boilers constantly on hand, and for sale cheap. Screw-Cutting and Turning Lathes for sale.

DEVOE & CO.

## Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mount Survey," and derives its name from the fact that the trustees of the University College have selected a site of about twenty acres in the center of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

For further particulars apply to

HARVEY S. BROWN,

No. 19 Naglee's Building.

Lithographic Maps can be seen and had at the above named office.

## READ THIS!

COAL OIL EXPLOSION.—ON SATURDAY EVENING, while Mr. Brewster was engaged in the Summer Street House in pouring coal oil from one can to another, his wife imprudently approached with a lighted candle and the oil exploded. Mrs. Brewster's arms were badly burned, as were also the husband's hands. However, he succeeded in mastering the flames, and preventing worse consequences.—[Evening Bulletin, Aug. 4.]

## To Mill Owners.

WANTED, by a person fully competent to the position, a situation as MINING SUPERINTENDENT in a Gold or Copper Mine. The Applicant was engaged for about eight years as Superintendent of Copper Mining Works in Cornwall, and has acted in the same capacity in Gold Mines in this State for the past seven years. He has had much experience, in Cornwall, as an Assayer, a Machinist, a Draughtsman, a Surveyor and an Assayer of Copper Ore. He can give ample testimonies as to his capacity for the position he seeks.

Apply at this Office.

## PHILADELPHIA BREWERY,

Second St, corner of Folsom, SAN FRANCISCO

## Hoelscher, &amp; Wieland Proprietors.

Thankful for past patronage to a discriminating public, we beg leave to apprise at the same moment our many friends and patrons that the above well known Brewery has been permanently located in our new premises, on Second street—the former residence of Capt. Folsom where we shall endeavor to continue in furnishing our numerous patrons with the best article of "Beer." We shall strive to perpetuate the good reputation for promptitude and the faithful execution of orders as heretofore, and thereby increase our custom.

W. T. & J. GARRATT,

City Brass and Bell Founders

Cor. First & Market sts., San Francisco.

BABBIT METAL CASTINGS, FIRE ENGINES, FORCE and Lift Pumps, Church and Steamboat Bells, Tavern and Hand Bells and Gongs, Hose and all other joints, Gauge cocks, Cylinder cocks, Oil Globes, Steam Whistles, HYDRAULIC PIPES and NOZZLES for MINING PURPOSES, Iron steam pipe furnished with fittings, &c.; COUPLING JOINTS of ALL SIZES. Manufacturers of "Garrett's Patent Improved Journal Metal."

F. G. BEPLER,

Practical Coppersmith

No. 115 (Old No. 22) Bush street,

Between Sansome and Battery, SAN FRANCISCO.

Whilst thankful for the former confidence bestowed upon me, I desire to say that I am ready to make and repair with cheapness and dispatch everything in my line of business; especially all kinds of apparatus used in Breweries and Distilleries; also, all such as are used where steam, spirits, or pumps of any kind be required. Also, Kitchen utensils for Hotels, Restaurants and private houses. Baking apparatus for Bakers and Confectioners, as well as all other kinds of copper work. All orders from the country promptly attended to.

## FREDERICK KESMODEL,

Cutler & Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,

SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupture, or any one interested, is called to his new method of fitting and adapting Trusses to the different cases. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as horse, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

FREDERICK KESMODEL,

Inventor and Patentee

## LABOR-SAVING

## Rock Drilling Machine,

TO ENGINEERS, RAILROAD CONTRACTORS, TURNPIKE and Quarrymen. The subscriber, Patentee and Agent for GARDNER'S PATENTS, will continue to receive orders for

HAND, HORSE, AND

STEAM-POWER MACHINES.

The Hand Machines are expressly adapted for working in Tunnels, Galleries, etc., one man performing the labor of three in the ordinary way.

A FOUR-HORSE POWER MACHINE, operated by one man, drives a machine capable of drilling a four to six inch diameter hole in granite four feet deep, and in hard limestone, six feet per hour—the rapidity of the work being limited only by the durability of the steel drill.

Satisfactory reference will be given as to the practical working of the machine, and its entire success in reducing the cost of drilling holes to one-tenth of the former expense, and on a rock excavation of any extent, from fifty to seventy-five per cent. on the entire work. Responsible parties who have rock excavations to make in any part of the State, the subscriber will undertake and guarantee to perform the work required, at a saving of at least twenty-five per cent. over any other process. Address orders to

WM. W. DUNN,

Fremont street, bet. Market and Mission, San Francisco.

## LATEST IMPROVEMENT

## in Ladies' Buckles.

MR. REICHEL RESPECTFULLY ANNOUNCES TO THE Ladies of this State, as well as to Jewelers and dealers in Jewelry, that he has made important improvements in BUCKLES, which surpass any and all heretofore made. Their simplicity, commodiousness, and beauty render them the most useful as well as ornamental trifles.

Orders from the country respectfully solicited. For particulars call at or address, FREDERICK REICHEL, Manufacturing Jeweler, 620 Merchant street, San Francisco.

## REMOVAL.

OFFICE OF THE PACIFIC METAL-urgical Office is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES—Highest market rates advanced in cash, for shipments. S. C. BRADSHAW, Agent, 318 California street, near Sansome, up stairs.

## WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 511 Market street,

Opposite Battery, San Francisco.

## FULTON FOUNDRY &amp; IRON WORKS

ALL kinds of Iron and Brass Castings furnished a short notice. Every style of finishing to iron when cast. Repairing to Machinery neatly done. Patern Making in its various forms.

D. B. Hinkley, Wm. E. Worth, Wm. A. Field

**Instruction in Assaying, Etc.**

A SCIENTIFIC AND PRACTICAL CHEMIST NOT HAVING the whole of his time occupied with his present business, is prepared to teach the various branches of Chemistry and Metallurgy, is willing to teach the method of assaying GOLD, SILVER and COPPER, alone, or to teach the regular systematic course of Qualitative or Quantitative Chemistry.

Address, T. P.  
Post Office, Box No. 167.

**WHEELER'S****Amalgamating and Separating Pans.**

It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the trituration this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals over its competitors, as well as a still larger percentage in the amount of work performed.

\* These Pans can be seen in daily operation, at the Miner's Foundry, on First street in this city, where all interested are invited to call and examine for themselves.

### To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

### Coal Product of the United States for 1860.

Statistics of Coal in the United States during the year ending June 1, 1860, taken from the preliminary report on the eighth census, and revised and corrected for the U. S. Mining and Railroad Register:—

States.	Bituminous.		Anthracite.	
	Bushels.	Value.	Tons.	Value.
Rhode Island	95,000	28,500	1,000	5,000
Pennsylvania	70,334,729	2,978,449	9,415,332	11,869,574
Maryland	14,200,000	464,338		
Ohio	31,639,375	1,653,558		
Indiana	1,643,800	113,568		
Illinois	14,906,643	1,019,751		
Iowa	86,500	6,640		
Missouri	97,000	8,200		
Kentucky	6,732,000	476,800		
Virginia	11,228,675	725,678		
Georgia	48,000	4,800		
Alabama	10,000	1,500		
Tennessee	3,474,100	413,662		
Wash. Ter.	134,350	32,244		
	154,631,172	\$7,927,388	9,416,332	\$11,874,574
Anthracite—tons		9,416,335		\$11,874,574
Bituminous—tons		6,185,246		7,927,388
Aggregate tons		15,601,578		\$19,801,962
Value of coal mined in 1850				7,173,730
Increase, (176 per cent.)				\$12,628,212

In view of the immense amount of Anthracite Coal now annually consumed, the product of the mines of the United States, it is difficult to realize that its utility as an article of fuel was comparatively of so recent discovery. Prior to about 1822, it was known only in Pennsylvania as an incumbrance to the ground, a "black rock," not even fit for building purposes. Governor Findlay is said to have discovered its inflammability by accident, having heaped some of

the "stones" on his fire to ascertain whether they contained any metallic substance. But a great many experiments were tried before it became useful as a colorific agent. An old Quaker is said to have been the first one who originated the plan of burning it in open grates.

The product of Anthracite coals is confined almost exclusively to Pennsylvania. The coals of England are bituminous, and were used for fuel to a limited extent by the Danes and Saxons, many centuries ago. As long ago as 1306, the use of coal was prohibited in London under the supposition that it was dangerous to health, and, indeed, as far back as 1281, coal was an article of trade at Newcastle, Eng.

**COPPER IN NEVADA COUNTY.**—The Zinc House Copper Mines, on the Auburn Road, about which the Nevada Co. papers have had much to say, lately, appear to be progressing finely. From a private letter received yesterday, we are permitted to make the following extracts:

"The Pennsylvania Co. have struck their ledge at 27 feet and the assay of their ore at that depth was 18½ per cent.—every body elated and no one offering to sell. The first North Extension—"The Exchange Co.," are preparing to get to work, in earnest, as the ledge has been struck both sides of them, making it a 'sure thing' that the lead runs through their ground."

A late number of the Grass Valley *National*, speaking of copper ores in that vicinity says:—"Copper miners who have worked in Europe, in Michigan and in other copper fields, assure us that they know of copper veins in the vicinity of Grass Valley, as also in proximity to Nevada, many of which will pay at least thirty per cent. The ore can be extracted at a light expense." The *National* further adds: "The copper mines of this section have one great advantage over those of Lake Superior in this: At the latter place large masses of native copper, frequently weighing one hundred tons, are found, and the expense of extracting them is generally greater than the amount realized for the sale of copper. These immense blocks are chiseled out at an expense of \$10 per foot, the work of course being done by hand. In all the copper ledges yet discovered in Nevada county, as we are informed by prospectors, the native copper found is in small particles, and of course is easily extracted. As the work of descending on copper lodes progresses, and great depths are attained, immense masses of native copper, like those found in the Michigan mines, may be found; but by that period the price of labor will doubtless become reduced, and copper miners can afford to extract metal which at present, labor and transportation rates being high, would prove anything but remunerative."

THE inventor of rebel torpedoes for blowing up vessels is a Massachusetts Yankee by the name of Ivins. He also built their ram Arkansas, the only craft that has troubled us on the Western waters. Sometimes they talk of forming a confederacy and leaving out New England; but even in their deviltry they have to look to Yankee genius. To leave New England out would be like a man's knocking off the top of his head to improve his intellect.

### TREATMENT OF SILVER ORES.

We commence, with the present issue, the republication, from the London *Mining and Smelting Magazine*, of a very interesting treatise on the Mexican method of amalgamating silver ores. This treatise is from the pen of a distinguished scientific man, who has a thorough practical as well as theoretic acquaintance with the subject upon which he writes. It will be continued through some five or six numbers of the Press, and will be found of much value to those of our readers engaged in mining for silver. Those who do not file the paper regularly, should at least preserve the numbers containing these articles. They will be found valuable both for reference and study.

We have examined some very rich specimens of copper ore, at the office of Thos. Ogg Shaw, 422 Montgomery St. They were taken from the Keystone, Kentucky, Union and Webster ledges, Copperopolis. Mr. Shaw has just returned from the Copperopolis region, where he has been engaged in Superintending the putting up Mrs. Hall's Smelting Furnace and Condenser.

SOME of the richest copper ore in the city may be seen at the office of the Miners' Foundry, on First St. It is from a mine recently opened near Lorello, Lower California, under the direction of R. McKee, Esq. We are promised some further facts with regard to this and other mines in that vicinity, which we shall place before our readers as soon as received.

**MAP OF THE HUMBOLDT MINES.**—We understand that a map of the Humboldt River Mines has recently been published in this city. Such a map, if full and correct, must be a valuable addition to our mining geography, at this time. We have not yet seen a copy.

**THE GEOLOGICAL SURVEY.**—The Sacramento correspondent of the *Herald* of Feb. 17th, says:—"The expenditures of the geological survey up to the present time has been \$46,749 77. As the total amount appropriated for the Survey is fifty thousand dollars (\$50,000,) it follows that only about three thousand and two hundred and fifty dollars (\$3,250) remains available for prosecuting the work during the next six months; and that unless some special provision is made by the Legislature it will be stopped entirely in February or March."

**DISCOVERY OF A LEAD AND SILVER MINE IN NEVADA COUNTY.**—A mine containing lead and silver in large quantities, has recently been discovered in Washington township, about twenty miles above Nevada. A piece of the ore assayed by Mr. Ott, yielded 77 per cent. of lead, and silver at the rate of 140 ounces to the ton. The ledge is said to be 14 feet in thickness, and to appearances the ore is of uniform thickness. [*Nevada Democrat*.]

**A WIDE LEDGE.**—The Bacon Ledge, at Gold Hill, N. T., now owned by Fairfax, Doake & Co., has proved itself, by recent explorations, to be eighty feet wide.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Texas Co., at a Meeting held Feb. 14, levied an assessment of one dollar per share, payable to the Secretary in Virginia City.

Santa Rosa Co.—February assessment of 20 cents per share now due and payable.

Madison Co.—An assessment, two dollars per share, was levied Feb. 17, payable immediately, at Office, 600 Merchant St.

Union Co.—An assessment of one dollar per share was levied February 16, payable on or before March 25.

Pena Co.—An assessment of \$3 per share was levied Feb. 5, one half payable March 1, balance April 15.

Kosuth Co., Devil's Gate District.—An assessment of 10 cts. per share was levied Feb. 7.

Constitution Company levied an assessment of 25 cts. per Feb. 11, payable immediately.

La Plata Oro Co. levied an assessment of five dollars per share, Feb. 9, payable at Office of the Secretary in Virginia City.

La Plata Co. levied an assessment of 50 cts. per share Feb. 2nd, payable at Office of the President.

Alamo Co. levied an assessment of 50 cts. per share, Feb. 11, payable on or before March 20, at 115 Cal. Street San Francisco, or at office in Carson City.

Tucker Co. levied an assessment of 25 cts. per share, Feb. 11, payable immediately at 608 Merchant St.

Hawley Co. levied an assessment of one dollar per share, on Feb. 9, payable on or before March 12, to Superintendent at the mine, or Secretary at Office.

Slate Range Co. levied an assessment of 50 cts. per share, Feb. 4, payable, March 15.

Assessments upon Mining Stock have been levied as follows:—

Caledonia G. & S. M. Co. levied an assessment, Feb. 1, of 50 cents per share, payable immediately. Sale of delinquent stock will be made March 7th.

Moss G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable at 428, Montgomery St., or to the Superintendent at the mine.

White Cloud G. & S. M. Co. levied an assessment of 75 cents per share, Jan. 27, payable to the Secretary, at 28, Montgomery St.

Warren G. & S. Mining Co.—An assessment of 75 cts. a share was levied Jan. 26, payable to the Supt., at Virginia City, or to the Sec., 428, Montgomery St.

Warren G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable to the Sec. in this city or to the Supt. at the mine.

El Dorado G. & S. M. Co.—An assessment of One Dollar per share was levied Jan. 23, payable to the Sec. or to the Supt.

Gaudaloue S. M. Co.—An assessment of \$30 per share was levied, payable on or before March 1st.

El Tesora Mining Co.—An assessment of \$1½ was levied Jan. 27, payable at office on or before Feb. 27.

Polar Star G. & S. M. Co. levied an assessment of 50 cents per share, February 4th, payable on or before the 4th of March, at the Office in this city or to the Superintendent at the mine in Aurora, (Esmeralda.)

Dios Padre G. & S. M. Co. levied an assessment of 3 dollars per share, Jan. 31, payable in 30 days, also an assessment of 2 dollars per share, payable in 60 days, at office 502 Montgomery street.

Beckwith G. & S. Mining Co.—An assessment of 25 cents per share was levied Jan. 24, payable immediately.

Sonora Mining Co.—An assessment of 25 cents per share was levied Jan. 23, payable immediately.

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Caney Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Airatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norcross—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skae, at the Mine, on or before Feb. 25.

Sierra S. M. Co. An Assessment of \$2½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount Davidson Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and U St., Virginia City.

Baltimore American Consolidated.—An assessment of 50 cents per share was levied, Jan. 3.

Savage.—An assessment of \$35 cents per share was levied, Jan. 7.

Hawley.—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cts. per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

Mina Prieta S. M. Co.—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

### COMPANY MEETINGS.

The Cochecho Co. will hold a meeting at No. 606 Montgomery St., on Monday, March 2nd, for the purpose of revising By-Laws, etc.

Chs. Caney Co.—Special meeting of stockholders will be held on Wednesday, March 18, to consider the propriety of an increase of capital stock.

South Utah Co. will hold its annual meeting for election of Trustees, etc., at No. 608 Merchant St., March 20.

Nevada Co. will hold its annual meeting for electing Trustees, etc., at 608 Merchant St., March 20.

Potosi Co.—Annual meeting will be held at Office, in this city, March 3d.

Annie Laurie Co. will hold its annual meeting for election of Trustees, etc., March 19.

Santa Rosa will hold its annual meeting, March 5, at Tucker's Hall.

Desert Co. will hold its annual meeting, March 4.

Daney Co. will hold its annual meeting, March 2.

### ASSESSMENT SALES.

Texas Co. will sell delinquent shares, on the 14 of March.

Meredith Co. will sell delinquent stock, March 2n.

Coso Co. will sell delinquent stock, March 18.

Moray Co. (V. City.—Suits for delinquent assessments will be commenced, March 14.

Michigan Co. (Gold Hill) will commence suits for delinquent assessments, March 16.

Sales of Stock for non-payment of assessments are advertised to be sold as follows:—

North Potosi Mining Co.—Sales delinquent stock will be made March 17.

Peytona G. & S. Mining Co.—Sales of delinquent stock will be made March 1st.

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

## GENERAL NOTICES.

Jenny Lind (Esmeralda).—Owners of ground in this Co. are requested to call and sign deed of trust at 608 Merchant St.

Mount Hope Co.—Persons claiming stock are requested to present title papers for examination till March 16.

U. S. Mining Co.—All persons claiming stock are requested to present title papers for examination at Nos. 7 & 8 Government House.

Caution.—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

Ashland Co.—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

Coso Silver Mining Co.—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

Henry Martin G. & S. M. Co.—"Thomas Wallace, Trustee," gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

THE SWEENEY CO., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

THE CHIMNEY ROCK CO., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

### ESMERALDA MINING NOTICES.

THE ZENOBIA LODGE COMPANY, give notice that they claim a superior title to the Johnson Co. claiming the same ground, so far as said localities conflict. This ground is a portion of that now held by the Company known as the Wide West Company. The notice is signed by A. Waddell, J. C. Dorsey, S. P. Dorsey and James Elder,

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1863. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 50 Names can be sent in at different times and from different Post-offices Specimen copies will be sent gratis to any part of the country.

### EWER & SMITH, Publishers,

Room 27, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Texas Co., at a Meeting held Feb. 14, levied an assessment of one dollar per share, payable to the Secretary in Virginia City.

Santa Rosa Co.—February assessment of 20 cents per share now due and payable.

Madison Co.—An assessment, two dollars per share, was levied Feb. 17, payable immediately, at Office, 600 Merchant St.

Union Co.—An assessment of one dollar per share was levied February 16, payable on or before March 25.

Pena Co.—An assessment of \$3 per share was levied Feb. 5, one half payable March 1, balance April 15.

Kossuth Co., Devil's Gate District.—An assessment of 10 cts. per share was levied Feb. 7.

Constitution Company levied an assessment of 25 cts. per Feb. 11, payable immediately.

La Plata Oro Co. levied an assessment of five dollars per share, Feb. 9, payable at Office of the Secretary in Virginia City.

La Plata Co. levied an assessment of 50 cts. per share Feb. 2nd, payable at Office of the President.

Alamo Co. levied an assessment of 50 cts. per share, Feb. 11, payable on or before March 20, at 115 Cal. Street San Francisco, or at office in Carson City.

Tucker Co. levied an assessment of 25 cts. per share, Feb. 11, payable immediately at 608 Merchant St.

Hawley Co. levied an assessment of one dollar per share, on Feb. 9, payable on or before March 12, to Superintendent at the mine, or Secretary at Office.

Slate Range Co. levied an assessment of 50 cts. per share, Feb. 4, payable, March 15.

Assessments upon Mining Stock have been levied as follows:—

Caledonia G. & S. M. Co. levied an assessment, Feb. 1, of 50 cents per share, payable immediately. Sale of delinquent stock will be made March 7th.

Moss G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable at 428, Montgomery St., or to the Superintendent at the mine.

White Cloud G. & S. M. Co. levied an assessment of 75 cents per share, Jan. 27, payable to the Secretary, at 428, Montgomery St.

Warren G. & S. Mining Co.—An assessment of 75 cts. a share was levied Jan. 26, payable to the Supt., at Virginia City, or to the Sec., 428, Montgomery St.

Warren G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable to the Sec. in this city or to the Supt. at the mine.

El Dorado G. & S. M. Co.—An assessment of One Dollar per share was levied Jan. 23, payable to the Sec. or to the Supt.

Gaudaloupe S. M. Co.—An assessment of \$30 per share was levied, payable on or before March 1st.

El Tesora Mining Co.—An assessment of \$1½ was levied Jan. 27, payable at office on or before Feb. 27.

Polar Star G. & S. M. Co. levied an assessment of 50 cents per share, February 4th, payable on or before the 4th of March, at the Office in this city or to the Superintendent at the mine in Aurora, (Esmeralda.)

Dios Padre G. & S. M. Co. levied an assessment of 3 dollars per share, Jan. 31, payable in 30 days, also an assessment of 2 dollars per share, payable in 60 days, at office 502 Montgomery street.

Beckwith G. & S. Mining Co.—An assessment of 25 cents per share was levied Jan. 24, payable immediately.

Sonora Mining Co.—An assessment of 25 cents per share was levied Jan. 23, payable immediately.

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Caney Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Adriatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norcross—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skae, at the Mine, on or before Feb. 25.

Sierra S. M. Co. An Assessment of \$2½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount Davidson Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sattou Avenue and C St., Virginia City.

Baltimore America Consolidated.—An assessment of 50 cents per share was levied, Jan. 5.

Savage.—An assessment of \$35 cents pershare was levied, Jan. 7.

Hawley.—An assessment of 25 cts. per share was levied Jan. 5, payable in 30 days.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

RED, WHITE AND BLUE G. & S. M. Co. levied an assessment of 25 cts per share, payable on or before Feb. 1st, office cor. Pine and Montgomery Sts.

Mina Prieta S. M. Co.—An assessment of \$10 per share was levied, Dec. 26, 1862—payable at office, cor. Montgomery and Jackson Sts., on or before Jan. 26, 1863.

### COMPANY MEETINGS.

The Cocheco Co. will hold a meeting at No. 606 Montgomery St., on Monday, March 2nd, for the purpose of revising By-Laws, etc.

Chs. Caney Co.—Special meeting of stockholders will be held on Wednesday, March 18, to consider the propriety of an increase of capital stock.

South Utah Co. will hold its annual meeting for election of Trustees, etc., at No. 608 Merchant St., March 20.

Nevada Co. will hold its annual meeting for electing Trustees, etc., at 608 Merchant St., March 20.

Potosi Co.—Annual meeting will be held at Office, in this city, March 3d.

Annie Laurie Co. will hold its annual meeting for election of Trustees, etc., March 19.

Santa Rosa will hold its annual meeting, March 5, at Tucker's Hall.

Desert Co. will hold its annual meeting, March 4.

Daney Co. will hold its annual meeting, March 2.

### ASSESSMENT SALES.

Texas Co. will sell delinquent shares, on the 14 of March.

Meredith Co. will sell delinquent stock, March 2n.

Coso Co. will sell delinquent stock, March 18.

Moray Co. (V. City.—Suits for delinquent assessments will be commenced, March 14.

Michigan Co. (Gold Hill) will commence suits for delinquent assessments, March 16.

Sales of Stock for non-payment of assessments are advertised to be sold as follows:—

North Potosi Mining Co.—Sales delinquent stock will be made March 17.

Peytona G. & S. Mining Co.—Sales of delinquent stock will be made March 1st.

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

## GENERAL NOTICES.

Jenny Lind (Esmeralda).—Owners of ground in this Co. are requested to call and sign deed of trust at 608 Merchant St.

Mount Hope Co.—Persons claiming stock are requested to present title papers for examination till March 16.

U. S. Mining Co.—All persons claiming stock are requested to present title papers for examination at Nos. 7 & 8 Government House.

## TO COPPER MINERS AND COPPER PROSPECTORS.

We hear much said, at the present time, among copper miners and prospectors for copper, with regard to "indications" of this mineral. As a general rule our copper miners consider that "gossan" is an infallible indication, and it is furthermore stated that this "gossan" is found in great abundance. The following article, treating upon the Gossan of the Cornwall mines, which, we extract from an English scientific periodical may, perhaps, be of value to some of our California copper miners:—

"This gossan, of which I have examined a great number of samples, from the 'Silver Vein Mine' at Lostwithel, differs notably in colour and general appearance as we pass from one sample to another. Most specimens, however, give a yellowish brown powder, sometimes inclining to red or white. Like all gossans, that from the above named mine, is composed of quartz and oxide of iron, but it is remarkable by the fact that it always contains a certain proportion of silver. Its density varies from 2.66 to 2.75, and its general composition oscillates between the two extreme results I and II.

	I	II
Quartz.....	10	85
Water and Crenate of Ammonia.....	10	3
Oxide of Iron &c.....	80	12
	100	100

The quantity of quartz varies, then, in this gossan from 10 to 85 per cent; but it passes here and there into compact quartz, &c.

I have found that the silver contained in this rock exists in the state of sulphide of silver, combined with sulphide of antimony, copper and iron. The mineral which contains it is fahlerz, or grey copper, and it is dispersed generally throughout the gossan, being often invisible to the naked eye. But in some specimens where the quartz is compact the grey copper shows itself in veins and plates, and where this is the case the quantity of silver is considerable. Regarding the percentage of metallic silver, I chose the following from a considerable number of assays executed in my laboratory during the present year.

I.	II.	III.	IV.
Brown Gossan. 0.038 per ct.	Black Gossan. 0.010 per ct.	Red Gossan. 0.015 per ct.	Yellow Gossan. 0.065 per ct.
V.	VI.	VII.	VIII.
Yellow Gossan. 0.065 per ct.	Yellow Gossan. 0.040 per ct.	Dark Red Gossan. 0.035 per ct.	Yellow Gossan. 0.040 per ct.
IX.	X.	XI.	
Damp Gossan. 0.028 per ct.	Yellowish Brown Gossan. 0.040 per ct.	Wet Gossan. 0.020 per ct.	
XII.			
Compact Quartz, with Grey Copper. 0.185 per ct. also 27½ per cent of Copper.			

These analyses show that most frequently the Cornish gossan gives 0.04 per cent. of metallic silver, or 4 pounds of silver for every 10,000 lbs. of gossan, which is about 14½ oz of silver to every ton of gossan, and that where it passes into compact quartz, showing veins of grey copper, there is a great increase in the proportion of silver and a considerable proportion of copper."

If the gossans of California contain silver, even in small proportions as the above, it would be well for the miners to have all such mineral deposited by itself, as some day it may be worked for silver, to a great profit. If not in our days, perhaps it may in those of our grand children. Consequently, since the saving of it will cost us nothing, and as a probability exists that we may want it ourselves, it is our duty to act with economy.

**TREASURE SHIPMENTS ON THE 21ST ULT.**—The shipment of treasure on the 21st ult was as follows:—

To England.....	\$946,857 38
To New York.....	242,837 66
To other ports.....	43,000 00—\$1,232,745 04
Previously this year.....	8,050,146 64

Total since Jan. 1, 1863.....	\$9,282,891 68
Corresponding period of 1862.....	5,947,088 73

Excess this year.....\$3,335,802 95

**HEAVY MINING TRANSACTION.**—H. F. Wood has disposed of his interest—one-half—in the Independence Quartz Mining Company, at Sierra Buttes, to E. Said, for \$60,000

## THE "KEITH DESULPHURISING PROCESS."

A new process for working gold-bearing rock has recently been introduced into the Pike's Peak quartz mines, which is described as follows in a late number of the *Denver News*:—

We have delayed speaking at length of the new gold saving process, until able to give a definite result. It seems that the first report of its operation was greatly exaggerated in amount, though not much in proportion—though we have talked with those who said they had handled the gold, and voluntarily vouched for the truth of the report as we published it.

The first experiment, as we since learn, was upon one-third of a ton of ore—iron pyrites—from the Gregory lead, which has been paying, by the common process of milling, about one hundred dollars to the ton. The new apparatus was six hours in working it, and obtained one hundred and sixty-seven dollars and fifty cents to the ton. At the conclusion of the experiment it was found necessary to obtain greater power, and operations were stopped to set up a larger steam engine, which will very soon be ready for work.

The *modus operandi*, as explained to us, is as follows:—The ore, as it comes from the mine, is first passed through a "stone-breaker," identical with, or very similar to, the machines used in the States for breaking stone to macadamize roads or streets, which reduces it to pieces about the size of hulled walnuts. It next goes, dry, through a mill similar to the patented quartz crushers known as the "Young America," consisting of a hollow iron cylinder, not unlike, in appearance, a great grindstone, and of great strength, the inside surface of which is corrugated like the grinding surface of a coffee mill or iron corn mill. Passing through the centre of this cylinder is a shaft, to which are attached arms which revolve just clear of the corrugated surface above described. This shaft is made to revolve at a rate of fifteen hundred revolutions a minute. The ore is introduced through a funnel like opening in the side, taken up by the arms of the revolving shaft, and hurled against the rough surface of the cylinder, until reduced to an impalpable powder, when by the draft of the revolving arms it is driven out through a long pipe, into which a flame of intense heat is introduced. In passing through this flame it is desulphurized; the sulphur, arsenic, and other kindred substances which prevent amalgamation, are completely destroyed, and the crushed ore escapes from the furnace ready for amalgamation with quicksilver. To effect this, it is conveyed to a large arasta, which is lined with galvanized plates. Here it first comes in contact with water, and the great revolving wheels stir it until every particle of gold is brought in contact with quicksilver, and is deposited in the form of amalgam. A stream of clear water is then introduced, and all the refuse or tailings is carried off.

Such is the theory and principle of the new plan. It remains yet to be seen whether the first is perfect in practice, and the latter beyond improvement. But even with the present result, it seems destined to work a revolution in gold mining. It has long been the belief of our best miners that our mills had, under the most favorable circumstances, succeeded in saving only from ten to twenty per cent. of the gold contained in the gold handled; an opinion which seems to have been already confirmed by this singular experiment, in which the yield increased more than five fold. We wait anxiously for further tests, and are assured that the next trial will give a still more favorable result.

This "process" is also referred to in a letter from the well known "Dan de Quille," late mining reporter of the *Territorial Enterprise*, which will be found in another column of this paper. It appears that much is expected from it, by the miners about Denver City.

The principle is not a new one. It was employed several years ago at the Llanelly Works, near Swansea, England, to separate sulphur, arsenic and other volatile ingredients from copper ores. After a thorough trial, it was found impracticable, and abandoned. No advantage was gained by this process over the usual reverberatory furnace, either in economy or completeness of desulphurization. So far as we can learn, the "Keith Process," presents no advantages over that employed at Swansea. If flames of such "intense heat," as described in the *News*, are introduced, can they be so regulated as to prevent the melting of the sulphurets, before getting rid of the volatile ingredients which interfere with amalgamation? The *Denver paper* promises to give, in a future number, further results with regard to the working of this process, which, when received, we shall transfer to our columns.

**A PROFITABLE RAILROAD.**—It is said that the net earnings of the Panama railroad, for 1862, have been equal to 30 per cent. on the entire investment.

## MINES AND MINERAL INDICATIONS ALONG THE OVERLAND ROUTE.

"Dan de Quille," who recently left Virginia City, by the Overland Route, for the East, is writing to the *Territorial Enterprise* "Notes of his Trip Across the Continent." The following extracts from his last published letter contain matter of some importance to California miners:—

I am stopping at the Planter's House, the principal hotel of Denver. There must be over a hundred regular boarders at this house and there is a constant stream of transient custom pouring in from the States and the mines. Here we have the same style of dress and the same faces that we meet with in the mining towns of California and Washoe, and those about us talk of ores and mills. A Californian or Washoeite is quite at home here.

## THE BEAVER HEAD MINES.

There will be many persons go from here next month to the Beaver Head mines. All who have been there speak well of the mines, and all are going back. A friend from Salt Lake City, representing a Gentle company of that city and \$30,000, arrived here a day or two since for the purpose of purchasing a mill for the Beaver Head mines. The mill is for one of the veins of quartz I mentioned in my letters from Salt Lake. The gentleman has brought most of his teams and will go up to the mines in a day or two to buy the mill. His company already have agents at work in the Beaver Head country, looking out to secure good leads. Some ten of the heaviest Salt Lake merchants and capitalists are enlisted in this enterprise. They have more exact information in regard to the mineral wealth of the northern country than any parties here or elsewhere, and know just what they are doing.

## MINERAL INDICATIONS ON THE ROUTE.

In regard to mineral indications between here and Salt Lake, I may briefly say that after leaving the Mormon metropolis the first quartz country observed by me was that bordering on Silver Creek. This is a belt of mineral country of forty or fifty miles in width, and I think good veins of silver ores might be found within it. After crossing the Weber we have nothing but sedimentary rocks till reaching the Black Hills. The Rocky mountains, where we crossed them, are purely sedimentary—no sign of any other rocks, or of precious metals. Coal, however, is found in many places, and if looked for, could doubtless be found in nearly every place between Echo canon and the Black Hills. In the Black Hills I saw several veins of quartz, but as night overtook us soon after getting into the range I had but little opportunity for examining the country. I have visited the best mines in the vicinity of Central City, Black Hawk, Nevada City, Eureka and Mountain City; also a number of mills in these places. I secured specimens from many veins which I will test on reaching the States, and mention more particularly in some future letter. I may say, however, that I found a great amount of ore almost precisely similar in appearance to the argentiferous ores of the Humboldt, Reese river, and Galena, (Pleasant Valley or Steamboat) mines. Some of these contain a very considerable amount of silver.

## THE KEITH PROCESS.

I saw, while in the mines, a new process. It is quite interesting and I will send you a full description soon after getting home. I think both the crushing and desulphurizing apparatus will be a good thing in Washoe.

This "process" is fully described in another column of the *Press*.

**ORE TESTS.**—Several inquiries have been made to us of the different chemical tests that will discover traces of silver and copper in the rock. If our friends who are conversant with this matter will forward information respecting such chemical tests to us, we will be happy to give them publicity. [*Amador Ledger*].

Persons interested in the above will find the desired information, and much more in the same connection, all valuable to copper and silver prospectors, in late numbers of this paper. A remittance of six months or a years subscription to the *MINING AND SCIENTIFIC PRESS*, will afford them all the valuable information obtainable from books in relation to prospecting for either silver or copper, and assaying and testing ores of the same. The dissemination of that class of information is the speciality to which this paper is devoted, and no mineral prospector in the silver and copper regions of California can invest \$4 to better advantage than by sending the same to this office and becoming a subscriber and reader of the *PRESS*. We shall be extremely happy to receive the names of all who may favor us with cash patronage. We also pledge ourselves at the expiration of the year to refund to any party double the amount of his subscription, who may honestly think he has not got the worth of his money in valuable information from our columns.

## STOCK REMARKS.

SAN FRANCISCO, March 2nd 1883.

The activity in stocks still continues, and another week has closed with generally advanced rates. We quote a much wider range of stocks to-day, than on any previous occasion. It will be noticed by our Virginia City report, that San Francisco capital is not altogether confined to "home transactions," but also nets a conspicuous part in transmontane stock operations. The Territorial Enterprise says if San Francisco capital does not regulate the price of Virginia City stocks, it, to a great measure, creates a demand for them there.

Ophir has advanced \$100 during the week and has been considerably dealt in. \$3000 is offered on 60 days, without sellers. \$3000 cash would probably bring them out.

Gould & Curry have declared a dividend, for February, of \$100 per foot, carrying over a surplus of \$1000 to March. The stock appears to be quiet—one sale, only, being quoted this week. This Company's mill is now running 40 stamps, and turning out, according to the Virginia "Union," a ton and a-half of amalgam, daily! A year's dividend for a single foot of this Company was recently sold for \$960. The Company now have on hand \$70,000.

Mount Davidson still continues to be actively dealt in at advanced rates. The mine is now under the management of Dr. James Delevan, an experienced miner. The Tunnel is now in about 900 feet; 491 feet from the entrance a side drift is run for the Florentine vein; 118 feet further on is another for the supposed Gould & Curry vein, while still another 131 feet beyond, is running for the Octavia vein. The work is progressing day and night. Important developments are confidently expected at an early day.

Burning Moscow still continues active notwithstanding the failure of the jury to agree, in its suit with the Matterson. The announcement caused a decline of about 20 per cent. in its stock, at which rates buyers were plenty.

Sacramento, Charles Caney, and Norton have slightly declined. The Savage, Chollar, Hale & Norcross, and Potosi, are favorites among the 2nd and 3d class stocks.

ESMERALDA.—A very large business still continues to be done in Esmeralda stocks. These stocks are almost universally improving in this market. A large number of new companies have recently been incorporated to work mines now opening in that district.

One sixteenth share in the Sierra Batos Quartz company changed hands last week for \$20,000. This mine will pay steadily 4 per cent. a month on \$300,000.

One half of the Independence Q. M. Co. changed hands a few since for \$60,000.

## TRANSACTIONS IN SHARES, FOR THE WEEK.

## NEVADA TERRITORY.

Ophir—12 at \$2,840; 12 at 2,850; 60 at 2,900, 30 ds; 18 at 2,800; 60 at 2,975, 20 ds.

Gould and Curry—20 at 3,350.

Chollar—105 at \$550 @ \$610.

Sierra Nevada—102 at \$70 @ \$75.

Burning Moscow—10 at \$105; 10 at 110, 30 ds.; 40 at 110, 30 ds; 20 at 75, 20 at 100; 40 at 100; 80 at 95; 20 at 92½; 20 at 102½, 30 ds.; 35 at 110 30 ds.

Potosi—145 at \$155 @ \$155.

North Potosi—5 at \$40; 50 at 31; 10 at 30; 20 at 43.

Sacramento—21 at \$70; 80 at 60 @ \$72.

Chu's Caney—10 at \$55; 5 at 52½; 10 at 52½.

Savage—5 at \$1,400.

Rogers, F. D.—27 at 12 assessments unpaid.

Yellow Jacket—2 at \$250.

Iowa—10 at \$110.

Norton—5 at \$22; 15 at 35; 30 at 35; 10 at 34; 40 at 30

Cedar Hill Tunnel Co.—51 at \$5.

Mount Davidson—73 at \$7; 12 at 5½; 25 at 5; 50 at 6.

45; 25 at 43; 30 at 45; 10 at 44; 10 at 42; 30 at 43; 30 at

43; 20 at 42½; 10 at 44; 20 at 40. 30 at 40.

Hale & Norcross—60 at \$700 @ \$750.

Madison—30 at \$30; 10 at 40; 20 at 35; 12 at 35.

Nevada—5 at \$115; 10 at 115.

Recorder—20 at \$22½; 20 at 20; 30 at 22½; 20 at 20.

Zouave—56 at \$18; 15 at 14½; 33 at 17½.

Hazel Green—10 at \$4; 10 at 4½.

Adriatic—230 at \$5. Rhode's Digings—15 at 40.

## ESMERALDA DISTRICT.

Wide West—5 at \$350; 4 at 350, 2 at 360; 10 at 350; 6

at 365; 2 at 347½; 6 at 350.

Antelope—10 at \$310; 3 at 320; 10 at 400, b'r 30 ds; 10

at 400; 10 at 400.

Esmeralda—10 at \$54; 8 at 54; 20 at 50; 15 at 50.

Real del Monte—7 at \$65; 19 at 70; 5 at 40; 10 at 45;

10 at 54½; 26 at 80.

Etna—140 at \$9 @ \$12. Lord Byron 25 at \$12½.

Coso—20 at \$20. Hawley 30 at \$30.

Utah—10 at \$109; 10 at 108; 10 at \$115; 10 at 117.

Silver Hill—25 at \$35; 35 at 36 25 at 45; 25 at 46; 5 at 46

Josephine—10 at \$21; 30 at 21½; 15 at 22; 15 at 23;

10 at 24; 5 at 25; 10 at 24½; 40 at 24; 25 at 21½.

Bamboo—10 at \$30; 10 at 52½; 5 at 80; 5 at 70.

Willow Springs—10 at \$32; 10 at 31.

Gov. Nye—10 at 10; 20 at 9; 5 at 9; 25 at 9; 70 at 10;

60 at 9½; 10 at 9½.

Cole—25 at \$25; 17 at 25.

Mina Prieta—20 at \$150.

Bollion, Van Horn District—100 at \$1½.

Union, Russ District—475 at \$3 to \$4½.

## COPPER STOCKS.

Napoleon Copper Co.—50 at \$32.

## WASHOE STOCK REMARKS.

[Compiled from the Daily Territorial Enterprise.]

TUESDAY EVENING, February 17th.

The wires between Virginia City and San Francisco have been down to-day, and, as a consequence, transactions have been rather limited. The enquiry of "What are you paying for — to-day?" has been answered by the brokers with "The wires are down." If San Francisco capital does not regulate the price of Virginia City stocks, it in a great measure creates the demand. Burnside, which gave such promise of fluctuation yesterday, has been ominously quiet to-day. Holders are afraid of selling at a price too low, and brokers, in the absence of advice from the Bay, are not disposed to risk much of an advance. It is sparingly offered, however, at \$60, without takers. There continues to be some dealing in Yellow Jacket at \$175 to \$200, and in the Union at \$14 @ \$15. The case of these two companies will scarcely be reached this time of Court. There is a lull in Zouave, but none can be had for less than \$10. An advance is anticipated by holders. Bullion is in request, and large quantities might be disposed of at our quotations of yesterday. We quote Yellow Jacket at \$175 to \$200; Union at \$15; Sacramento \$60; El Dorado \$50; Birdsall \$20; Zouave \$10 @ \$12; Dunn 6½ @ \$7; Oriental \$4 @ \$5; Hazel Green \$4 @ \$5; Belvidere \$3 @ \$10; Beach & Paxton \$35 @ \$40; Pride of Washoe \$15 @ \$20; North American \$1 @ \$5.

WEDNESDAY EVENING, February 18th.

Something substantial has been done in stocks to-day. Many of the la

gest transactions, however are not made public. There has been much activity in Burnside. San Francisco operators seem suspicious and touch sparingly. The highest offer to-day has been \$60. There is little in market, however at these figures. There is a large demand for Zouave at \$10 and 12 has been offered. Moscow has been in request at \$70 @ 75, but as most of the stock is held below, it is obtained here with difficulty. There has been some dealing in Bullion at our quotations of yesterday. Yellow Jacket is in demand at \$175—200 is asked. Union is saleable at \$13 @ 15. Winn, the principal owner in the Irving, is exhibiting very fair looking ore from that claim. It is limited in quantity, however. With the exceptions noted, our quotations remain at our figures of yesterday.

THURSDAY EVENING, February 19th.

This has been one of the most stormy and disagreeable days of the season, but trade has been quite active nevertheless. After slumbering for six months, the Cole suddenly awoke to notice, to-day, and a number of transfers were made at \$20. The resuscitation seems to be owing to San Francisco operators. Burnside has been inactive and is evidently on the decline. There have been no offers for it to-day. Texas is advancing at a moderate pace, and selling at \$5 @ 5½, assessments paid. Bullion is in continued request, and 50 feet changed hands to-day at private rates. In Zouave there is still some dealing at \$11 @ 12. This stock can readily be sold at these figures. Oriental is meeting with some favor, and holders are expecting to cut the ledge again in a few days. It is still in the market, however, at \$4 @ 5. There is enquiry for Sacramento at San Francisco rates, but little or none is offering. Fifteen feet Union sold at \$15; 5 feet Birdsall sold at \$20; 20 feet Texas at \$5; 160 feet Cole at \$20; 10 feet Pride of Washoe at \$15; 25 feet Sinaloa, Gold Hill, at 8. This latter Company has recently struck what is supposed to be the south extension of the Crown Point Ledge, and holders are looking for large figures.

FRIDAY EVENING, February 20th.

There has been considerable life in stocks to-day, and the promise for to-morrow is better. The demand for most stocks of accepted value exceeds the supply. Such a condition of the market is of course exceedingly gratifying to holders, and speaks well for the estimation in which our mines are held. Burnside has been inactive. Operators are careful, and holders nervous. Fifty dollars is the most that has been offered, and this sparingly. But little has changed hands. The Milton excitement seems to have subsided, and operations in the stock have apparently ceased. We cannot pretend to quote the price. Bullion is in request at \$30, but little can be obtained at these figures. The Pride of Washoe is advancing, and cannot be quoted at less than \$25. We have before us an assay of ore from this claim which shows \$216 to the ton—\$171 in silver and \$45 in gold. Sacramento is in demand at \$60 @ 65—about the Bay rates. It is held firmly at higher figures. Beach and Paxton is in request at \$40 @ 60, but none is to be had at these rates. This is a small claim of 238 feet, and holders are looking for a wild advance. Norton is inquired for, as well as its extension, the Recorder. Texas can be sold in small lots at \$7, assessments paid. Within the past ten days this stock has advanced from \$1 50 to \$7 per share. Fifteen dollars is offered for Zouave, to fill orders from below, and there is some inquiry for Gov. Nye at \$5 to 6. There is some talk of a strike, or an approaching strike, at Flowery Hill, but we can trace the report to nothing reliable. The Santa Rita Company struck the ledge in their tunnel in Spanish Ravine, north of the Cole Company, this morning. Five specimens of silver were taken out.

SATURDAY EVENING, FEB. 21.

Stock transactions to-day have been quite unimportant. Burnside is quiet—very quiet—with no bids of moment. It is offered in small lots at \$45 @ 50, without takers. Bullion is exceedingly active. Fifty feet sold this morning at \$30, and in the afternoon \$35 was freely offered for large and small lots, without accommodation. This advance is owing to no excitement. The location and proximity to the ledge seem to be the basis of the animation. Texas is still in demand at \$7 @ 8; and \$10 it is reported has been offered. Sacramento continues in request at \$60 to 65, with little offering. There is less inquiry for Zouave, but the stock is generally held firmly for an advance. It may be quoted at \$15. There is a light demand for Cole at \$20. No transactions in this stock are reported to-day.

There were sold: Hawthorn, \$1 at \$5; Hazel Green, \$1 at \$5; Pride of Washoe \$15 @ \$5 @ 5; Birdsall, \$19 @ \$20; El Dorado, \$50; Oriental, \$10 @ \$10; Texas, \$1 @ \$1; Union, \$1 @ \$1; Sierra Nevada, \$1 @ \$1; Sierra, \$1 @ \$1; Sigal, \$1 @ \$1; U. S. Mining Company, \$1 @ \$1; U. S. Tunnel, \$1 @ \$1; Uncle Sam, \$1 @ \$1; Utah, \$1 @ \$1; Virginia, \$1 @ \$1; Washington Ledger, \$1 @ \$1; York, \$1 @ \$1; Yellow Jacket, \$1 @ \$1; Zouave, \$1 @ \$1.

## ESMERALDA STOCK LIST.

[Corrected Weekly for the Mining and Scientific Press.]

	Bid.	Ask'd		Bid	Ask'd
--	------	-------	--	-----	-------

From our Edition of Feb. 16th.

### MINING EDUCATION.

In our last issue we referred to some of the disadvantages under which the California miners, as a class, labored by reason of the lack of a proper Mining Education. We also adverted to the fact that the popular antipathy against the application of science to mining, which was so prevalent among California miners, six or eight years since, has lately been pretty much laid aside. It is now very generally conceded that an empirical knowledge of mining is not the way to succeed in that difficult and uncertain branch of industry. The occurrences connected with the discovery and development of our silver and copper mines have produced such a change in public sentiment that, at the present day, it is rare to find a man who will openly avow, even if he secretly entertains, a belief in a necessary antagonism between theory and practice. Practice and science have now joined hands in the mines, and the time has passed when the former will venture "to go it blind" in the vain confidence of shallow empiricism, unaided by science.

The attainment of a passable mining education, when proper facilities and instructors are at hand, is not a work of so much time and study as many suppose. The difficulties and mysteries involved in becoming an expert in planning and working a mine, and in acquiring a practical knowledge of their geological and mineralogical characteristics, are no greater than are to be met with in many other subjects in the usual programme of practical and theoretic education. Experience is the foundation of success in all human undertakings; but the only value of experience is the facility which it affords us to deduce from previous results, a knowledge by which to overcome new or greater difficulties. This is identical with the inductive process of the man of science. But he that confines himself to his own limited experience, shuts his eyes against the lights of science; and, in despising the experience of others, he will soon find himself buried in the darkness of empiricism, while those who have entrusted him with their business will surely behold their undertakings enveloped in a labyrinth of difficulties, which must sooner or later result in common and promiscuous ruin.

A large mine is a complicated machine, and we might with quite as much propriety place a ploughman, with no mechanical experience, whatever, in charge of a double cylinder printing press, as to place a man, whose experience in mining is confined to what he has done himself, in charge of a mining operation of any magnitude. The art of mining involves a general knowledge of mechanics, surveying, mineralogy and geology. To understand working a mine—boring, sinking, pumping, winding, stopeing, hauling and ventilation—a tolerably correct knowledge of every leading principle in mechanics is needed. Without such knowledge the miner will find it impossible to decide upon the most economical means and arrangements for transport either in the mine or on the surface, the kind and capacity of engines needed, or the character and class of machinery best calculated to perform the work before him. Laying out the work properly, each part with reference to another, requires a knowledge of surveying. To ascertain the proper place to sink shafts, involving calculations of the dip and strike of strata, probability of water, faults, &c., implies a knowledge of geology: while by the aid of mineralogy only, can he determine the nature and value of the minerals upon which he is working, or which may chance to come in his way. On a correct conclusion with regard to each and all these points depends the success of the undertaking. The employment of experienced men, with liberal salaries, to superintend works of this description may safely be predicted as uniformly resulting in larger dividends to stockholders, and increased safety to mine and workmen. Experience, coupled with a proper application of science, is the only foundation of fitness for the position of Mining Superintendent. The lack of these requisites has cost English adventurers millions of pounds sterling—sometimes in the faulty opening of a mine, at others in the lack of mineralogical knowledge for determining the value and character of the mineral when found. We gave several instances of the latter in our last issue, we might multiply instances of the former *ad infinitum*.

It is to the lack of this latter information that we must attribute the delay in the development of the silver and copper mines of the State, a full decade beyond the time when

their existence should have been known as the result of actual explorations.

There is but one way to remedy the evils here passed in review and provide our State with a competent corps of mining engineers and superintendents—*A School of Mines must be established under the patronage and partial control of the State.* An institution of this kind is absolutely necessary to a proper development of our resources. We need it as a collector and conservator of mining knowledge past and progressive. We need it as an institution for the general diffusion of information in this branch of industrial science. We need it as a place where the working miner, the proprietor and the engineer may be drilled and schooled in the art of mining, in all its bearings. Such schools have long been in existence in nearly every country in Europe, where they are fostered with the greatest care by the different governments. We shall endanger our reputation as a progressive people if we much longer delay a movement in this direction. The losses of property and misdirected outlay of capital already scored up, (to say nothing of the sad loss of life,) and laid at the door of inexperience, would have liberally endowed half a score of such schools.

Our State Geologist, in his address before the Legislature two years ago, advised the early establishment of such a school. We have now a Legislative Committee on Mining. Is there any more important matter which can come before them than that which we are now discussing? Have they ever thought seriously upon it? If so, or if not, heretofore, why would it not be well, at the present time, to prepare the general outlines of a plan for such an institution, and let it go before the people, with a legislative endorsement, for future consideration.

Legislators are quite too prone to think that when they have enacted laws for the creation and collection of revenue, for the collection of debts and the punishment of crime, and, perchance, performed the herculean task of electing a United States Senator, they have fully discharged their legislative duties. They forget that there are other equally, if not more important duties to perform, in providing the means for properly educating the adult industrial class of society. This is universally done in Europe, at least to an extent sufficient to provide competent directors for all the great industrial interests of the land. We have neither time nor space to say more under this head than what will be merely suggestive; but we hold that it is quite time our Legislators should take this matter under consideration, and initiate some steps toward an ultimate accomplishment of the end in view. The present "let alone" policy must inevitably continue to result in serious losses, both to individuals and the State, and we shall be fortunate indeed, if our chief industry is not thereby soon completely buried in the darkness of that empiricism in which it is already so sadly floundering.

From our Edition of Feb. 16th.

### MINING INCORPORATIONS.

Notwithstanding the attempts at editorial pleasantry that are so frequently indulged in by our contemporaries, at the lengthening list of mining Companies, and the cumulative exhibits, of the many millions of capital which they represent, "on paper," each passing month brings additional evidence that this wealth is far from imaginary. The constantly increasing values of the figures which appear in our weekly stock reports, appended to the leading mines on the Eastern Slope, are stubborn facts, which must soon make plain to the most unbelieving that the footings of the aggregate "capital," placed as a value upon the mines now in progress of development, are not much too high. Imagination can scarcely form any adequate conception of the mineral wealth, which is soon to be developed on the Eastern Slope, and throughout the entire length and breadth of the "Great Basin," whose Western and Eastern rims are formed by the rocky slopes of the Sierra Nevada and Rocky Mountains.

Several of these earliest formed Companies, which, in the estimation of the great mass of people at that time, fixed their capital stock at an almost fabulous figure, have already reached the immediate vicinity of their incorporate value and their stock will no doubt, ere long, be quoted at a handsome percentage "above par." Indeed, one of them has already exceeded its par value and is quoted to day at more than 60 per cent. advance.

Numerous others, second and third class mines, are making such favorable developments, at the present time, as give good earnest of an early approximation of their stock to par value.

A few years since scarcely a merchant in San Francisco could be induced to invest a dollar in any mining enterprise. To do so was to lose *caste*, and endanger one's credit "on change." Even our foundrymen, could not be induced to invest a dollar, in a business to which they were then, as now, indebted for almost their entire business. Now things are entirely changed, and one can scarcely find a man in San Francisco who does not own "feet" in some mining claim.

What matter is it if a large portion of these projected companies should fail? All, or even a majority cannot hope to succeed. A sufficient number, however, will prove so remunerative as to return a handsome aggregate percentage on all the money invested. Hitherto the chief burden and losses attendant upon opening up the mines of California, have fallen upon the mining community almost exclusively, while the commercial and agricultural interests have been greatly profited at no risk. It is one of the conditions of mining, everywhere, that many individual losses must occur, which, however, are always made good in the general aggregate of profits; and it is creditable to the mercantile interest of this city that it has now taken hold of the matter of developing the mines of the State and is freely pouring out its capital for that purpose. The aggregate of these investments cannot fail to be highly remunerative, and will reward the losers even, in the increased business which they will create and concentrate in San Francisco. This city owes its very existence to the mines, and it betrays a feeling of selfishness in any man of means, to refuse to do his part in developing the interest upon which its prosperity depends. Every new Mining Company, whose organization is announced, is evidence that a new mine has been discovered, and that somebody intends to spend a little money for its development. Every such item is a matter of encouragement, and indicative that the great interest of the State is progressing. We trust the day is far distant when we shall fail to find in each morning's paper the announcement that some new mining organization has been effected during the previous day.

### SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

**LOWER CALIFORNIA****Colonization and Mining Company.**

THE AGENTS SENT TO MEXICO BY the above Company having returned per steamer Oregon; after having secured a tract of upwards of

**125,000 Acres**  
OF RICH AGRICULTURAL LAND,  
and a valuable silver Mine.

The Company is now prepared to furnish exact information to Colonists who have already engaged, or those about to engage in this

**SPLENDID ENTERPRISE.**

It proposes to send a vessel about the first of March next, and there being but a limited number of shares

**NO TIME SHOULD BE LOST BY COLONISTS.**

**Farmers Miners and Mechanics,**

With families are particularly invited by the authorities of the Territory. The land selected, in point of fertility of soil, is not excelled on the Continent. The climate is unsurpassed in the world. The richest Silver Mines known to exist in the Territory are in the immediate vicinity and bordering on the agricultural lands of the Colony.

N. B. Bear in mind that a share costs, at present, only \$200, which entitles the holder to free transportation for self, family, and articles of personal use and an equal share in the land, the Company's Silver Mine, etc. the whole enterprise, being for the mutual benefit of members only.

Full information can be had, and Mineral and Cotton Specimens seen, by applying at the Office of the Company, North-west corner of Clay and Front Street.

**Attention! Attention!**

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mount Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency. The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

**50 lbs. MARINE AND****Fire-Proof Paint,**

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Decks of Vessels, from Ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

**DIRECTIONS:**

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mixed with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur, three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chaudlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

**25 POUNDS FIRE-PROOF PAINT.**

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

**DIRECTIONS:**

HOUSE:—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF:—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

## FREDERICK KESMODEL,

Cutler & Surgical Instrument Maker

817 KEARNY STREET,

Between Jackson and Washington streets,  
SAN FRANCISCO,

RECEIVED a diploma at the Fair of the Mechanics' Institute, September, 1858, also in Sacramento in 1861 for California made Cutlery.

The attention of those afflicted with HERNIA, or Rupure, or any one interested, is called to his new method of fitting and adapting Trusses to the different case. It is a well known fact that there has as yet been no system of fitting Trusses. There are many different styles which have proven good in many cases, but they are uncertain and cannot be relied on, and in severe cases are altogether useless. The following are some of the advantages I claim for these Trusses above any and all others: First—The Pad is formed on the parts to be compressed by taking a plaster cast. Second—Having a correct model, it enables me to make the Pad of any desirable material, such as hair, ivory, etc. Third—The Pad is so adjusted to the spring that no movement of the body will move or displace it. There are many other advantages. Examine and judge for yourselves.

Dec 29 1m Facing Maguire's Opera House

## WHEELER'S

Amalgamating and Separating Pans.

It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to flow the trituration this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals over its competitors, as well as a still larger percentage in the amount of work performed.

\* These Pans may be seen in daily operation, at the Miner's Foundry, on First street in this city, where all interested are invited to call and examine for themselves.

## Beth's Hydraulic Pressure Wheel.

We have received, from the inventor the following description of this Wheel which we give, with the accompanying illustrations. In consequence of numerous letters of enquiry received by the inventor we are requested to state that this description is presented in place of the circular, the publication of which will necessarily be delayed for a short time.

It has been the object of the inventor to produce a practical water wheel, adapted to the peculiar necessities of the Pacific Coast—one that shall be simple, compact, durable and effective—rendering the small streams, which tumble down from the mountain ranges as available for water power as the larger and more sluggish ones which flow through the valleys. Although the principle upon which this wheel is based is in some respects what is usually termed "reaction," still its construction is such that the action of the water is direct, and it is exclusively a "pressure wheel," the water having nowhere in its passage a higher velocity than three or four feet per second.

The above engraving is a representation of the wheel as applied to high falls. The water is conveyed in sheet on pipes from the ditch or flume, admitted at the top of the cylindrical casing enclosing the wheel and discharged through the draft pipe at the bottom. In Fig. 2, one half of the casing is removed (the two halves are alike) showing the interior and also a view of the wheel, which consists of three steel blades or buckets diverging gradually from the central brass collar between which the inside contact flange the buckets are clamped and adjusted to give the required openings between them.

The buckets revolve in the space between the annular crown confining the water in its passage to the openings. The ample space around the wheel allows the water to approach it from all sides, with the full pressure due the fall; and the effective pressure upon the convex surface of the buckets in the direction of the arrow, is as their inclination which the openings between them is a measure. When the velocity of the wheel reaches 60 per cent. of the velocity due the fall, the tendency of the water toward the openings ceases, and it passes directly to the center of the wheel, passing inward the depth of an opening, while the wheel is revolving the length of a bucket. As the water passes the

## J. M. BETH'S HYDRAULIC PRESSURE WHEEL.

FIG. 2.

opening, it is divided by the central flanges and collars, one half passing off at each end through the crown; the whole inside being left open,

allowing the water ample room for its passage into the draft-pipe below.

The tendency of the water to go directly to the center of the wheel, with a constant pressure due the fall, on the whole convex surface of the buckets, and in a slow smooth and even flow, is in accordance with both theory and practice, and requires no directing surfaces, guides, or shutters, to give it that direction. The practical working of the wheel shows that the result is secured by the curve of the buckets which is such as to give the water a uniform motion through the wheel (in whatever position they may be adjusted) and to their cutting edge and finished surface and to the rapidly changing position of the opening between them which does not allow time to overcome the inertia of the water or draw it toward them.

The pressure of the water is equally distributed around the wheel. There is therefore no pressure on the bearings, nor is there any lateral pressure.

To secure the perfect running of the wheel between the annular crown, without leakage or friction, the bearings of the shaft are placed in hexagonal boxes lined with lignum-vitæ, and adjusted by set screws, as is shown on the hubs on each side of the casings. In these bearings, in the solid and unyielding cast iron casing, and with the wheel finished in a lathe and perfectly balanced, there is no vibration or trembling, when running at high velocities; and the least possible amount of friction.

Provided clear water cannot be obtained for lubricating the bearings and sealing them to exclude the air from the draft below, oil may be used and hemp packing on the inside of the bearings.

Muddy water does not injure the buckets, as a small space is allowed between the edge of the buckets and the crowns, without loss from leakage, it being counteracted by the centrifugal force imparted from the velocity of the wheel.

One of the most distinctive features of this wheel is the simplicity and economy with which it is applied to different kinds of machinery.

For Circular Saw Mills, it is so constructed as to give the required speed when placed on the saw

harbour. A 16-inch wheel put in operation last fall, near Aurora, N. T., drives a circular saw with power sufficient to cut 1000 feet of boards per hour.

The wheel is placed on the saw harbour and 18 feet above the foot of a fall of 40 feet.

In building a mill of this description no sawed lumber is required before putting it in operation. A site being selected, not more than 27 feet above the level of the back water, (the draft cannot well be made perfect beyond that point, and perhaps not even to it, at high altitudes, it being limited by the extent of the atmospheric pressure; as far as it goes, however, it is fully equivalent to the direct pressure above the wheel providing the draft pipe is air tight and terminates in the back water below,) sleepers are bedded into the ground upon which the carriage and wheel are placed. The water is conveyed to and from the wheel in a sheet-iron pipe.

The durability and economy of this mill (its cost is less than half the usual amount,) and the ease with which it is almost instantly stopped and started and the speed controlled, are qualities which will be appreciated by those acquainted with the business. Small wheels may be applied with the same advantage to shingle saws, to small mills for grinding grain, and various other purposes. When the required motion is slow, as in quartz mills, the wheel has a great leverage, and the speed is reduced with light belts and pulleys, and with little wear and tear, compared with what would be required for raising speed from a lower velocity.

For flour mills the wheel may be (on falls of any considerable height) placed on a level with the pulley on the spindle of the stone and the power transmitted by a single belt, while the position and speed of the wheel affords equal facilities for driving the other machinery of the mill.

The inventor of this wheel knowing that its success depends entirely upon the proper application of the principle has each wheel constructed in accordance with his own specifications.

cification of size, proportion and finish, to suit the height of fall, quantity of water, at different times and seasons of the year, and the purpose for which it is to be used; and as the wheel is complete and in running order on leaving the shop its application is easy and success certain in the hand of any mechanic of ordinary ability. When the wheel is applied to low falls the outer or cylindrical portion of casing is removed and it is placed in the open flume, the size being made to suit the volume of water.

The speed of the wheel is exactly in proportion to the quantity of water passed through it therefore a self-acting gate which regulates the supply, regulates the speed accordingly. This has been found to work perfectly in practice.

The guarantee upon which the wheel is furnished is that it shall equal in power the Overshot Wheel. No regular scale of prices can be given in consequence of the different degrees of finish, proportions and applications required. It is however much less than that of the most perishable wooden structures of the kind.

Full information concerning the wheel may be obtained from the inventor personally, by applying at the Miners' Foundry, on First Street, San Francisco, or by addressing

J. M. BETH.

Miners' Foundry, San Francisco.

[FROM THE LONDON "MINING AND SMELTING MAGAZINE."]

#### THE MEXICAN METHOD OF AMALGAMATION.

BY JAMES NAPIER, JUN., F. C. S.

Late Chemist and Assayer to the Guanajuato Mint, Mexico.

[CONTINUED.]

In the introductory section I gave a brief sketch of the history of the Patio amalgamation process, and a few analyses showing the general composition of some of the silver ores in certain of the Mexican mining districts. In the present section I propose describing the methods employed for grinding the ores and separating the gold; it being understood that my description refers particularly to the district of Guanajuato. As the mode in which the sales of the ores are conducted is characteristic, I may be permitted to give a prefatory notice of it.

#### SALES OF ORES.

Some of the poorer mines of Guanajuato are worked by what are called "Buscones" (searchers.) These are miners answering to the Cornish "tributers," who work without any definite pay, but receive half of the value of the produce they extract from the mine. At stated times a sale takes place at each concern, when these *buscones* arrange in separate lots whatever they may have extracted since the previous sale, in the court-yard of the mine. These lots of ore are cunningly laid out, so as to expose the richest portions to the view, some showing much taste in their arrangement; and each miner stands near his own lot and keeps it constantly sprinkled with water, which has the effect of making the mineral look darker and richer.

The various "Rescatadoras" (purchasers) take from each lot a small portion of ore, as average a sample as possible, which they have finely ground, and tried or assayed on the spot. This is done by placing about a handful of the ground ore in a "Jicara" or small round bowl, washing away the whole of the earthy particles, and judging from the metallic portion remaining of the richness of the ore. It is really astonishing to mark how by this rude process those who constantly practise it are able to arrive at results so near the truth. However, many purchasers have assays now also made by fire for greater accuracy, and in this case the samples are obtained the day before the sale. These assays are either made by scorification, or by smelting the mineral with red lead, crude carbonate of soda, a little charcoal and salt, and cupelling the resulting button of lead.

At the regulated hour for the sale a bell strikes, as a signal that it is about to commence. The person entrusted with the sale takes his place successively at the foot of each lot, and every buyer in turn whispers into his ear what he wishes to give for that parcel. When all have given in a price the lot is called over to the highest bidder, the rate of his bid being named; where two buyers bid the same amount, the first bidder gets the preference. The person acting as auctioneer and the rescatadoras thus move from lot to lot till the whole of the ore in the yard has been disposed of. The weight of these lots of ore is not ascertained by weighing,

but has to be judged of by the eye. This, like the trying of the ore, is accomplished by those who have had long practice with remarkable accuracy; and on the whole, one of these sales is rather exciting. The moment a lot of ore is called out to a buyer, the miner has nothing more to do with it; the purchaser having to remove it from the ore yard to his reduction works, or *Haciendas*. This is usually done packed in sacks on mules' backs; the ore, if in very large lumps, as it often is, being previously broken into moderately sized pieces. Each sack holds about 175 lbs., and two of them are loaded on each mule.

#### GRINDING THE ORES.

The first operation to which these ores are subjected is a coarse stamping. This process is carried out in what are termed "morteros" or "molinos," which are very similar to the stamps used at the Cornish tin mines. The extent of these *morteros*, or the number of heads, naturally depends on the extent of the "Hacienda," and they are worked by mule power, excepting in a few districts, where steam or water is employed. The ore, as it is fed to the stamps, is in pieces about the size of the fist; as it is stamped, it falls into a piece of strong hide, perforated with small holes, and fixed in an inclined position. What does not pass through the holes is again returned to the stamps, whilst the finer portion, called "*Granza*," a very coarse sand, is conveyed to the "arrastres" or fine grinding mills. One stamping mill or battery, with ten stamp heads, worked by six mules which are changed every six hours, is capable of stamping from three o'clock in the morning till seven in the evening forty cargas of 350 lbs. each.

[Here follows an illustrated description of the Mexican *arrastre*, with particular directions for constructing the same. California miners are so well acquainted with the principles and working of this machine that there is no necessity for reproducing that portion having reference to it, until we come to the concluding paragraph, which we subjoin.] As soon as the bottom of an *arrastre* has been put in, new grinding stones are set to work to grind "*Cabeceilla*" (the residue remaining after washing a torta) mixed with water. This ensures the whole of the interstices being filled up, and is continued for one day, when a second stone is attached. At the end of three days a third is added, when the grinding of poor ores may be gone on with, and after four or five days the fourth stone is added and the fine grinding gone on with.

#### FINE GRINDING IN ARRASTRAS AND EXTRACTING OF GOLD.

In districts such as Guanajuato, where the ores contain gold as well as silver, the former metal is generally in such small quantities that if extracted as an alloy with the whole bulk of the silver it would scarcely pay the cost of extraction, at least in Mexico, but by adopting the plan of keeping the *arrastres* charged with mercury during the grinding, the gold is concentrated and made to yield very handsome profits. When this method of concentrating the gold was first used in Mexico we are not at present aware, but Humboldt states that he was informed it was in use in some districts in 1804, but that it was not employed in Guanajuato, where he was, nor did he see it in operation.

The quantity of ore from the stamping mills charged to each *arrastre* at one time varies according to circumstances; however, in the best regulated works in Guanajuato, where the grinding is without doubt carried to greater perfection than in any other district in the republic, an *arrastre* of the dimensions given above is charged with from six to seven hundred pounds. To this is added a barrel of water—about ten gallons—which is enough to bring the mass to the state of a thick cream. On the quantity of water added depends much the quality of the grinding which will result. Humboldt states that in no part of Europe had he ever seen such fine grinding as in the Great Haciendas de Plata of Guanajuato. If the *arrastre* be a new one, or one from which the amalgam has just been removed, there is added from five to ten pounds of silver amalgam: that is, after the *arrastre* is well "*ascentada*," or in good working order. Some amalgamators prefer having this amalgam very "dry," or containing but little free mercury; whilst others again prefer employing it with more mercury. However, it appears to be certain that the less mercury it contains the better, up to a certain point. The reason given for adding amalgam instead of mercury alone, is, that if mercury only were added

it would run immediately into the crevices of the bottom, and thus be of little or no use; whereas the amalgam is spread by the action of the stones over the whole surface of the bottom. This I think is true; but it is also evident, from experiment, that amalgam will take up gold and silver much more readily than pure mercury, and that up to a certain extent the freer the amalgam is from mercury the better will it take up the gold and silver. Might not many of the gold amalgamating machines patented of late years in this country have succeeded much better had amalgam been added instead of so much pure mercury; I mean, amalgam from which only a small quantity of mercury would ooze when pressed between the finger and thumb.

From time to time the 24 hours (the usual time required to grind the above weight of ore) water is added to the *arrastre* as follows:—The *arrastres* are charged about four o'clock every morning, when, as we have already stated, one barrel of water (10 gallons) is added; at nine o'clock another, and sometimes one and a half; at eleven o'clock another barrel and a half; at twelve o'clock one barrel; at three o'clock, three barrels, and at five o'clock four barrels—in all twelve barrels, or about 120 gallons of water. This quantity will vary somewhat with different classes of ores. The grinding should be so perfect that no grittiness be felt between the fingers when the hand is inserted into the mass. As the operation goes on, the amalgam gradually searches into the crevices of the *arrastre*. Every second morning, a small portion, called a "*Tentadura*," or sample of the amalgam ("*Pella*") is taken from each *arrastre*, cleaned well with water, and its condition examined. From its "dryness" or "moistness," that is to say, from the greater or less quantity of mercury which can be expressed by pressing it with the thumb against the inside of the "*jicara*" containing it, is judged how much, or if any, fresh mercury will have to be added to the next grinding; for the amalgam is not removed but at the shortest every three months, unless the ores be unusually rich in gold, when the *arrastres* are freed from amalgam. The usual amount of fresh mercury added to each *arrastre* during grinding is about half a pound every second day. However, this will vary very much with the ores operated upon; but as a rule the amalgam should not contain more than about 20 per cent. of gold and silver. At the end of 24 hours, when the grinding is concluded, the "*lama*" or slime is baled out with wooden bowls ("*Bateas*") about half a vara in diameter, into a barrel, in which it is carried and poured into a place prepared for its reception. In some haciendas it is baled into a small wooden launder which leads to the receptacle; and in other works each *arrastre* is furnished with a large plug near the bottom, which when opened, allows the thin slime to run through conduct pipes to the receptacle. When the slime is moved by hand with a bowl, there is laid on the bottom of the *arrastre* a small plate of lead or iron, so as to prevent the bottom from being scraped and any of the rich amalgam being removed by the bowl. This operation lasts but a very short time about half an hour, and when concluded a fresh charge of *graza* from the stamps is added, and the grinding again gone on with as we have described. Two mules, which are changed every six hours, are attached to each *arrastre*. In this operation there is generally an augmentation of weight to the extent of about 8 or 10 per cent. from the wearing away of the grinding-stones. In most cases the *arrastres* are arranged in a double row in a house called a "*Galera*" (galery.) The bottom of an *arrastre* will last about twelve months, but the "*Voladoras*" or grinding stones do not last more than a month, and in many instances not even so long.

#### A NON-AMALGAMATING ALLOY.

There appears to be an alloy of gold and silver which will not combine with mercury. My friend, the late Mr. Henry Mackintosh, who had long experience in these matters, stated to me that on two occasions he had found an alloy of gold and silver which he could not get to amalgamate after continued grinding with mercury for six months. Mr. Mackintosh could not remember the composition of the alloy, but he thought it contained about 50 per cent. of silver and 50 per cent. of gold. Sonneschmidt, in speaking of the action of mercury on gold states—"On various occasions I have seen native gold finely divided that would not combine with mercury, which I thought was owing to the surface being covered with some foreign matter; at the same time

[CONTINUED ON 6th PAGE.]

# MINING AND SCIENTIFIC PRESS.

## SAN FRANCISCO MINING NOTICES.

### ASSESSMENTS LEVIED.

Assessments upon Mining Stocks have been levied as follows:—

Garibaldi.—Assessment of \$1 per share, levied March 2nd.

Sutro.—Assessment of \$1 per share, levied Feb. 23, payable March 23.

Silver Quartz Mill Co.—Assessment of 5 per cent. levied Feb. 23, payable March 28.

Helvetia.—Assessment of 25 cts. per share, levied Feb. 17, payable March 10.

Zouave.—Assessment of \$1 levied Feb. 22, payable Mar. 20.

Rogers.—Assessment of \$5 per share levied Feb. 4, payable Mar. 15.

Sam Wright.—Assessment of 50 cts. per share levied Mar. 2, payable immediately, delinquents to be sold Apr. 2.

Napoleon (copper).—Assessments of \$3 per share levied Mar. 3, payable in 30 days.

Golden Age.—Assessment of one dollar per share levied Feb. 24, payable March 26.

Washoe Gold & Silver.—An assessment of 2 per cent. on capital stock was levied Feb. 16, payable Apr. 1.

Rhodes' Diggings.—Assessment of 25 cts. per share levied Feb. 26, payable Mar. 5.

Texas Co., at a Meeting held Feb. 14, levied an assessment of one dollar per share, payable to the Secretary in Virginia City.

Santa Rosa Co.—February assessment of 20 cents per share now due and payable.

Madison Co.—An assessment, two dollars per share, was levied Feb. 17, payable immediately, at Office, 600 Merchant St.

Union Co.—An assessment of one dollar per share was levied February 16, payable on or before March 25.

Pena Co.—An assessment of \$3 per share was levied Feb. 5, one half payable March 1, balance April 15.

Kossuth Co., Devil's Gate District.—An assessment of 10 cts. per share was levied Feb. 7.

Constitution Company levied an assessment of 25 cts. per Feb. 11, payable immediately.

La Plata Oro Co. levied an assessment of five dollars per share, Feb. 9, payable at Office of the Secretary in Virginia City.

La Plata Co. levied an assessment of 50 cts. per share Feb. 2nd, payable at Office of the President.

Alamo Co. levied an assessment of 50 cts. per share, Feb. 11, payable on or before March 20, at 115 Cal. Street San Francisco, or at office in Carson City.

Tucker Co. levied an assessment of 25 cts. per share, Feb. 11, payable immediately at 608 Merchant St.

Hawley Co. levied an assessment of one dollar per share, on Feb. 9, payable on or before March 12, to Superintendent at the mine, or Secretary at Office.

Slate Range Co. levied an assessment of 50 cts. per share, Feb. 4, payable, March 15.

Moss G. & S. M. Co.—An assessment of 50 cents per share was levied Jan. 27, payable at 428, Montgomery St., or to the Superintendent at the mine.

White Cloud G. & S. M. Co. levied an assessment of 75 cents per share, Jan. 27, payable to the Secretary, at 428, Montgomery St.

El Dorado G. & S. M. Co.—An assessment of One Dollar per share was levied Jan. 23, payable to the Sec. or to the Supt.

Gaudaloue S. M. Co.—An assessment of \$30 per share was levied, payable on or before March 1st.

El Tesora Mining Co.—An assessment of \$1½ was levied Jan. 27, payable at office on or before Feb. 27.

Polar Star G. & S. M. Co. levied an assessment of 50 cents per share, February 4th, payable on or before the 4th of March, at the Office in this city or to the Superintendent at the mine in Aurora, (Esmeralda.)

Dios Padre G. & S. M. Co. levied an assessment of 3 dollars per share, Jan. 31, payable in 30 days, also an assessment of 2 dollars per share, payable in 60 days, at office 502 Montgomery street.

Beckwith G. & S. Mining Co.—An assessment of 25 cents per share was levied Jan. 24, payable immediately.

Sonora Mining Co.—An assessment of 25 cents per share was levied Jan. 23, payable immediately.

Overman Mining Co.—25 cents per foot, Jan. 29, payable within ten days.

Chs. Caney Mining Co.—50 cents per share, Jan. 21, payable on or before Feb. 20th.

Sierra S. M. Co. An Assessment of \$2½ was levied Jan. 22—payable immediately, at Office 575 Mission St.

Mount David-on Co.—An Assessment of 50 cents per Share was levied, Jan. 23, payable on or before March 1st, at Office 47 Montgomery Block.

Adriatic.—Fifty cents per share, payable at No. 4 Armory Hall, San Francisco, or to the Superintendent at the Mine.

Hattie G. & S. M. Co.—Thirty cents per share, levied Jan. 31, payable at Office in San Francisco, or at the Mine.

Hale & Norcross.—Assessment of Ten Dollars per Share, levied Jan. 31—payable at the Office in this city, or to John Skae, at the Mine, on or before Feb. 25.

Mina Prieta S. M. Co.—An Assessment of Five Dollars per Share was levied, Jan. 31, payable on or before March 5th—at Office, cor. Montgomery & Jackson Sts.

Recorder Mining Co.—An Assessment of One Dollar per foot was levied Jan. 19, payable half on or before Feb. 18, and balance on or before March 20.

Hale & Norcross S. M. Co. have levied an assessment of \$5 per share payable on or before Jan. 26th.

Martin White.—An assessment of 20 cts. a share was levied, Jan. 2.

Oriental G. & S. M. Co.—An assessment of 50 cts. per share was levied, Jan. 14, payable at Office, cor. Sutton Avenue and C St., Virginia City.

Baltimore America Consolidated.—An assessment of 50 cents per share was levied, Jan. 5.

Savage.—An assessment of \$35 cents per share was levied, Jan. 7.

Hawley.—An assessment of \$1.00 per share was levied Feb. 9, payable March 12.

Cole S. M. Co.—An assessment of One Dollar per share was levied, Jan. 10, payable, Feb. 1.

United States M. Co.—An assessment of six and two-thirds cts. per share was levied Jan. 10, 1863, payable to the Superintendent at the mine, or to the Secretary, Rooms 7 and 8, Government House, San Francisco.

Sierra Nevada S. M. Co. levied an assessment of \$15 per share, Jan. 15—payable Feb. 18.

Lady Bryan.—An assessment of 70 cts. was levied, Jan. 13, payable on or before Feb. 16.

Ida G. & S. Co. (Russ District)—An assessment of \$1 was levied, Jan. 14.

### COMPANY MEETINGS.

Chs. Caney Co.—Special meeting of stockholders will be held on Wednesday, March 18, to consider the propriety of an increase of capital stock.

South Utah Co. will hold its annual meeting for election of Trustees, etc., at No. 608 Merchant St., March 20.

Nevada Co. will hold its annual meeting for electing Trustees, etc., at 608 Merchant St., March 20.

Annie Laurie Co. will hold its annual meeting for election of Trustees, etc., March 19.

### ASSESSMENT SALES.

Sales of Stock for non-payment of assessments are advertised to be sold as follows:—

Oriental Tunnel Co. will sell, on Saturday, Mar. 28.

Mars will institute proceedings against delinquents, Mar. 16th.

Planet will institute proceedings against delinquents Mar. 16th.

Meredith.—Annual meeting of stockholders will be held Monday, Mar. 16, at 2 P. M., at 712 Montgomery St.

Texas Co. will sell delinquent shares, on the 14 of March.

Meredith Co. will sell delinquent stock, March 2n.

Coso Co. will sell delinquent stock, March 18.

Moray Co. (V. City).—Suits for delinquent assessments will be commenced, March 14.

Michigan Co. (Gold Hill) will commence suits for delinquent assessments, March 16.

North Potosi Mining Co.—Sales delinquent stock will be made March 17.

Peytona G. & S. Mining Co.—Sales of delinquent stock will be made March 1st.

Cole Silver Mining Co.—Sales by Jerome Rice & Co., 327, Montgomery St., San Francisco, on the 25th of February.

Combination G. & S. Mining Co.—Sale by E. S. Spear & Co., at 433 California St., on the 10th day of March next.

Lady Bryan G. & S. M. Co.—Shares of delinquent stockholders will be sold at auction for assessments, at No. 400, Montgomery street, on Jan. 27.

Desert Mining Co.—Shares of delinquent stockholders will be sold at auction, for assessments, at No. 400, Montgomery street, Jan. 27.

### GENERAL NOTICES.

Yellow Jacket.—Corporate Deed now ready for signature at office of H. G. Maynard, Gold Hill, N. T.

Jenny Lind (Esmeralda).—Owners of ground in this Cot are requestes to call and sign deed of trust at 608 Merc., an St.

Mount Hope Co.—Persons claiming stock are requested to present title papers for examination till March 16.

U. S. Mining Co.—All persons claiming stock are requested to present title papers for examination at Nos. 7 & 8 Government House.

Caution.—D. M. Tyrell warns persons against purchasing a certain 10 feet of ground in the Wellington Co., standing in the name of J. B. Magee—also 20 feet, standing in name of W. Williams. (See Territorial Enterprise.)

Ashland Co.—L. A. Gould, in the name of the Moss Co. notifies the Ashland Co. that their westerly drift has cut the Lamb ledge, in the Moss Co.'s ground, from which the Ashland Co. is forbidden to extract any valuable metals.

Coso Silver Mining Co.—The Office of this Company has been removed from the Stevenson House to Nos. 11 and 13 Court Block, No. 636 Clay street between Montgomery and Kearny. Entrance on both Clay and Merchant streets.

Henry Martin G. & S. M. Co.—"Thomas Wallace, Trustee." gives notice that whereas certain parties illegally claiming to be Trustees of this Company, have changed the name of the Corporation to the North Star G. & S. M. Co., and illegally elected officers for the same, the public are cautioned against such acts, etc.

THE SWEZEY Co., Gold Hill, give notice that Baltic Company have wrongfully claimed and worked their ground since July, 1860.

THE CHIMNEY ROCK Co., lying next west of the Virginia Co. claims have notified the Hazel Green, Tingley and Beach & Paxton Companies that they are trespassing upon the Chimney Rock Co's ground.

## MINING AND SCIENTIFIC PRESS.

THE ONLY MINING, MECHANICAL AND SCIENTIFIC PAPER ON THIS CONTINENT.

THIRD YEAR! VOLUME VI.—NEW SERIES!

A new volume of this extensively circulated paper commenced Sept. 11, 1862. It is intended that every number shall be replete with information concerning Mining, Scientific, Mechanical and Industrial pursuits, together with several original engravings, of new inventions, etc., prepared expressly for its columns.

This paper is devoted to the above purposes, together with the interests of Science, Arts, Agriculture and Commerce, and any general information that may be of interest to the reader; and it is the intention of the proprietor to spare no pains or expense in making it equal in interest and valuable information to any paper yet published.

### The Mining Interest!

Will find it of great value, as it will contain all the news appertaining to Mining, the prices and sales of Mining Stocks, new inventions of Machinery adapted to that purpose, and of everything generally that may be of service to the Miner.

### The Inventor!

Will find it an excellent medium for the purpose of bringing his invention into notice, of ascertaining the progress of invention in this and other countries, and also of receiving any information that may be necessary in obtaining his patent, the proprietor having had great experience as a Patent Agent, together with facilities at Washington that enable him to obtain Patents with dispatch.

### The Mechanic and Manufacturer!

Will be greatly benefited by its perusal, as each number will contain several original engravings of new machines and inventions, together with a large amount of reading matter appertaining thereto. We are constantly receiving the best scientific journals from all quarters, from which we shall continue to extract whatever may be of benefit or interest to our readers.

### To Chemists, Architects, Millwrights and Farmers!

This Journal will be invaluable. All new discoveries in Chemistry will be given, and a large amount of information of great service to Architects and Millwrights will be found in our columns. The Farmers and Planters will not be neglected, engravings will be given of agricultural implements, and the farming interest generally will be amply discussed.

### Terms.

To mail subscribers:—Four Dollars per annum.

### Club Rates.

Five Copies for Six Months, \$8.  
Ten Copies for Six Months, \$16.  
Ten Copies for Twelve Months, \$30.  
Fifteen Copies for Twelve Months, \$44.  
Twenty Copies for Twelve Months, \$56.

For all clubs of Twenty and over, the yearly subscription is only \$2 80 Names can be sent in at different times and from different Post-offices Specimen copies will be sent gratis to any part of the country.

EWER & SMITH, Publishers,

Room 27, (formerly) U. S. Court Building, Corner of Washington and Battery streets, San Francisco.

## THE HUMBOLDT MINES.

Mr. James B. Glasgow called at this office a few days since and exhibited some fine specimens of silver bearing rock from the Sheba and Ben Franklin veins, in Star district, Humboldt Co. The rock is evidently very rich. Accompanying the specimens were several buttons of silver, one of which weighed over one ounce, taken from a small piece of rock from one of the samples shown. Mr. G. informs us that active operations are in progress toward opening the Sheba and Ben Franklin ledges, at different points along their line of direction. Not less than eleven tunnels are now in progress, upon and approaching these two leads, which run parallel with each other, and less than 1000 feet apart—the Sheba being the uppermost one or the one highest up the hill.

The Ben Franklin lead was first opened directly upon the out-crop, by the Whitmore company, of which, our informant is a member. The rock before us was taken from a tunnel about 30 feet in length, which cuts the vein about 20 feet from the surface. The Union Band company is running a tunnel to strike both leads, and are now 200 feet into the hill.

The Sheba company are still at work upon their ground as described in a recent issue of this paper.

A large portion of the stock of this company is held in this city and the company has, within a few days, been placed upon a thorough working footing, under the superintendence of Mr. RICHARD POWNING, an experienced miner. Mr. GLASGOW assures us that we were correct in contradicting the rumor started sometime since, to the effect that, a considerable quantity of the Sheba rock had been crushed in Falls mill, near by the vein, with no other result than a generous yield of lead and antimony. No rock from that lead has yet been crushed or amalgamated except by hand process, and the assays thus made have resulted to the most unequivocal satisfaction of all parties concerned. Arrangements will soon be made for reducing and amalgamating on an extensive scale. The American Basin company has struck the Sheba ledge, in their tunnel and found it very rich. This ledge is about 15 feet thick, instead of less than 15 inches, as stated in a morning contemporary, a few days since. All the ledges in this vicinity are very heavy—the Ben Franklin is about 11 feet thick, the San Bernardino 15, and the Mammoth about one hundred feet thick. The Ben Franklin shows native silver in thin sheets, like strips of tin foil. There are numerous other leads in this, the Star District, which are known to be rich in silver; among which we may mention the Yankee, the Mammoth, the Alamo, Yellow Jacket, J. W. Davis, etc., all of which are in progress of development by tunnels and shafts. Santa Clara joins this district on the North and has many rich leads, upon which much work has been done, by tunnels and shafts, some of the former having been driven from two hundred to two hundred and fifty feet.

## PRINCE ROYAL AND HUMBOLDT DISTRICTS

are also undoubtedly rich in mineral, although not so much developed as those previously named.

## UNIONVILLE,

in Buena Vista district is the county seat. More attention has been devoted to the improvement of town property in this than any other portion of the county. It is thought by some not to be so rich in mineral as other portions of the county, but this is probably owing to the fact of its not being so well developed, attention, as already intimated, having been more particularly directed to another channel. Another year will probably place it on very nearly, or quite equal footing, in mineral value, with any other district in the county.

## ST. MARYS,

a small district lying between Buena Vista and Star Districts possesses more topographical advantages for mining operations than any other in the country, and the best water power in that portion of the country. The same series of leads which enrich Star district, pass through this also, and probably continue on to Buena Vista.

## MILLS.

There are four mills in the county about ready for operation—three of which, viz.: Dodge & Co., and Richard Homfray, at Star City, and W. C. Fall at Unionville, have already had their machinery in operation, but have not yet done any regular work. Fall, we understand, has crushed

several tons of rock from the National lead, but we have heard of no returns.

Judge Watson is now putting up a mill at Star City, near Homfray. Other parties we believe are about locating sites for mills or have already done so. These mills with the exception of Homfray's are all to be driven by water, of which there is an abundance the year round. Mr. H. has put up a steam engine, for present use, but will erect a water wheel during the coming summer.

## HEAVY INVESTMENTS.

Col. O'Connor, of this city, agent for English Capitalists has recently invested some \$30,000 in extensions of the Sheba and Ben Franklin leads. Other parties—capitalists—have also invested not less than \$75,000 in the same locality within a few weeks past. The above facts show, most conclusively, that Humboldt is far from being a "failure," as has been asserted in some quarters. The coming season will doubtless reveal some most astonishing developments in the distant Humboldt and Reese River regions. We are collecting facts for a full and elaborate description of the Humboldt region which we hope soon to lay before our readers.

## GOLD IN HUMBOLDT.

Gold bearing quartz has recently been discovered about 15 miles East of Star City. The ledges are apparently very rich and carry coarse gold. A gentleman recently from Humboldt informs the Territorial *Enterprise* with regard to this discovery, that quite a rush has been going on to the new "Sierra District," in the range of mountains some fifteen or twenty miles East of Unionville, and that locality now boasts a population of nearly two hundred souls. The principal ledges in it are the Croesus, a marvellously rich gold ledge; the Badger and the Annie, silver ledges, and the Great Eastern series of six ledges—also silver. The Great Eastern is forty feet wide, and the Annie and Badger, contain but little base metal, and assay \$9,000 to the ton. Placer diggings have been discovered in the vicinity of the Croesus which yield from \$15 to \$20 a day to the hand.

## AGRICULTURAL DEVELOPMENTS.

Recent explorations are developing the existence of much valuable agricultural land in the region of the Humboldt mines. A beautiful valley, of quite large extent, undoubtedly capable of high cultivation, has quite recently been discovered some 30 miles north-east of Star City. Up to Feb. 21st no snow had fallen, to lay any considerable length of time, in Unionville, and but a few inches in Star City. In the valleys below, the ground had not even been whitened by the wintry mantle, and the cattle there were enjoying themselves hugely, in their immunity from winter blasts and in the abundance of green herbage.

This region, as soon as spring opens, will afford an abundance of employment for laborers, who will be needed to open and develop the mines already discovered. Unionville, Star District, contains an abundance of water power for milling purposes. There is also a plenty of wood for fuel and mining timber. Wood is now selling at \$8 and \$10 per cord.

## REESE RIVER.

The Reese River excitement still continues with unabating zeal. The town, Clifton, as it is called, recently laid out there, is progressing finely. Thirty or forty new comers recently jumped a large number of lots previously located, but subsequently gave them up to the original owners. The mineral developments are progressing finely. One hundred feet of the Comet ground recently changed hands at \$40 per foot. Wells, Fargo & Co. have already established an agency there, and thus placed the inhabitants of Clifton in direct communication with 'the rest of mankind.' The arrival of a "Lady" is duly chronicled. She is to take charge of an hotel in the new city, which already boasts of its "Occidental" and "Lander House." The inhabitants are looking anxiously for the return of Dr. Veatch, who proposes to open an Assay office there, by which the miners of that region may be enabled to ascertain the value of their "feet" and "indications," without the tedious delays of forwarding their sample specimens to Virginia City. The Dr. is one of the most reliable Assayers and Mineralogists we have among us, and appears to be held in high esteem by the pioneers of that distant mining outpost, with the development of which he is most intimately connected. We have the promise of an article now and then from his pen, for which the Dr. will please consider this paragraph a reminder.

A MINING TRANSACTION.—A miner from the mountains stepped into the salesroom of one of our most wealthy merchants, about four weeks since, stated that he was "flat broke," and asked for \$150, offering to make over to the aforesaid merchant, a mining claim for the money. The merchant knew nothing of the man or his claim, but gave him the money and took his bill of sale. He thought no more of the transaction until a few days since, when a stranger called at his place of business and asked him if he was the owner of such a claim. Receiving an affirmative answer, the stranger offered him \$4,000 for the same. The merchant hesitated a moment when the stranger added another thousand to his offer. The merchant immediately closed with his visitor and pocketed the cash without any further remarks. The merchant is still ignorant as to whether he sold a folly or a fortune.

The above paragraph, which we started a few weeks since, has gone the rounds of the press, sometimes credited, sometimes not. One of our mountain contemporaries, the *Messenger*, at La Porte, intimates that we have drawn upon our imagination for the story. Not at all, friend DEWEY. The only mistake we made was in naming the sum paid by the merchant—which should have read \$500 instead of \$150. We have now however, to add a little to the original story, to the effect that another offer of \$8,000 has been made for the same ground. On further enquiry we are enabled to state that the "Merchant" can be seen every day in the week (Sundays excepted) at No. 421 Clay St. The mining stock in question was 20 feet in the Antelope, at Esmeralda, which was quoted at the Stock Board in this city on the 6th of January last at \$95 per foot, and on the 2nd of March, at \$400. A little cyphering will satisfy any one that such a transaction as noticed above, *might* have been made, as indeed it really was.

A NEW BOARD OF BROKERS.—An association of brokers has lately been formed in this city, under the designation of The Stock Exchange, and they hold their first meeting to-day, for the transaction of business. The time of meeting is from 1½ to 2½ o'clock, P. M. Samuel Purdy is President; Isaac Bluxome, Jr., Vice-President; M. G. Elmore, Secretary, and J. H. Bullard, Treasurer. There are now 30 members, and a number of applications have been made by others who propose to join them.

The origin of the Board, as we are informed, was in consequence of raising the price of membership admission in the Stock and Exchange Board. Their first entry-dues amounted to \$100, which were raised to \$250, and are now fixed at \$500. The entry-dues of membership to the new Board will be \$100.

BENEFIT CONCERT.—We notice, by posters, that RISING SUN DIVISION, No. 1, S. of T. of this city, are to give a Benefit Concert, at Dashaway Hall, Post St. on the 12th inst., the proceeds of which are to be appropriated to furnishing their Hall, corner of Clementina and First Sts.

This is one of the most useful and energetic organizations of this description in the State. It is known, *par excellence*, as the "Literary Division." In addition to the usual exercises of such bodies, on alternate evenings of their weekly meetings the members engage in debates, and furnish written essays and compositions, which are embodied into what is called a "Paper." Some of these compositions we have seen, and can fully testify to their excellence. They may rank with first class magazine literature. These exercises are most beneficial, not only upon the members themselves, but upon the entire community in which they move. Such an institution, made up almost exclusively of young men, and ladies, is eminently worthy of support and encouragement, and we trust their Benefit on Thursday Evening next, will be a Benefit indeed.

WHAT NEXT?—A mine of Epsom Salts has been discovered somewhere on this Coast, but where we are unable to learn. The discoverer, however, is willing to incorporate for a reasonable consideration.

## OBITUARY.

We regret to announce the death of JAMES P. CHENEY, son of RICHARD CHENEY Esq. of this city, who died, on Thursday last, at the residence of his Grandfather, Dr. Peck, at Northampton, Mass. aged 19, of a fever contracted in the Chickominy swamps.

We knew him well. He was always generous, brave and kind. A great favorite among his fellows, no party or game of ball was complete without JIMMY.

## STOCK REMARKS.

SAN FRANCISCO, March 9th 1883.

A large amount of business has been done in mining stocks the past week, confined mostly to middle class shares. Fluctuations and fancy have entered largely into operations, and excitement has run higher than at any previous period since the bulls and bears first made their appearance upon the Montgomery pave.

The leading excitement of the week has been the Burning Moscow, and grew out of telegraph reports of an exceedingly rich "strike" in the lead. The chief fancy operations have been confined to the Reese River Co. of which 2400 shares have changed hands at prices varying from \$6½ to \$8½. There need be entertained but little doubt of an ultimate and early advance in this stock.

The Ophir has declared another 48-dollar dividend, with the confident expectations of coming up to the old figure of \$72 at next dividend day.

While Wido West was the subject of considerable excitement on Monday, the stock suddenly rose to \$500, but soon dropped to \$395, and finally closed at \$400, at which it may now be quoted.

Mount Davidson still has an upward tendency.

Chollar has been largely dealt in at considerable advances. Potosi has also further advanced.

Sierra Nevada remains at about last quotations, notwithstanding its triumph over the La Crosse.

## TRANSACTIONS IN SHARES, FOR THE WEEK.

## NEVADA TERRITORY.

Ophir—12 at \$3000, 20 days.  
Gould & Curry—4 at \$3,240.

## REVIEW OF THE WEEK ENDING FEBRUARY 28, 1883.

The preparations necessarily consequent upon the municipal election which took place in Virginia City on Monday last, exerted a somewhat depressing influence on stock operations in that market during the week previous. Although the amount of business done was light, the rates, as a general thing, were materially improved. We note advances as follows:

Union, Gold Hill district, advanced from \$15 on Tuesday, to \$25 on Thursday, but declined again on Saturday to \$22½. This advance is attributable to hopes of success in the suit with the Yellow Jacket. Madison, which had remained quiet for several weeks, found sale on Wednesday at \$18; on Thursday it advanced to \$37½, where it appears to rest quietly—holders firm. The advance in this stock is attributable to the failure of the jury to agree in its suit with the Moscow. Beach & Paxton has advanced from \$50 to \$60, with but little stock offering—holders looking for still higher figures. Gov. Nye is also in considerable demand, and has advanced from \$5 to \$6, per foot, at which latter figure it remains firm. Oriental has advanced a dollar on a share, and is now quoted firm at \$6. Sacramento has materially improved and may be quoted at \$70, with but little in the market. This stock is chiefly held in this city. Hawley, in Spring Valley, which has been very quiet of late, is now again enquired for and quoted at from \$15 to \$20. There has been considerable excitement during the week in reference to the Bullion, growing out of its suit with the Yellow Jacket. Quite a number of "cards" have been published, and holders on both sides are nervous. The ground in dispute is very valuable. Considerable excitement has been created in certain quarters with regard to the Irving, which is chiefly held by one man—Winn, formerly of this city. The workmen upon this ledge are reported to have struck very promising ore, and appearances indicate the approach of a good vein. The principal holder is rating his stock at figures varying from \$25 to \$40 per foot. Winn claims that the Ir-

ving is an extension of the Comstock vein. The idea is probably a harmless fancy. If it should prove true, however, we should be compelled to admit that the ways of Nature are sometimes tortuous in the extreme.

## WASHOE STOCK REMARKS.

[COMPILED FROM THE DAILY TERRITORIAL ENTERPRISE.]

TUESDAY EVENING, February 24th.

There has been less done in stocks to-day than promised yesterday, yet a number of sales are reported. Bullion buyers have not been very abundant to-day. There has been any amount of "sparring" between buyers and sellers, but the result has been no noticeable change in our yesterday's figures. It is firm at \$45, with little in the market. Sacramento is in request at our quotations of yesterday. Ten feet sold to-day at \$66. Zouave is saleable at \$15 to \$16. Fifteen feet sold for \$15½. Dunn is enquired for at \$10; \$12 is asked with few buyers. Union, Gold Hill, is sought for, and the amount of assessments paid—\$15—is freely offered. Considerable is changing hands. There is something doing in Fairview at \$16. Texas is quiet. It may be quoted at \$7 to \$8. Pench and Paxton is advancing, and may be quoted at from \$45 to \$50. Pride of Washoe is saleable at from \$15 to \$20.

WEDNESDAY EVENING, February 25th.

The demand for stocks has been lively to-day, although transfers have not been numerous. Bullion is quiet. It may be quoted at \$40 to \$45. Sacramento is still in request at \$65 to \$70, although little is in market at these figures. Oriental is finding favor, and during the past two days, some 300 feet have changed hands at \$4 to \$5. It is in good request to-day at these figures. Hazel Green is saleable at \$3½ to \$4, to fill orders from below. Dunn is held stiffly at \$10 to \$12, with an upward tendency. Union, Gold Hill, is firm at \$15, with the demand considerably exceeding the supply. Madison has been enquired for at low rates, and a few feet found sale at \$18; \$20 to \$25 is offered, however, without accommodation. Zouave still in demand at yesterday's quotations, with but little in the market. Two or three south extensions of the Bullion, at Gold Hill, have been located, and the mysterious Comstock, on which this claim is supposed to be situated, is being freshly traced to the southward by experts and theorists.

THURSDAY EVENING, February 26th.

Operations in stocks have been neglected to a considerable extent to-day in preparing for the municipal contest of Monday. Madison, owing to the inability of the jury to agree in its suit with the Moscow, advanced to-day from \$20 to \$40, and its tendency is still upward. Fifty or sixty feet changed hands at \$25 to \$37½. Nothing has been done in Bullion. Owing to the card of the owners of the Coppers & Mills, renouncing all claim to the Bullion ledges, the stock is exceedingly firm at \$45 to \$50. Union at Gold Hill, has been extensively purchased during the week, and is now commanding a large advance on previous quotations. It cannot be quoted at less than \$25, although one or two small lots were sold to-day at lower rates. Its hopes of success against the Yellow Jacket seem to be strengthening. The ledge in dispute is of first class value. Gov. Nye is in request at from \$6 to \$7, and is being largely monopolized for the purpose of speculation, it is presumed. Oriental is enquired for at \$4½ to \$5, to fill orders from below. With these exceptions we have no changes of moment to note from our last quotations.

FRIDAY EVENING, February 27th.

There has not been much done in stocks, to-day, although the market is exceedingly active. Bullion is quiet. Ten feet sold at \$42½, fifteen at \$45, and ten as low as \$38. Union at Gold Hill, is still upward in the market, and is inquired for at \$20 to \$25, with little accommodation at these figures. The Yellow Jacket is also enquired for at an advance. The ledge in controversy is one of the best in the Territory. Beach and Paxton is meeting with considerable favorable comment. \$50 is offered for it, without takers. This company has filed its papers of incorporation, Madison is offered at \$35 to \$40, with little dealing at these rates. Harrison has advanced a shade in consequence of the suit, and may be quoted at \$6 to \$7, for locator's title. Very fair looking quartz is being taken from the Irving, and the probability of striking a ledge of value in that claim is brightening. Oriental is in request at an advance of about \$1 on yesterday's quotations.

SATURDAY EVENING, February 28th.

Nothing of special importance has been done in stocks to-day. Inquiry has been free, however, and is quite equal to the demand. Little has been done in Bullion. The "cards," pro and con, in circulation, have affected the prices to something of an extent, and buyers and sellers are nervous. It may be quoted at \$40. Union, Gold Hill, has been dealt in to-day at our quotations of yesterday. 40 feet changed hands at \$20 to \$25½. This stock shows indications of an advance. Yellow Jacket can be sold at \$210 to \$225, for accepted title, but it is obtained with difficulty in this market. Oriental is advancing, for some reason—proximity to a ledge, we are informed. It is in request at \$5½ to \$6, with little disposition to sell at those figures.—Beach & Paxton is saleable at \$60, with little or none in the market. Peytona is enquired for at \$35 to \$40. It is obtained with difficulty, and might probably, be sold for \$40. Madison is offered for \$25 to \$30. There is little doing in Geller or La Crosse. Hawley, in Spring Valley is looking up, and is reported as having been sold at \$15 to \$20. Hazel Green has advanced a shade in consequence of favorable indications. It may be quoted at \$4.

## ESMERALDA STOCK LIST.

if this was the case, the film was so small as not to be perceptible."

## [REMOVING AMALGAM AND CLEANING OUT ARRASTRES.]

'*Raspando*' (scraping) is the name given to the operation of removing the amalgam of silver and gold from the arrastres. It is done as follows. At the end of about every quarter, or sometimes only half-year, according to the quality of the ores being ground, after the arrastres have been discharged, the workmen proceed to scrape all the stuff from the interstices between the stones forming the bottom, which they do with hooked pieces of iron. The stuff removed is a mixture of coarse pieces of stones—are very finely ground—and amalgam of silver and gold. If the arrastre be entirely worn out, the whole bottom is removed and everything well scraped and cleaned, when a new bottom is again put in.

That which has been collected from the bottom is next well washed by hand, in bowls, in a tank filled with water. A certain portion of the stuff to be washed being placed in the bowl, there is then added a small portion of mercury for the purpose of collecting the finer particles of amalgam, and prevent them, as much as possible, from being washed away by the water. The bowl is now moved about in the water in such a way as will best favour the collection of the heavy amalgam and the removal of the lighter or earthy particles which are collected in the bottom of the tank, and is again washed on an inclined plain called a "*Planilla*," so as to obtain as much as possible of the precious amalgam. Still, some of this is in such a fine state of division, from the long-continued action of the grinding stones, that much of it is lost even by the second washing, and no method has yet been invented by which the last traces of this finely divided portion can be saved. The amalgam, after having been collected and cleaned, is freed from as much mercury as possible by being pressed in a leather bag; the dry amalgam is next burned (as we shall describe further on) to expel the remaining portion of the mercury, when an alloy of gold and silver remains. This is next removed to the Government melting and assay office to be melted into bars and assayed, before being sent to the mint to be "*parted*." This alloy is termed "*Plata mixta*" (mixed silver.)

## LOSS OF GOLD.

By this method of grinding there is still a large loss of gold. From 25 to 33 per cent. on the assay may be taken as an average, and it is said by some to be as high as 40 per cent. The whole of this loss has never been satisfactorily accounted for; but there is always a certain portion washed away in the form of very fine amalgam in washing the stuff from the bottom of the arrastres. The silver obtained from the treatment in the patio always contains a certain amount of gold, and the "*Polvillos*," which are the metallic portions (principally sulphides of iron rich in silver) remaining from the washing of a torta, always contain gold. These "*Polvillos*" are treated a second time to retain whatever gold and silver they may hold; but they will not yield them by the common method, without a preliminary operation. I think it quite probable that the gold may exist in these *Polvillos* as a sub-sulphide.

## LOSS OF MERCURY IN THE ARRASTRES.

In many works which treat on this subject it is stated that it is only the native metals that are taken up or extracted in the arrastres, and the "*Asogerros*" (amalgamators) in general think that to amalgamate any quantity of the precious metals an equivalent weight of mercury must be sacrificed. It is, however, very evident that in the arrastres the mercury actually acts on the sulphide of silver, forming metallic silver and sulphide of mercury. The following gives the details of an actual result obtained in a reduction works at Guanajuato. The amalgam added to the arrastre was 70 lbs., and was composed of 14 lbs. of silver and 56 lbs. of mercury:—

Additional mercury added during the whole time of grinding (exclusive of above).....	330 lbs.
Mercury in amalgam added.....	56 "
"Plata mixta" (gold and silver) obtained, including the above 14 lbs.....	84 "

Amalgam which ought to have been produced... 470 lbs.  
But there were only obtained 400 lbs., which was composed 84 lbs. of gold and silver (plata mixta) and 316 lbs. of mer-

cury; which, deducted from 386, the total number of pounds added, leaves a loss of 70 lbs. Now the alloy contained 18 lbs. of gold, which being in the metallic state in the ore would combine with the mercury without loss of the latter. Consequently, if we subtract this 18 lbs. of gold from 84 lbs. (the total alloy) there will remain 66 lbs. of silver. Thus we have a loss of as near as can be one pound of mercury for every pound of silver taken up (nearly equivalent proportions,) the difference being easily accounted for by mechanical loss in washing, burning, &c. Again, the ores worked in Guanajuato contain but little or no native silver, the gold only being in that form; so that it can only be the slow reduction of the sulphide of silver, that causes the loss. If the ores ground contain much native silver, then the loss of mercury will be less in proportion. Or, if copper amalgam in place of that of silver be added to the arrastres at the commencement of the grinding, the copper will in a short time disappear, and the loss of mercury will be somewhat diminished.

## SINGULAR AND INTERESTING AMALGAMATING PROCESS.

The reduction of sulphide of silver by mercury is a very curious fact, and one which I believe has been pointed out before. Still the following statements may be interesting. I took a small piece of pure red sulphide of silver and ground it dry in a clean porcelain mortar for about ten minutes with a small portion of mercury. At the end of this time the mercury contained a considerable quantity of silver, which could only have come from the reduction of the sulphide. In conducting this experiment, it is curious to note that after having ground the two substances together for a few seconds, the whole of the sulphide of silver apparently disappeared, and the mercury had all the appearance of being highly charged with silver (of amalgam) and spread itself in the form of a paste round the interior of the mortar; but on adding water to wash out what we thought was a pure amalgam, we were disappointed at finding the mercury again assuming the globular form, having only taken up a small portion of the silver, whilst the remaining undecomposed sulphide of silver mixed with the water. This circumstance, I think, can only be explained by the mercury actually dissolving the sulphide of silver, which apparently can only take place in the dry state.

[TO BE CONTINUED.]

**COPPER SPECIMENS.**—We acknowledge the reception of some very fine specimens of copper ore—green carbonate—showing much native copper, from Mr. GEO. W. HODGKINS, of Taylor's Ranch, (Indian Valley.) The lead is located about 14 miles from the Valley, and was discovered in June last. The company, known as the "Mountain Meadow Copper Mining Co.," are now running a tunnel, which has already been driven 125 feet into the hill, for the purpose of thoroughly developing the lead. The specimens before us are certainly indicative of a very rich mine.

**GOLD NEAR BROOKFIELD, MASS.**—We clip the following from the Hampshire Gazette; Mr. Trusdell, of Warren, has discovered something approximating to a gold mine, on the road between Warren and Brookfield. He has six or eight men engaged upon a vein of rock, which somewhat resembles the quartz of California and contains some kind of ore. It is very hard and much heavier than ordinary rock. Very many people have been attracted to the spot; but, as Mr. Trusdell holds possession of the mine, if it be one, there is not much chance for others to stake off claims at present. Those at work upon the vein are confident they have struck a gold bed.

**TREASURE BY THE GOLDEN AGE.**—The amount of treasure shipped by the steamer Golden Age, Monday, was \$872,304 31, consigned as follows:—

To England.....	\$711,742 66
To New York.....	154,561 65
To Panama.....	5,000 00

**RICH ORE.**—Some rich specimens of silver ore from the Sheba and Ben Franklin leads, Humboldt District, may be seen at the office of H. Critcher, Stockbroker, 211 Montgomery St., and at Mr. W. P. Denkla, 608 Montgomery St. at Kenney & Alexander's Bookstore. They are a portion of the specimens alluded to in our Editorial notice of the Humboldt mines.

## Mining and Scientific Press.

The MINING AND SCIENTIFIC PRESS is published at the Exchange Building, Room 27, corner of Battery and Washington streets San Francisco, Cal., at FIFTY CENTS per month, or \$4 per annum, in advance.

C. W. M. SMITH and W. B. EWER, - - - - - Proprietors.

## Engravings, Electrotypes, etc.

We execute at this Office Engravings and Illustrations on wood, stone, copper, steel, etc. STEREOGRAPHY and ELECTROTYPING. Designs of every description—Buildings, sketches of Towns, Machinery, Stamp Dies, Seal for Plain or Colored Printing. Job Work executed with dispatch at low rates. PATRONS will remember that when we execute engravings we will insert them free of charge in the MINING AND SCIENTIFIC PRESS, thus giving the advantage of a Wide Circulation throughout the Pacific Coast in the best Advertising Medium to be found in the country.

## To Printers.

AN INTEREST in one of the most flourishing and best paying Newspaper Offices in the mountains is offered for sale on easy terms. A rare opportunity is hereby presented to any printer desirous of establishing himself in a good business in one of the healthiest, most thriving and delightful mountain towns in the state. For further information enquire at this office.

**SUBSCRIBE.**—Are you a miner and not a subscriber to the MINING AND SCIENTIFIC PRESS? If so, you are an annual loser of many times the price of a year's subscription, particularly if you are engaged in quartz mining. The same amount of practical information, important to miners and mechanics, which is contained in a volume of the Press, cannot be bought from the shelves of any bookstore in the country for the price of several year's subscription. Do you ever send a paper to the "Old Folks at Home?" If so, and you desire to send important information and valuable reading matter, you can find no paper that will be read with so much eagerness by them, or one that will convey to them so full an account of the real industry of the country as the MINING AND SCIENTIFIC PRESS. We invite all to send us their names and four dollars, or two dollars for six months, and become patrons of the only mining paper printed on the Pacific coast. Those who receive a paper with this paragraph marked may understand that it is sent to them for examination, and with the hope that it may so far meet with their approval as to warrant their subscribing for it at once. It is not our usual custom to receive a subscriber for less than six months; but inasmuch as we are anxious to introduce the paper where it is not now known, we will, for the present, send the Press for three months even, on the receipt of one dollar, in coin or stamps. It is our belief that no one will wish to discontinue the paper after being a constant reader of it for even that short period.

## SUGGESTIONS ABOUT FOREIGN PATENTS.

American inventors should bear in mind that, as a general rule, any invention which is valuable to the patentee in this country, is worth equally as much in England and some other foreign countries. Four patents—American, English, French and Belgian—will secure an inventor exclusive monopoly to his discovery among one hundred millions of the most intelligent people in the world.

The facilities of business and steam communication are such, that patents can be obtained abroad almost as easy as at home. The majority of all patents taken out by Americans in foreign countries are obtained through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. Having established agencies at all the principal European seats of Government, we obtain patents in Great Britain, France, Belgium, Prussia, Austria, Spain, etc., with promptness and dispatch.

Models are not required in any European country, but the utmost care and experience is necessary in the preparation of the specifications and drawings.

When parties intend to take out foreign patents, engravings should not be published until the foreign applications have been made.

**CAUTION.**—It has become a somewhat common practice for agents located in England to send out circulars soliciting the patronage of American inventors. We caution the latter against heeding such applications as they may otherwise fall into the hands of irresponsible parties, and thus be defrauded of their rights. It is much better for inventors to entrust their cases to the care of a competent, reliable agent at home.

While it is true of Most European countries that the system of examination is not so rigid as that practiced in this country, yet it is vastly important that inventors should have their papers prepared only by the most competent solicitors, in order that they may stand the test of a searching legal examination; as it is a common practice when a patentee finds a purchaser for his invention, for the latter to cause such examination to be made before he will except the title.

It is also very unsafe to intrust a valuable invention to any other than a solicitor of known integrity and ability. Inventors should beware of speculators, whether in the guise of patent agents or patent brokers, as they cannot ordinarily be trusted with valuable inventions.

LOWER CALIFORNIA

Colonization and Mining Company.

THE AGENTS SENT TO MEXICO BY the above Company having returned per steamer Oregon; after having secured a tract of upwards of

**125,000 Acres**  
OF RICH AGRICULTURAL LAND,  
and a valuable silver Mine,

The Company is now prepared to furnish exact information to Colonists who have already engaged, or those about to engage in this

SPLENDID ENTERPRISE.

It proposes to send a vessel about the first of March next, and there being but a limited number of shares

NO TIME SHOULD BE LOST BY COLONISTS.

Farmers Miners and Mechanics,

With families are particularly invited by the authorities of the Territory. The land selected, in point of fertility of soil, is not excelled on the Continent. The climate is unsurpassed in the world. The richest Silver Mines known to exist in the Territory are in the immediate vicinity and bordering on the agricultural lands of the Colony.

N. B. Bear in mind that a share costs, at present, only \$200, which entitles the holder to free transportation for self, family, and articles of personal use and an equal share in the land, the Company's Silver Mine, etc. the whole enterprise, being for the mutual benefit of members only.

Full information can be had, and Mineral and Cotton Specimens seen, by applying at the Office of the Company, North-west corner of Clay and Front Street.

BOARD OF TRUSTEES.

A. G. RANDALL, President.  
CAPT. JOHN H. BELL, V. President.  
O. F. GEHRKE, Secretary.

Trustees.—L. F. LOWLAND, ISAAC TAYLOR, M. D. MATHEWSON, H. C. PATRIDGE, I. ROWELL, M. D.

Attention! Attention!

A TRACT OF LAND, EMBRACING AN AREA OF 400 Acres has recently been surveyed and plotted out into lots, which are now offered for sale on reasonable terms as any ever offered by the various Homestead Associations in our city. The tract is known as the "University Mound Survey," and derives its name from the fact that the Directors of the University College have selected a site of about twenty acres in the centre of the tract for their College Building and Park. This property is more beautiful than any other ever offered in this market, and its location is such that it must in the natural progress of improvement soon be in great demand for places of residence. That this property will increase in value, is as certain as the future of San Francisco.

Investments in Real Estate, it is well known, have paid as largely as any other, and insurance against risk of depreciation in value is secured by the sure and rapid increase of our population.

Invest in Real Estate, and you will find it more profitable than investing in wild-cat mining stock, or loaning money that may be paid in depreciated currency.

The prices for lots in the above tract will remain uniform until after the holidays—that is, without interest. The title to the land is perfect.

CHINA NUT OIL,

POLAR OIL,

LINSEED OIL, Raw and Boiled,

SHARK'S OIL,

NEAT'S FOOT OIL,

TANNERS OIL, ETC.

Our customers in particular, and the country trade generally, are requested to ascertain our prices before purchasing from traveling agents, as we will sell at less rates than they can afford to. apl6f

50 lbs. MARINE AND

Fire-Proof Paint,

MANUFACTURED BY THE PACIFIC METALLURGICAL Works in this city, for Hulls and Decks of Vessels, from ground Mineral Rock contains Arsenic, Copper, Litharge and six other Minerals. When used on the Decks or Bottoms of Ships, it is equal to a coat of Stone, and quite equal to Copper, no worms will ever effect it, and cheaper than any other paint.

DIRECTIONS:

For Decks of Ships, use two parts Mineral Paint, one part White Lead, mix with Linseed Oil.

For Bottoms of Vessels, use one part ground sulphur three parts Mineral Paint, mix with Coal Tar and apply it hot.

For sale by all Ship Chandlers and Tradesmen, in boxes of 50 lbs. each, or by the Pacific Metallurgical Works.

25 POUNDS FIRE-PROOF PAINT.

When used on Roofs, Buildings, or Fences, it is equal to covering them with a coat of Stone, being perfectly Fire Proof, and costing less than any paint.

DIRECTIONS:

HOUSE.—Mix three parts Mineral Paint with one part white lead, thin with Linseed oil: if a lighter color is wanted, mix less paint, more lead.

ROOF.—Five parts of Mineral Paint, one part white Lead; mix with Linseed oil. Put it thick on a tin Roof as one coat when properly applied will last three years.

S. C. BRADSHAW, Agt.,  
G. T. FOUQUE, Superintendent.

WORKS, North Beach; Office, 318 California st., San Francisco.

WRIGHT'S PICKS.

JOHN WRIGHT, of Sacramento, has established himself in San Francisco for the manufacture of every description of PICKS, of the best material, at reduced prices. PICK EYES of the best iron furnished in any quantity, at low rates. Orders from the country promptly attended to. N. B.—None genuine unless stamped with my name.

JOHN WRIGHT, 611 Market street,  
Opposite Battery, San Francisco.

REMOVAL.

OFFICE OF THE PACIFIC METALLURGICAL Office is removed to 318 California street. Having enlarged our Works at North Beach, we are now enabled to reduce from 10 to 15 tons of Silver or Gold rock per day.

Gold and Silver ore, and Sulphuret Assayers', or Silversmiths' sweepings reduced or purchased.

COPPER ORES.—Highest market prices advanced in cash, for shipments. S. C. BRADSHAW, Agent,  
318 California street, near Sansome, up stairs.

## SPECIAL NOTICE.

**OFFICE OF OPHIR SILVER MINING CO.,** San Francisco, March 6th 1863.—A dividend on the capital stock of this Company has been declared, payable on and after the 9th inst. The transfer books will be closed from this date until the 9th inst.

mar6 THOS. J. LAMB, Secretary.

## New Style of Lady's Buckle.

W. BOHM, INVENTOR & PATENTEE

THE SUBSCRIBER HAVING OBTAINED LETTERS PATENT from Washington for an improvement in the construction of Ladies' Buckles, is now ready to furnish the same in every variety of style. This buckle possesses several very important improvements over any other in use.

The invention having been carefully examined at the Patent Office, has been adjudged to be a useful improvement, and Letters Patent have been granted for 17 years. It excels all other buckles in

## Usefulness, Strength and Appearance.

The Public is respectfully invited to call and examine this Buckle at the Jewelry Establishment of

BRAVERMAN & LEVY,  
621 Washington Street, San Francisco.  
JOSEPH, BROTHERS,  
607 Montgomery Street, San Francisco.  
FLOBERG & CONRAD,  
118 1 Street, Sacramento.

Every Buckle sold will be guaranteed as to its Strength and Durability. W. BOHM, Patentee.

## Instruction in Assaying, Etc.]

A SCIENTIFIC AND PRACTICAL CHEMIST NOT HAVING the whole of his time occupied with his present business, is prepared to teach the various branches of Chemistry and Metallurgy, is willing to teach the method of assaying Gold, Silver and Copper, alone, or to teach the regular systematic course of Qualitative or Quantitative Chemistry

Address, T. P.  
Post Office, Box No. 167.

**WANTED** by an Intelligent and active young man a Situation by which he may obtain an honest livelihood. He is about 18 years of age, and is a good penman. Enquire at this office.

## Miners' Foundry

—AND—

## MACHINE WORKS,

First St., between Howard & Folsom,  
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the Best and Most Economical, manufactured in the state of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

STEAM ENGINES AND BOILERS, FLOUR, SAW AND QUARTZ MILL MACHINERY, MINING PUMPS, AMALGAMATORS, RETORTS, ETC., ETC.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

\* Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

San Francisco, February 23, 1863.

No. 621 Washington Street,  
Facing Maguire's Opera House  
Dec 29 1m

## WHEELER'S

## Amalgamating and Separating Pans.

It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metals arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the trituration this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals over its competitors, as well as a still larger percentage in the amount of work performed.

\* These Pans can be seen in daily operation, at the Miner's Foundry, on First street in this city, where all interested are invited to call and examine for themselves.

VOL. VI.

SAN FRANCISCO, MONDAY EVENING, MARCH 16. 1863.

NO. 20.

The accompanying engraving is a very correct and well executed illustration of "POND'S PATENT QUARTZ CRUSHER," of which we have hitherto made several notices. This is one of the most original conceptions in the line of quartz crushing machinery, which has ever been introduced to the public, since the first application of the original, ironbound wooden stamps. Mr. Pond has gone back to first principles and produced a machine, involving the most economical use of power, and combining at the same time simplicity and cheapness of construction, efficiency of action, compactness and lightness of metal, etc., which places it in most favorable contrast with anything of the kind heretofore introduced.

The production of this machine has not been the result of a casual thought, but of long continued study and most diligent practice and experiment. The inventor has had the advantage, in these experiments, of several years experience as a quartz miner, and a thorough practical education. He has nearly worn out his original working model, which, as an experiment, was but imperfectly constructed, in studying its principles, and testing, in the most thorough manner, every part and parcel of the machine, until he has at length produced one wherein he can devise no improvement, or discover any defect. We have watched with much interest the gradual development of the present machine, as piece by piece, it has come from the hands of the workmen, each part carefully studied and improved from the original model, until its completeness was reached, and the machine set in motion at the Miners' Foundry, in this city, where these machines are now being constructed. We should have given a full description of it at an earlier day, but we have been waiting for the accompanying illustration, by the aid of which we might be able to give our readers a more clear understanding of the principles of the machine.

#### THE ILLUSTRATION.

The above illustration represents the machine with a portion of its side casing removed. When it is ready for operation it is closed as tightly as possible on all sides except on the right hand in the engraving, marked J, where a screen of any required fineness is placed. When the rock is to be crushed dry, this screen, or rather that end of the machine is fitted into a tight box of any required dimensions, for receiving the pulverized quartz which finds its way through the meshes of the screen in the shape of an impalpable powder.

A A is the bed plate upon which the machine is constructed,

POND'S PATENT QUARTZ CRUSHER.

ed, B being a movable die, fitted into the bed-plate, against which the hammers strike, as seen in the lower one in the engraving. To the shaft D is firmly fastened a massive center piece, E, which is cast with jaws or grooves for the arms F, F, F, they being held in their places by bolts as at L. The shanks of the hammers H, H, H, are held in their places by hardened steel bolts at G, G, G, and so constructed that they can move backward after striking the die B, pass freely over it, and immediately by their centrifugal force fly out into position as represented in the engraving.

On the face of each Hammer is fastened a Shoe, I, made either of cast or wrought iron, or steel, and hardened. The Machine when running is entirely enclosed by the sides and rim. The rock is fed into the Box, C, drops immediately in front of the Die, where it is crushed and carried over on to the Screen, J, by the motion and shape of the Hammers, where the fine material passes out, and the coarse returned in front of the Die, is again crushed and thrown over until it is all fine enough to pass out through the Screen, which may be of any required fineness.

The amount this Machine (four foot) will crush is from Twelve to Twenty Tons per Day, depending upon the speed it runs and the power expended. The machine can be used either for Wet or Dry Work. For crushing Twelve Tons per Day it only requires Five Horse power. It is easily

kept in order; the wear and tear being a less cost per ton than in a Stamp Mill.

Great numbers of persons, experienced in quartz crushing, have witnessed the operation of this machine, and so far as we have heard, (and we have conversed upon the subject with many) all have expressed themselves most favorably impressed with regard to its working.

We understand that the machine will soon have a fair trial by the side of one of the mammoth Mills on the Fremont (Mariposa) Estate. Quartz Miners, visiting the city should not fail to call and examine this machine, as well as several improved descriptions of amalgamating pans, which are constantly in operation, every day, at the Miners' Foundry, on First street, where others are in course of construction.

These Machines are so simple in their construction that any one can put them together after they have been transported to the locality for which they are designed. They are made in three sizes, as follows:

A 2-foot Machine	will crush from 2 to 3 tons;	weight 1,000 lbs.	cost \$500
A 3-foot "	" 5 to 8 "	" 3,500 lbs.	cost 750
A 4-foot "	" 12 to 20 "	" 5,500 lbs.	cost 950

The 2 Foot size is for a Prospecting Machine; the other two sizes can be set up at a mill for fifty dollars (exclusive of freight) ready to run.

MELTING STEEL IN LARGE MASSES.—Mr. Alfred Supre, of Paris has discovered, that by covering steel with bottle glass, or the slag of a charcoal smelting furnace, it may be melted in a reverberatory furnace easily and rapidly, and without losing any of its qualities—two tons may be melted at once in the same furnace. Although the furnace in which the experiments were tried was defective, it was found that in consequence of crucibles being dispensed with, and less fuel being required, a considerable economy was effected.

THE ART OF PRINTING.—A jubilee will soon take place in Vienna, in honor of the four hundred years existence of printing in that city. The first Vienna printer, Ulrich Hapn, opened his printing office in 1432, but did not succeed, and emigrated to Rome. He was the cause of the Emperor Frederic IV. bestowing a privilege on the printer, in the year 1468, which placed them in equal rank with noblemen and scholars, and permitted them to wear a sword,

The London Rothschild has had a Carrara marble staircase put in his house at a cost of \$150,000

[FROM THE LONDON "MINING AND SMELTING MAGAZINE."]  
THE MEXICAN METHOD OF AMALGAMATION.

BY JAMES NAPIER, JUN., F. C. S.  
Late Chemist and Assayer to the Guanajuato Mint, Mexico.

[CONTINUED.]

The materials absolutely necessary for the reduction of silver ores in the *Patio* are but few, namely—sulphate of copper, or *magistral*, common salt, chloride of sodium and mercury. But the various modifications introduced have led to the employment of other ingredients, such as precipitated copper, copper amalgam, and fine amalgam.

1.—*Magistral*, or *Sulphate of Copper*.—This is manufactured from the sulphide of copper, mines of which exist in many parts of Mexico; but the district of *Tepezala*, about 18 or 20 leagues southeast of Zacatecas, and about 65 from Guanajuato, perhaps supplies the largest quantities of this ore for the manufacture of the sulphate. The following shows the per centage of copper contained in various samples from this district:—

Copper per. cent.

13.00  
7.47  
13.75  
9.00  
12.50  
10.50  
8.60  
9.40  
8.73

—10.32 mean percentage of copper.

There are many much richer samples found in this locality, but these give a very fair idea of the class of ores generally sent to the various reduction works for the manufacture of the sulphate.
